## CHAPTER 12
## MAINTENANCE INSTRUCTIONS

*This manual together with TM 1-1520-237-23-1, TM 1-1520-237-23-2, TM 1-1520-237-23-3, TM 1-1520-237-23-4, TM 1-1520-237-23-5, TM 1-1520-237-23-6, TM 1-1520-237-23-7, TM 1-1520-237-23-8, TM 1-1520-237-23-9, TM 1-1520-237-23-10, TM 1-1520-237-23-11, TM 1-1520-237-23-13, TM 1-1520-237-23-14, TM 1-1520-237-23-15, TM 1-1520-237-23-16, TM 1-1520-237-23-17, TM 1-1520-237-23-18, TM 1-1520-237-23-19 and TM 1-1520-237-23-20, dated 17 April 2006, supersedes TM 1-1520-237-23-1, TM 1-1520-237-23-2, TM 1-1520-237-23-3, TM 1-1520-237-23-4, TM 1-1520-237-23-5, TM 1-1520-237-23-6, TM 1-1520-237-23-7, TM 1-1520-237-23-8, TM 1-1520-237-23-9, TM 1-1520-237-23-10-1, TM 1-1520-237-23-10-2, TM 1-1520-237-23-10-3, TM 1-1520-237-23-11, dated 1 May 2003 including all changes.

**HEADQUARTERS, DEPARTMENT OF THE ARMY**

**17 April 2006**

## WARNING SUMMARY

Personnel performing operations, procedures, and practices which are included or implied in this technical manual shall observe the following warnings. To disregard these warnings and precautionary information can cause serious injury, death, or an aborted mission.

## WARNING

**FIRST AID -** refer to FM 4-25.11.

**AC POWER -** before applying ac power to the helicopter, make sure that the area around the stabilator is clear of personnel and equipment. Should the stabilator be in any position other than trailing edge fully down, it may reposition automatically to fully down when ac power is applied.

**CARBON MONOXIDE -** during cold weather operations when preheating is necessary, all personnel shall become acquainted with the various types of heaters and where they are to be used. Be careful of accumulations of carbon monoxide and damage to heat-sensitive equipment.

**CONSUMABLE MATERIALS -** observe all cautions and warnings on the containers when using consumables. When applicable wear necessary protective gear during handling and use. If a consumable is flammable or explosive, MAKE SURE consumable and its vapors are kept away from heat, spark, and flame. MAKE SURE helicopter is properly grounded and firefighting equipment is readily available for use.

**SAFETY PINS -** make sure all safety pins are installed in ejector racks prior to performing any maintenance. To disregard this warning can cause serious injury, death, or an aborted mission.

**ELECTRICAL GROUNDING OF THE HELICOPTER -** army regulations require the grounding of the helicopter when doing all fueling and defueling operations. Do not operate helicopter electrical switches, except those essential for servicing during fueling and defueling. Do not smoke or use flame during fueling and defueling operations.

**HIGH VOLTAGE -** there are dangerous voltages in the helicopter. Use extreme care when working with equipment having these voltages.

**HYDRAULIC SYSTEMS -** there are dangerous high hydraulic system pressures in the helicopter. Use extreme care when working on systems having this pressure.

**USE OF FIRE EXTINGUISHER -** when fire extinguishers are used in a confined area, ventilate immediately. Serious injury or death could result if the area is not ventilated or the user does not use a self-contained breathing device.

**MAIN ROTOR PYLON SLIDING COVER -** when opening and closing main pylon sliding cover, keep hands away from sharp edges near track, mating end, and especially ventilation blower inlet hole.

**TECHNICAL ACETONE -** is extremely flammable and toxic to eyes, skin, and respiratory tract. Wear protective gloves and goggles/face shield. Avoid repeated or prolonged contact. Use only in well ventilated areas (or use approved respirator as determined by local saefty/industrial hygiene personnel). Keep away from open flames, sparks, hot surfaces or other sources of ignition.

**ALKALINE AQUEOUS CLEANER -** alkaline cleaner is harmful to skin and eyes. Use adequate ventilation. Operators should wear protective gloves, aprons, and goggles. Upon contact with cleaning compound, wash affected area for at least 20 minutes with clean water. Seek medical attention.

**CLEANING COMPOUND SOLVENT -** cleaning Compound Solvent is combustible and toxic to eyes, skin, and respiratory tract. Wear protective gloves and goggles/face shield. Avoid repeated or prolonged contact. Use only in well-ventilated areas (or use approved respirator). Keep away from open flames or other sources of ignition.

**ELECTRON -** use electron in well ventilated area only. Avoid prolonged breathing of vapors. Avoid bodily contact. The use of chemical gloves and chemical splash goggles are required. Do not use near heat, spark or flame. This solvent is reactive with acids and oxidizers; do not mix or cross-apply with other chemicals. Organic vapor respirator with dust and mist filter is recommended when solvent is spray applied. Keep containers closed between applications.

**-** Provide mechanical ventilation if used in confined spaces. Coordinate the use of this material with your supporting industrial hygiene and safety offices. Ensure you read and understand the material safety data sheet (MSDS) for electron prior to use.

**ISOPROPYL ALCOHOL -** isopropyl alcohol is a volatile and flammable liquid which must be kept away from flame and other ignition sources. It must be used only in well ventilated area. Personnel must wear protective gloves and eye protection. Excessive inhalation of vapors or contact with skin must be avoided. If contact occurs with eyes or skin, flush area thoroughly with water. If ingestion occurs, induce vomiting and call a doctor. Remove to fresh air if overexposed to vapor.

**DS-108 -** use in well ventilated area. Avoid breathing vapors. Organic vapor respirator with dust and mist filter is recommended. May be harmful by inhalation, ingestion, or skin absorption. Avoid bodily contact. Chemical safety glasses/ goggles and chemical resistant gloves are required. Combustible, keep away from heat, spark, or flame. Vapors are heavier than air and may travel over a distance to an ignition source and then flash back. Do not mix or cross apply with other chemicals.

**LOCKWIRE -** in critical applications use lockwire instead of safety cable which is specifically prohibited from use in critical applications. The use of safety cable is restricted in these specific applications with a warning.

**PURPOSE OF A WARNING -** alerts personal to operation, procedure, practice, etc., which if not strictly observed, could result in personal injury or loss of life.

# AVIATION UNIT AND INTERMEDIATE MAINTENANCE FOR ARMY MODELS UH-60A, UH-60L, EH-60A, HH-60A AND HH-60L HELICOPTERS

## CHAPTER 12 MAINTENANCE INSTRUCTIONS

TM 1-1520-237-23-12, 17 April 2006, is updated as follows:

1. File this sheet in front of the manual for reference.
2. This change results from updated procedures for maintenance, checks and services, and/or updated lists of expendable/durable supplies and materials.
3. New or updated text is indicated by a vertical bar in the outer margin of the page.
4. Added illustrations are indicated by a vertical bar adjacent to the figure number. Changed illustrations are indicated by a miniature pointing hand adjacent to the updated area or a MAJOR CHANGE symbol and a vertical bar adjacent to the figure number.
5. Remove old pages and insert new pages as indicated below.

| Remove Pages | Insert Pages |
|---|---|
| a and b | a and b |
| A and B | A and B |

6. Replace the following work packages with their revised version.

Work Package Number

# HELICOPTERS

## UNIT LEVEL

## AIRCRAFT GENERAL

## LUBRICATION REQUIREMENTS

### INITIAL SETUP:

NA

### LUBRICATION REQUIREMENTS

#### Scope

This section contains lubrication procedures. Lubrication intervals may be dependent upon environmental conditions or specific time intervals. When unusual local conditions of environment, utilization, mission, experience of flight crew and maintenance personnel, or periods of inactivity, etc., are encountered, the Commander or Maintenance Officer will, at his discretion, increase the scope and/or frequency of lubrication to be sure of safe flight

#### Work Platforms

Work platforms located on engine cowlings provide access to the engines. Each platform is capable of supporting a static weight of 400 pounds

1. Clean old lubricant from bifilar with machinery wiping towel, Item 344, WP 1803 00.

### CAUTION

Do not allow any lubricant to contact the elastomeric bearings. Any contact may seriously degrade the life of the rubber in the bearing. If contact occurs, rinse immediately with clean soapy water.

### NOTE

In dry sandy climates, use solid film lubricant, Item 180, WP 1803 00, on biflar moving parts and contacting surfaces. In salt water/spray environment, use a light coat of general purpose grease, Item 136, WP 1803 00, on tapered washers.

2. Apply general purpose grease, Item 136, WP 1803 00, to bifilar bushings, pins, and washers (Figure 1).

## EVERY 10 HOURS. SANDY AND DUSTY OPERATIONS

### CAUTION

Do not allow solvent to contact the elastomeric bearings. Any contact may seriously degrade the life of the rubber in the bearings.

### NOTE

It may be necessary to disassemble the bifilar weight system to remove all old grease from all of the bifilar moving parts and contacting surfaces.

1. Clean general purpose grease from bifilar with cleaning compound solvent, Item 71, WP 1803 00, followed by isopropyl alcohol technical, Item 170, WP 1803 00, wipe.
2. Apply light coat of solid film lubricant, Item 180, WP 1803 00, to bifilar bushings, pin and washers. Repeat every 10 hours of flight in areas where lubricant is depleted. Before re-application in those areas, wipe bifilar with machinery wiping towel, Item 344, WP 1803 00, dampened with isopropyl alcohol technical, Item 170, WP 1803 00.

**EVERY 10 HOURS. SANDY AND DUSTY OPERATIONS** - Continued

3. To remove buildup or completely remove solid film lubricant, use cleaning compound solvent, Item 74, WP 1803 00. Before re-application in needed areas wipe bifilar with machinery wiping towel, Item 344, WP 1803 00, dampened with isopropyl alcohol technical, Item 170, WP 1803 00. Solid film lubricant shall be removed before returning to use of general purpose grease.

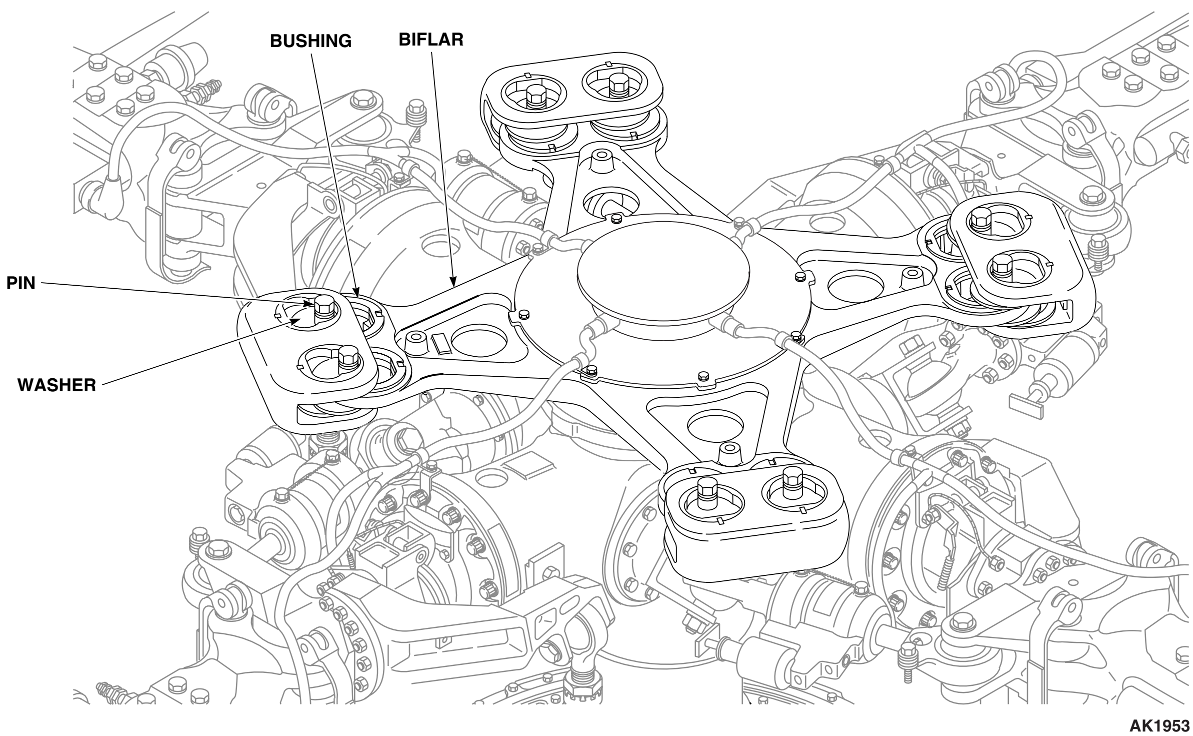

Figure 1. Lubricate Bifilar.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## LUBRICATE SWASHPLATE

**This WP supersedes WP 1661 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic’s Toolkit, 5180-99-B01
Torque Wrench, 150 - 1000 in. lbs.
Grease Gun, Hand Operated

**Material/Parts**
Grease, Aircraft, Item 131, WP 1803 00

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 1803 00

### EVERY 360 HOURS/12 MONTHS

## CAUTION

- Lubricate swashplate every 360 hours or 12 months, whichever comes first. More frequent lubrication, or using too much grease, will not improve bearing life and will cause helicopter to be sprayed with grease.
- Do not try to remove the bearing shield from the bearing retaining ring. Damage to the bearing shield/bearing retaining ring will result. The shield and ring are bonded together to form one part.

1. Turn main rotor head until red index marks on rotating and stationary swashplates line up. Engage gust lock.

## NOTE

33 bolts must be removed from inner bearing retainer ring in order to gain access to bearing seal.

2. Remove bolts and washers holding inner bearing retainer ring to swashplate (Figure 1).
3. Slide retainer ring to one side so upper bearing seal can be seen.

## CAUTION

Damage to bearings will result if pressure lubrication system is used to lubricate bearings. Use only hand-operated lubricating gun.

## NOTE

For replacement swashplate assemblies built-up over 12 months prior to installation, lubricate swashplate until approximately 5 cubic inches of grease has been purged from upper and lower bearing seal at each grease fitting (approximately 20 cubic inches total).

4. Lubricate bearings through four fittings on rotating swashplate with hand-operated lubricating gun using aircraft grease, Item 131, WP 1803 00.
5. Stop lubricating when grease seeps out of either upper or lower bearing seal (normally within 10 inches of fitting).

**EVERY 360 HOURS/12 MONTHS** - Continued

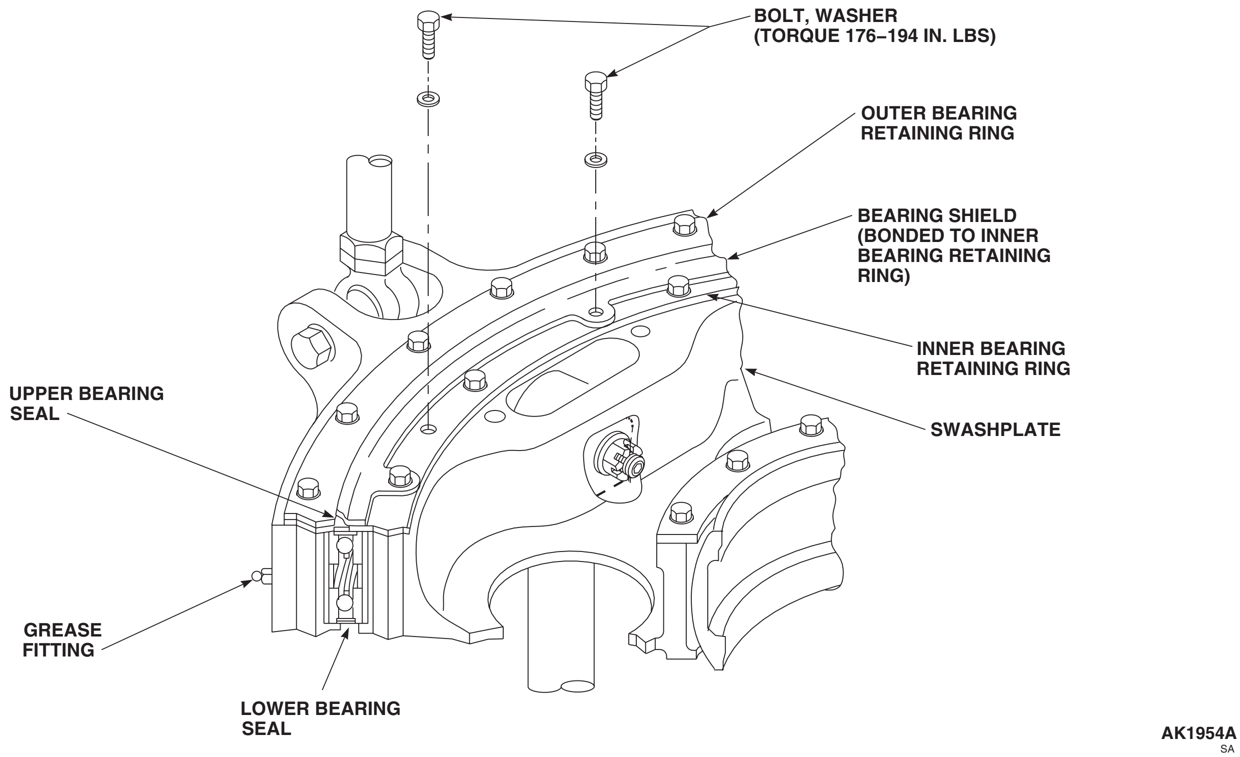

Figure 1. Lubricate Swashplate.

6. Wipe off extra grease in seal area.
7. Install retainer assembly by aligning red index marks and securing with bolts and washers. Make sure all 9 tabs of shield receive a bolt. **TORQUE BOLTS TO 176 - 194 INCH-POUNDS.**
8. Release gust lock.

**References**
WP 0288 00
WP 0291 00
WP 1803 00

## EVERY 40 HOURS OR 30 DAYS

### CAUTION

Damage to main and tail landing gear shock strut seals will result if shock strut pistons are not kept clean and lubricated. Shock struts will leak fluid if seals are damaged. Make sure shock strut pistons are clean and lubricated.

1. If required, remove upper main landing gear fairing to access main landing gear shock strut piston (WP 0288 00).
2. If required, remove access panel on left or right side of tailcone to access upper tail strut exposed cylinder (WP 0291 00).
3. Wipe exposed portion of main and tail landing gear shock strut pistons with machinery wiping towel, Item 344, WP 1803 00, dampened with petroleum base hydraulic fluid, Item 145, WP 1803 00.
4. If removed, replace upper main landing gear fairing (WP 0288 00).
5. If removed, install access panel on left or right side of tailcone (WP 0291 00).

**END OF WORK PACKAGE**

## AIRCRAFT GENERAL

## TOW HELICOPTER

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
Assistants - (4)
UH-60 Helicopter Repairer MOS 15T (2)

**References**
WP 1676 00

### TOW HELICOPTER

#### CAUTION

Damage to tail landing gear will result, if helicopter over 16,825 pounds gross weight is towed with tail landing gear swiveled 180 degrees underneath tail cone. Do not tow helicopter with tail landing gear, 70250-13103-042, with tail wheel swiveled under tail cone, when gross weight exceeds 16,825 pounds.

#### NOTE

- The helicopter may be either pushed, or pulled during towing.
- Battery power may be used to level stabilator. However, if battery low light is on, battery power will only be available for APU starting, and external power should be used to operate stabilator.
- Cabin floor panel installation is not required for towing operations.

1. Level stabilator so tow operator can see all around helicopter.
2. Unpin tow bar cross beam from tube, insert axle pins into tail wheel axle holes, and re-pin cross beam to tube (Figure 1, Sheet 1, Detail A).

#### CAUTION

Damage to helicopter will result if tow bar becomes separated from tail wheel. Make sure tow bar is properly secured to tail wheel.

#### NOTE

Release gust lock prior to moving helicopter.

3. Connect tow bar to tow vehicle.
4. On tail wheel place tail wheel lockpin in DISENGAGED position (Figure 1, Sheet 2, Detail A) or in cockpit on upper console, place BAT switch ON. On lower console, PUSH TAILWHEEL switch button to release tail wheel lock. Place BAT switch OFF.

**TOW HELICOPTER** - Continued

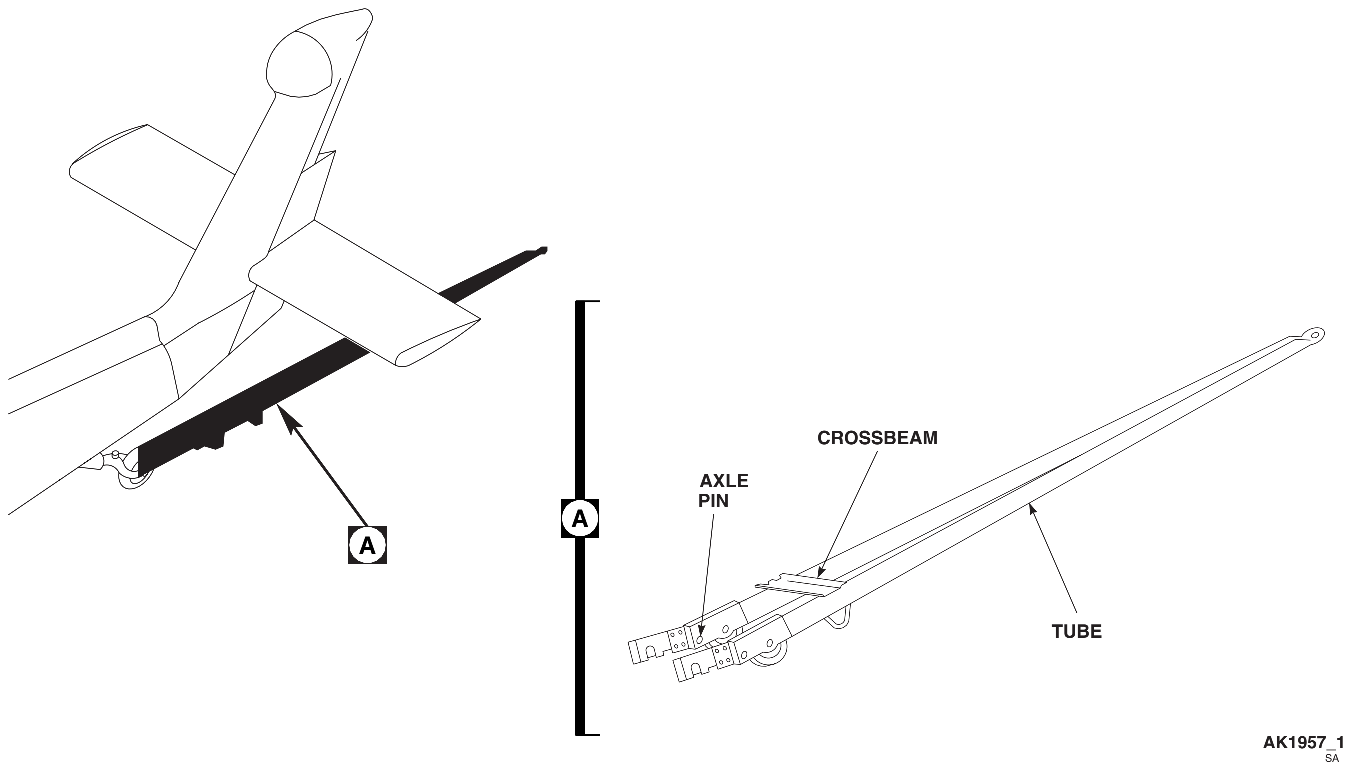

Figure 1. Tow Helicopter. (Sheet 1 of 2)

## CAUTION

Damage to main rotor blades will occur if end of blade is pulled down more than 6 inches below normal drooped position. Do not pull blade down more than 6 inches when installing tiedown ropes.

5. Install main rotor blade tiedown ropes if towing helicopter in a congested area (WP 1676 00).
6. Disconnect any tiedown lines or grounding straps.
7. Have an assistant release parking brakes and ride in cockpit to work brakes.

**TOW HELICOPTER** - Continued

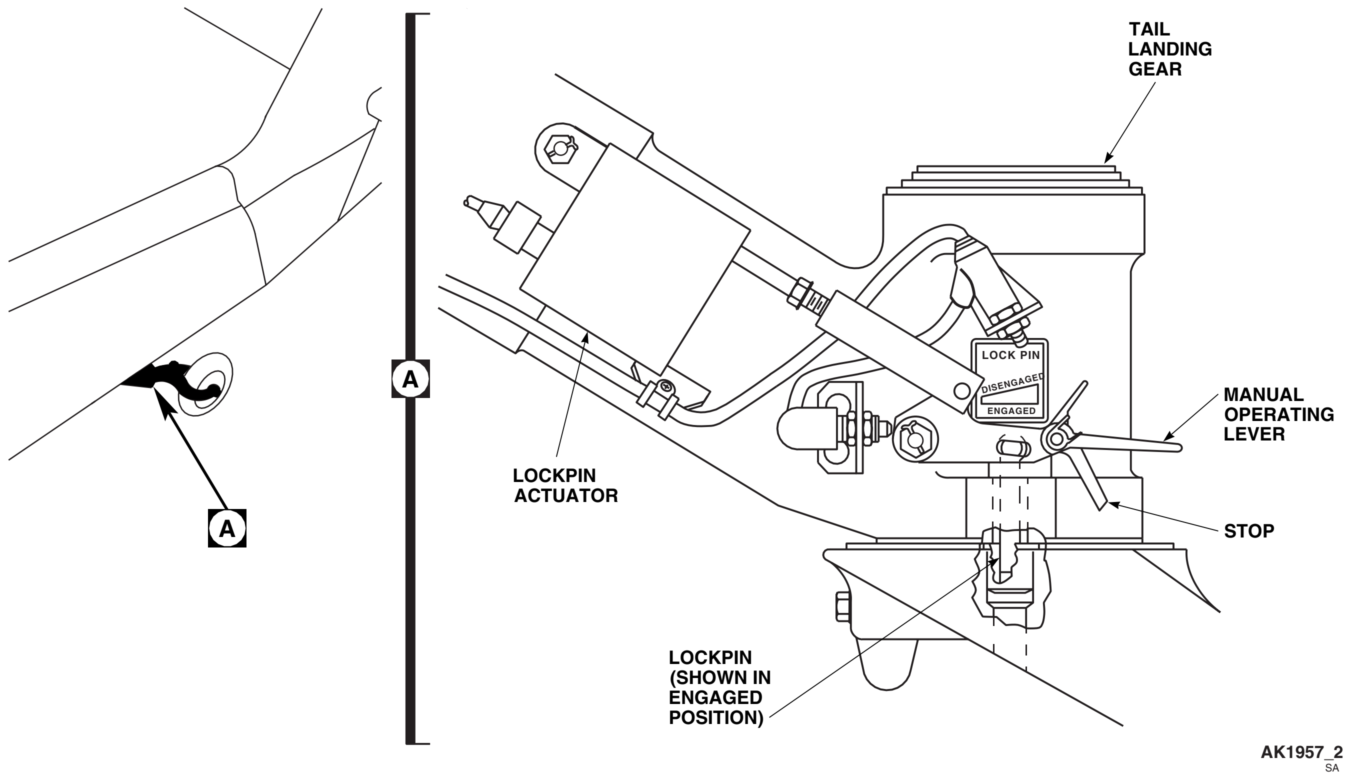

Figure 1. Tow Helicopter. (Sheet 2 of 2)

## NOTE

- Tow only on level surface and do not go over 5 MPH.
- Do not brake to sudden stop when turning; do not make quick starts and stops.
- Have four personnel, one on each blade to watch main rotor blade, tail rotor blade, and airframe clearance when towing and turning helicopter in a hanger area.
- Make sure all external power sources are disconnected and clear of helicopter.
- If possible, wait 20 minutes after removing electrical power from vertical gyro before towing to prevent gyro damage.
- If helicopter is to be towed in a congested area, main rotor blades can be moved using tiedown ropes.

8. Tow helicopter safely, without damage, using these precautions:

   a. Do not release tail wheel lockpin until tow bar is attached to tow vehicle.

   b. Do not release parking brake or remove chocks from wheels until after tow bar is installed, and tow vehicle is attached.

   c. Make sure all engines are off, and both main and tail rotors are stopped.

   d. Check operations of brakes.

**TOW HELICOPTER** - Continued

9. Remove chocks from main wheels and tow helicopter.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## JACK HELICOPTER

**This WP supersedes WP 1675 00, dated 17 April 2006.**

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Landing Gear Jack, 173000-203-4697
Aircraft Mechanic's Toolkit, 5180-99-B01
Hydraulic Tripod Jack, 173000-516-2018

**Personnel Required**
Assistants - (3)
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-1500-204-23
WP 1678 00

### JACK MAIN LANDING GEAR

**WARNING**

- To prevent helicopter from rolling off jacks, make sure parking brake is off, and that chocks are moved as helicopter is jacked.
- To prevent injury to personnel or damage to equipment, do not jack helicopter from one forward hard point. Aircraft must be raised in a level configuration to prevent aircraft side loading and risk of falling off jacks. Severe injury could result if not observed.

**NOTE**

- In addition to these procedures, follow other procedures in TM 1-1500-204-23.
- Normal load for all jackpads is 7,492 pounds.
- Floor panel installation is not required when jacking helicopter.

1. Park helicopter on as solid and level an area as possible (WP 1678 00).
2. Chock helicopter.

**WARNING**

To prevent injury to personnel or damage to equipment engage tail wheel lock pin before jacking helicopter.

3. Place jack beneath jack pad on drag beam (Figure 1, Sheet 1, Detail A).
4. Jack landing gear slowly until tire just clears ground.
5. Slowly lower landing gear to ground. Remove jack.

**JACK MAIN LANDING GEAR** - Continued

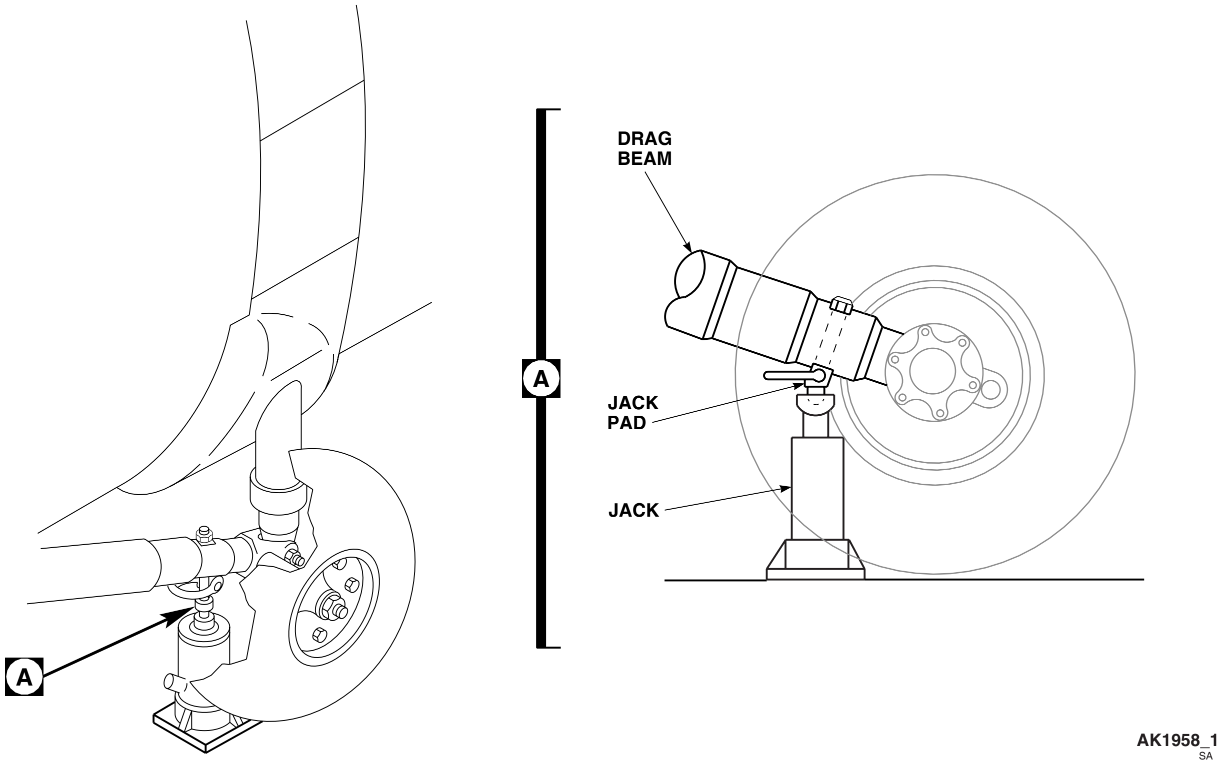

Figure 1. Jack Helicopter. (Sheet 1 of 3)

## JACK TAIL LANDING GEAR

### NOTE

- Normal load for all jack pads is 7,492 pounds.
- Floor panel installation is not required when jacking helicopter.

1. Park helicopter on as solid and level an area as possible (WP 1678 00).
2. Chock helicopter.
3. Place jack beneath jack pad on tail landing gear fork (Figure 1, Sheet 2) or place jack beneath jack pad on tail cone (Figure 1, Sheet 3).
4. Release parking brake.
5. Slowly jack landing gear until tire just clears ground.
6. Set parking brake.
7. Perform maintenance task.
8. Release parking brake.
9. Slowly lower landing gear to ground. Remove jack.
10. Set parking brake.

**JACK TAIL LANDING GEAR** - Continued

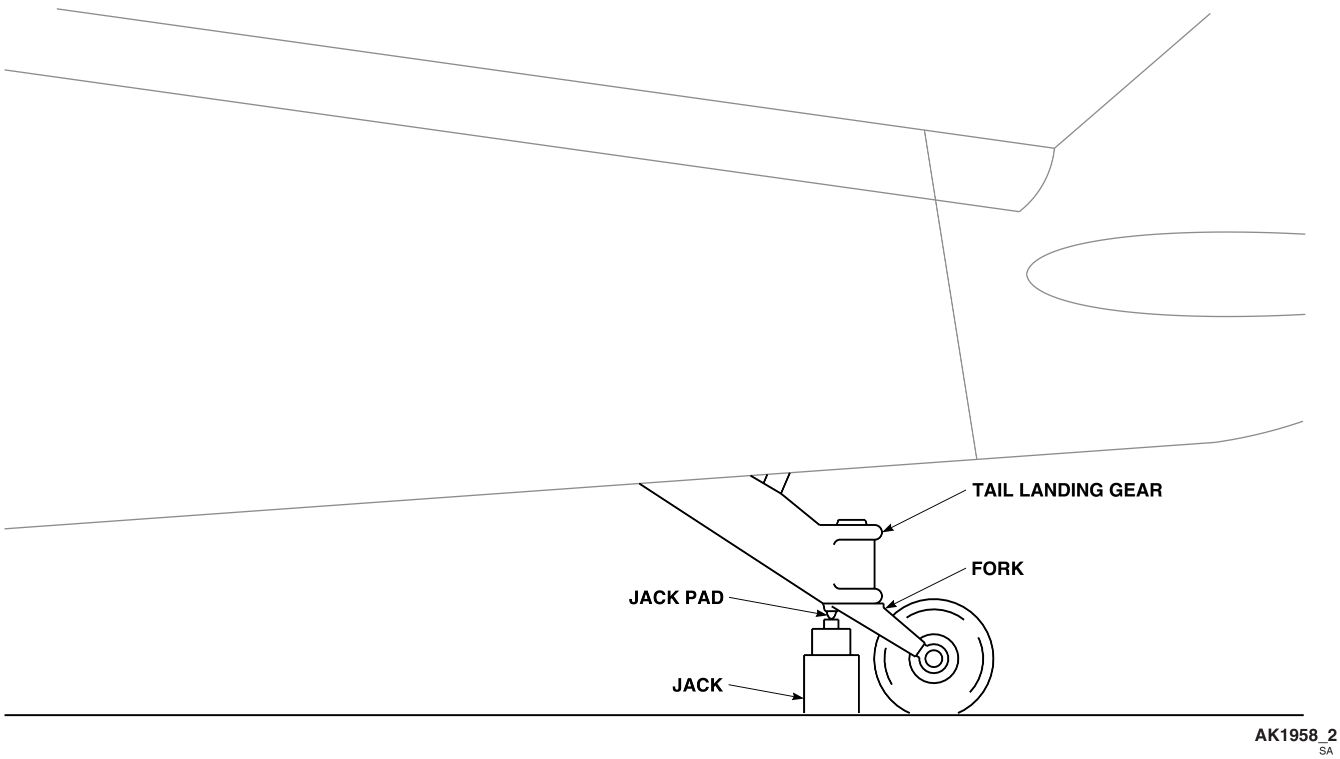

Figure 1. Jack Helicopter. (Sheet 2 of 3)

## JACK ENTIRE HELICOPTER

1. Park helicopter indoors on a solid and level area as possible (WP 1678 00).

### CAUTION

To prevent damaging helicopter, check overhead clearance before jacking.

2. Place jack beneath jack pad on bottom front of each drag beam support, and bottom rear of tail cone (Figure 1, Sheet 3).
3. Hang plumb bob from slot just inside left troop/cargo door above leveling plate (Figure 2, Detail B).

### WARNING

To prevent helicopter from rolling off jacks, make sure parking brake is off, and that chocks are moved as helicopter is jacked.

### NOTE

- In addition to these procedures, follow other procedures in TM 1-1500-204-23.
- Normal load for all jack pads is 7,492 pounds.
- Floor panel installation is not required when jacking helicopter.

4. Release parking brake. Do not remove chocks.

**JACK ENTIRE HELICOPTER** - Continued

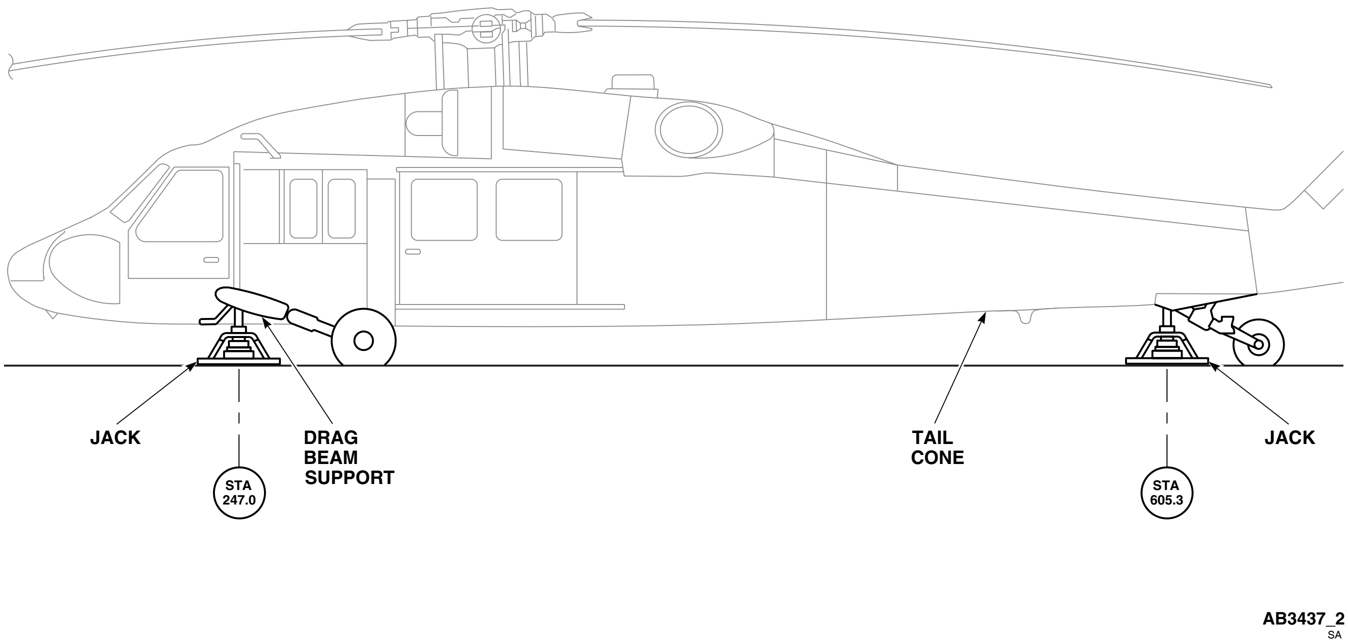

Figure 1. Jack Helicopter. (Sheet 3 of 3)

5. Using three assistants, one for each jack, and one observer, jack helicopter slowly and evenly while adjusting height of jacks to line up plumb bob with intersection of zero marked on outboard edge of leveling plate until desired height is reached, and helicopter is level (Figure 2, Detail A). As helicopter is jacked, move chocks to keep landing gear secured until tires are off ground.
6. Lower helicopter in same manner used to jack it. As helicopter is lowered, move chocks to keep landing gear secured as weight of helicopter comes off jacks. Remove jacks.
7. Lock parking brake.

**JACK ENTIRE HELICOPTER** - Continued

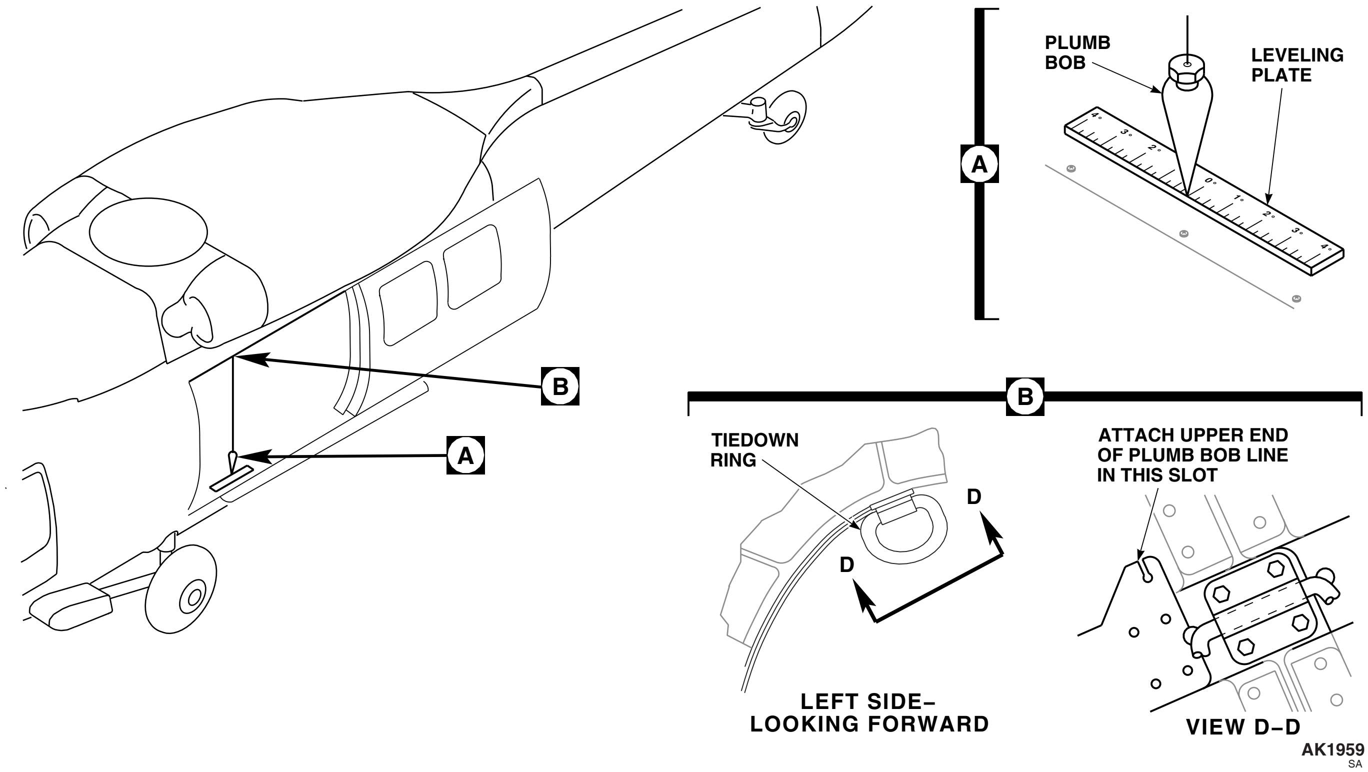

Figure 2. Level Helicopter.

**END OF WORK PACKAGE**

## AIRCRAFT GENERAL

## TIEDOWN AND MOOR HELICOPTER

**INITIAL SETUP:**

**Tools and Special Tools**

Adjuster Assembly, MB-1
Aircraft Mechanic's Toolkit, 5180-99-B01
Chain Assembly, FDC5723-M2
Flyaway Equipment Kit, (NON HIRSS), 70700-10000-011
Flyaway Equipment, (HIRSS), 70700-10000-014
Rope, MIL-R-30500

**Personnel Required**

Assistants - (3)
UH-60 Helicopter Repairer MOS 15T (2)

**References**

WP 1677 00
WP 1678 00

### TIEDOWN AND MOOR HELICOPTER

**CAUTION**

Structural damage can occur from high velocity surface winds. When possible, helicopter shall be evacuated to a safe weather area when tornado, hurricane, or winds above 75 knots are expected.

**NOTE**

- Mooring hardware is not flyaway equipment. Each mooring point in use will be equipped with mooring hardware.
- Floor panel installation is not required when tying down or mooring helicopter.

1. Park helicopter (WP 1678 00).
2. Fill fuel cells.
3. Secure chocks by nailing wood cleats from chock to chock on each side of each wheel. Use rope to secure chocks if wood cleats are not available, or when using ice grip chocks.

**CAUTION**

To prevent damage, it is recommended that blades be folded if wind speeds above 60 knots are expected. Tiedown of the main rotor blades should be done when actual or projected wind conditions are 45 to 60 knots.

4. Turn rotor head and position a blade over center of cockpit.

**CAUTION**

To avoid damaging blades, do not pull down end of blade more than 6 inches from its normal drooped position.

5. Install lock assembly, 70700-20369-041, into blade receiver on tip end of blade. Pull down on lock assembly lock release cable, insert lock assembly in blade receiver, and release lock release cable (Figure 1, Detail A).
6. Pull down on lock assembly to make sure it is locked into main rotor blade.

**TIEDOWN AND MOOR HELICOPTER** - Continued

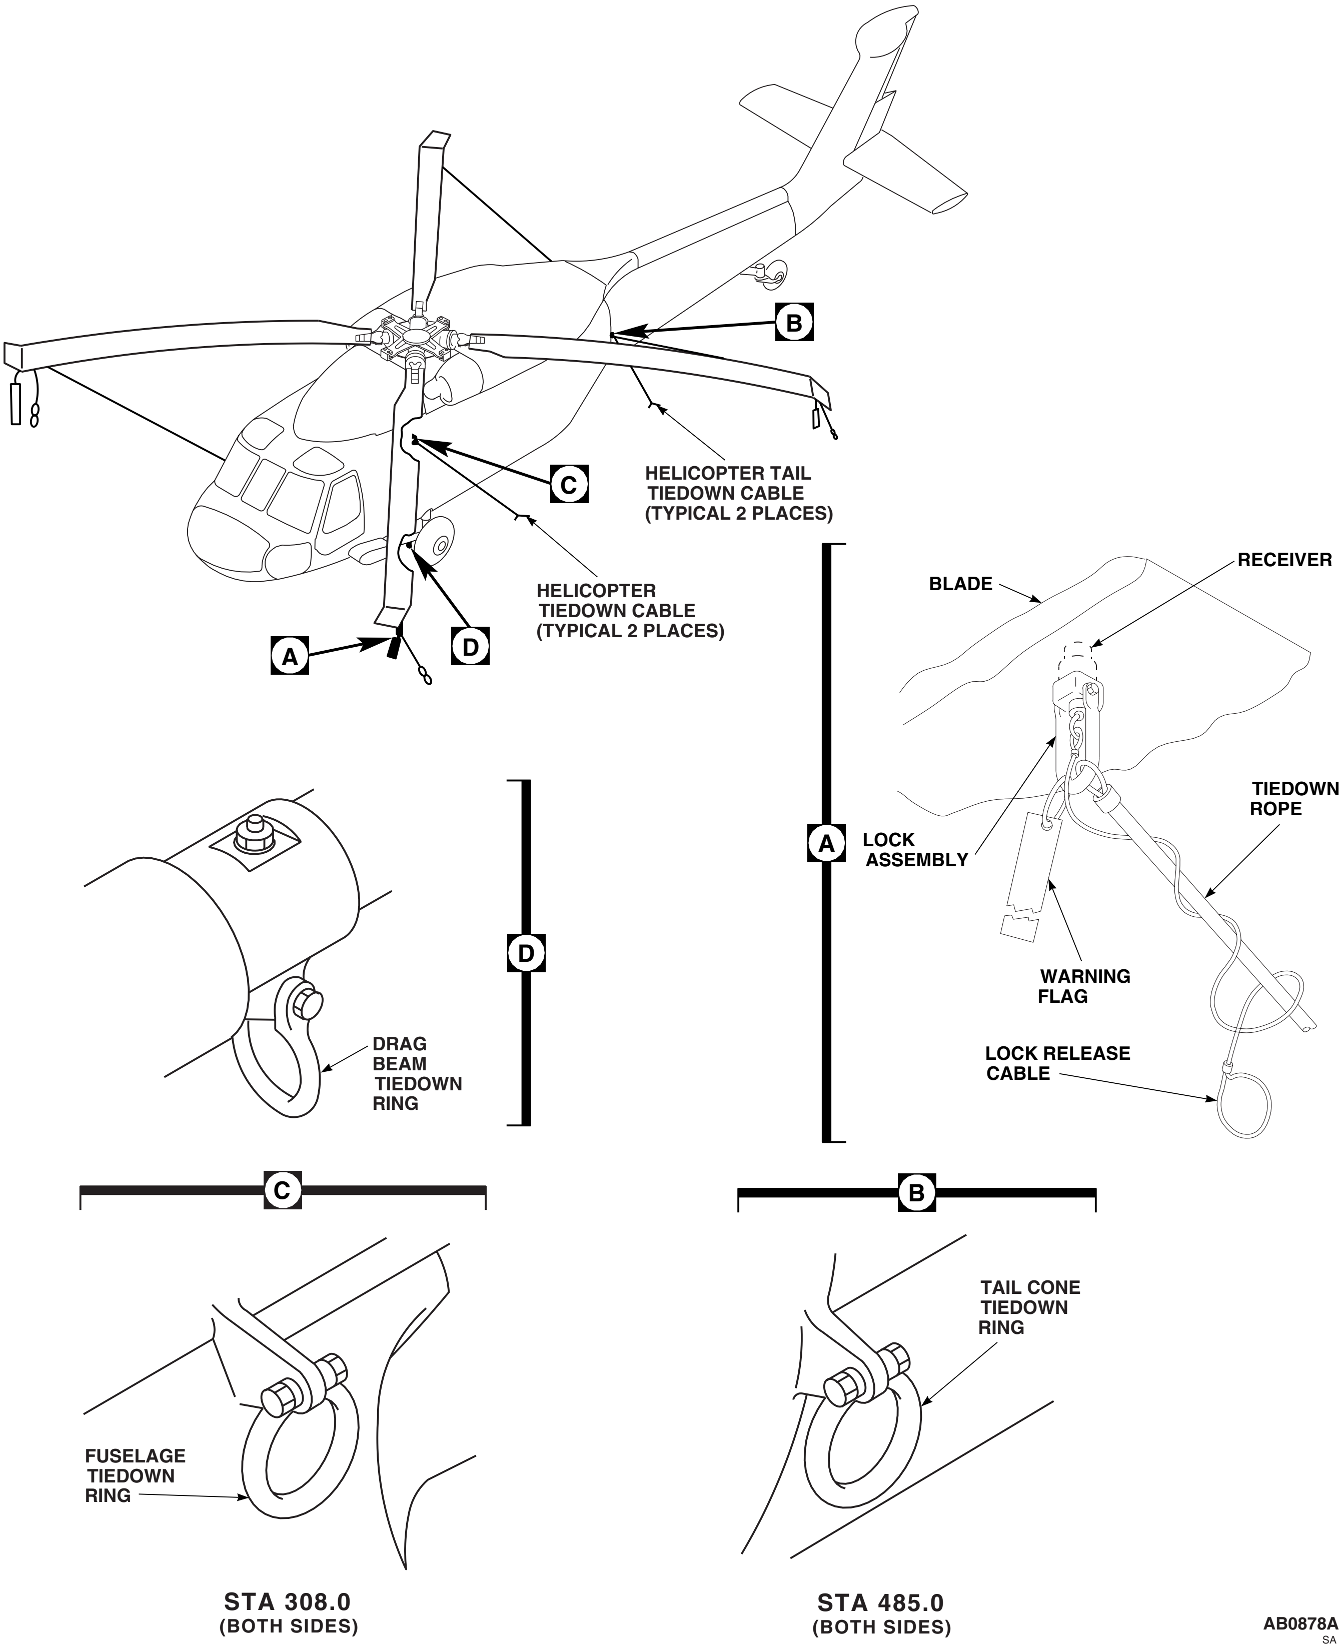

Figure 1. Tiedown Helicopter.

**TIEDOWN AND MOOR HELICOPTER** - Continued

## CAUTION

Damage to main rotor blade will occur if lock release cable is unsecure. Strong winds will cause lock release cable to strike blade. Make sure lock release blade is secure when tiedown ropes are attached to blade.

7. Secure lock release cable by wrapping it several times around tiedown rope, and pass end loop through last wrap (Figure 1, Detail A).
8. Turn rotor head, and install lock assemblies in other blades in same manner.
9. Position blades at an angle of about 45 degrees from centerline of helicopter, and engage gust lock.

## CAUTION

To prevent damaging blades, do not pull main rotor blade tips more than 6 inches below normal droop position when using tiedowns.

10. Fasten tiedown ropes from two rear blades to tail cone tiedown rings (Figure 1, Detail B).
11. Fasten tiedown ropes from two front blades to main landing gear drag beams tiedown rings (Figure 1, Detail D).
12. If helicopter is to be moored on paved surface, do this:
    a. Position helicopter on mooring pad with BL 0.0 directly above and parallel to centerline of mooring pad (2).
    b. Position upper main landing gear forward mooring rings an equal distance between two forward pairs of pad mooring points, 10 feet behind forward pair of mooring points.
    c. Connect hook-ends of chain assemblies to helicopter forward mooring rings.
    d. Connect chain assemblies to mooring pad tiedown points using adjuster assemblies.
    e. Adjust length of chains to take slack from chains.
    f. Repeat procedure for helicopter rear mounting points.
13. On unpaved surface fasten 1/2-inch aircraft cables or wire rope to tiedown rings, and extend outward to ground mooring points at 45 degree angles (2). Use 12,500 pound pull test chain or 1 1/2-inch manila rope if cable is not available. Provide enough slack in cable, chain, or rope between anchor and tiedown ring to prevent tightening due to moisture, distortion, or tire deflation on the opposite side. Use anti-slip knots in rope, such as the square or bowline.

## NOTE

When ground tiedown rings are not available, move helicopter to an area where anchor kits or deadman type anchors capable of sustaining a 12,500 pound per cable pull test may be used.

14. Install protective covers (WP 1677 00).

### INSTALL

1. Install covers, 70700-20460-041, over pitot tubes (Figure 1).
2. Install plugs, 70700-20507-042, in engine air inlets.
3. HIRSS Install HIRSS inlet plugs, 70700-20514-042 (Right hand) and 70700-20514-041 (Left hand), HIRSS exhaust plugs, 70700-20515-043 (Both sides), left hand HIRSS cover, 89SDSCC-D-0162-1, and right hand HIRSS cover, 89SDSCC-D-0162-2.
4. W/O HIRSS Insert engine exhaust plugs, 70700-20508-041, two places.
5. Install plug, 70700-20509-041, in APU exhaust duct.
6. Install cover, 70700-20511-041, over oil cooler, IR Jammer, and screens.

**NOTE**

Use extreme care while installing covers.

7. Install the following covers for storage, shipping, and adverse weather conditions.
   a. Locally-made covers, 1730BH025-1, over main rotor blades (Figure 187, WP 1805 00).
   b. Locally-made covers, 1730BH025-2, over tail rotor blades (Figure 188, WP 1805 00).
   c. Locally-made cover, 1730BH025-6, over mast (Figure 192, WP 1805 00).
   d. Locally-made cover, 1730BH025-3, over main rotor head (Figure 189, WP 1805 00).
   e. Locally-made cover, 1730BH025-4, over tail rotor gear box (Figure 190, WP 1805 00).

### REMOVE

1. Remove cover from oil cooler, IR Jammer if installed, and screens.
2. Remove plug from APU and engine exhaust ducts.
3. W/O HIRSS Remove plugs from engine exhaust ducts.

**REMOVE** - Continued

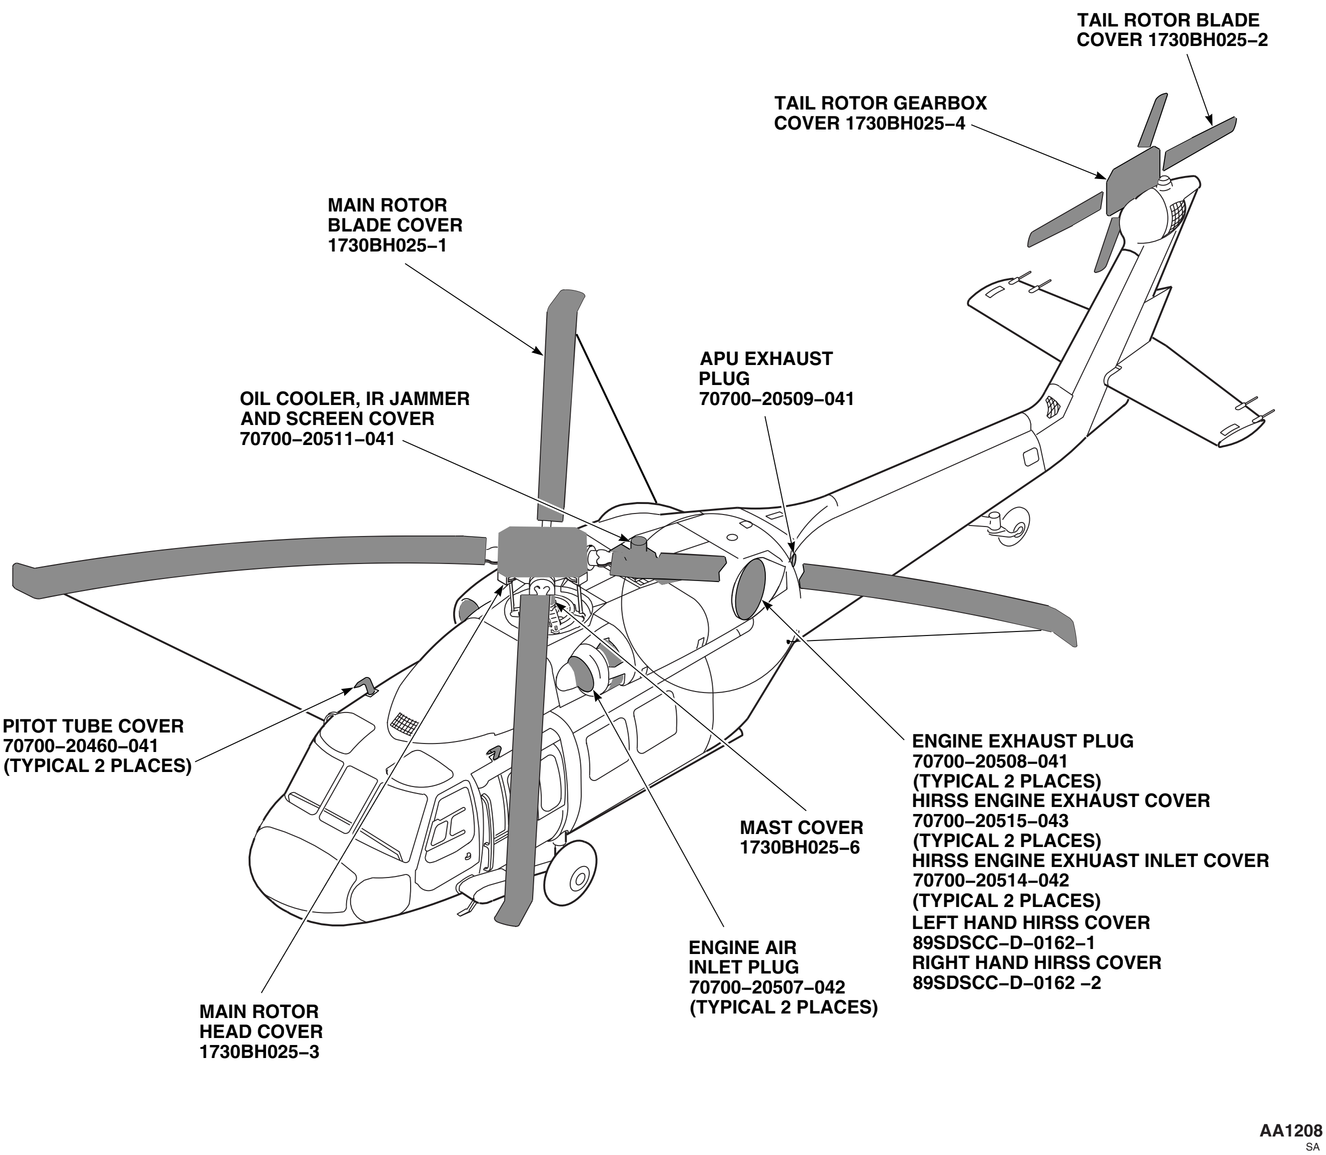

Figure 1. Protective Covers.

4. **HIRSS** Remove covers from left and right HIRSS, engine exhaust inlet, and engine exhaust plug. ■
5. Remove plug from engine air inlets.
6. Remove covers from pitot tubes.

## NOTE

Use extreme care while removing covers.

7. Remove the following covers if installed:
   a. Main rotor blade covers.
   b. Tail rotor blade covers.

**REMOVE** - Continued

c. Main rotor head cover.

d. Mast cover.

e. Tail rotor gear box cover.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## PARK HELICOPTER

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
Assistants - (3)
UH-60 Helicopter Repairer MOS 15T (2)

**References**
WP 1676 00
WP 1677 00

### GENERAL

1. Locate helicopter more than rotor blade distance from other helicopters or objects.
2. Park helicopter for ease of maintenance and servicing helicopter.

### SHORT-TERM PARKING

**NOTE**

- During short term parking, helicopter should be attended or monitored at all times.
- With winds 20 knots or more, helicopter shall face into wind.
- You may use battery power to position stabilator. If battery low light is on, battery power will be available only for APU starting, and external power should be used to operate stabilator.

1. Make sure stabilator is in neutral position, zero degrees .
2. Lock gust lock.
3. Center tail wheel and place tail wheel lockpin in ENGAGED position.
4. Depress toe brake pedals and pull up on parking brake handle to lock parking brakes. Chock main wheels.
5. Install protective covers (WP 1677 00).
6. Connect low-resistance ground wire to static ground wire on left main landing gear.

### LONG-TERM PARKING

**NOTE**

During long-term parking, the helicopter will not be attended or monitored.

1. Park helicopter same as short-term parking.

**LONG-TERM PARKING** - Continued

## NOTE

If 60 knot winds or more are expected, position main rotor head and fold main rotor blades.

2. Tiedown helicopter (WP 1676 00).

**END OF WORK PACKAGE**

## FOLD MAIN ROTOR BLADES

### NOTE

Main rotor blade holder (Figure 193, WP 1805 00) may be used in place of blade handling pole, 70700-20395-041.

1. On helicopters with blade deice system installed, disconnect electrical connectors, P841, P842, P843, and P844 from main rotor blades (WP 1220 00).

### WARNING

To prevent injury to personnel or damage to equipment, pitch control rods must be disconnected prior to starting blade fold procedures.

2. Disconnect pitch control rods from spindle horns (WP 0563 00).
3. Reinstall hardware in rod ends.

### CAUTION

To prevent damage to rod ends and/or main shaft extension, use suitable protection when securing rod ends.

4. Pad and secure rod ends to main shaft extension.

**FOLD MAIN ROTOR BLADES** - Continued

## WARNING

To prevent injury to personnel or damage to equipment, do not block swashplate during blade folding.

## CAUTION

To prevent damage to equipment, do not start engines or pressurize hydraulic systems while main rotor blades are folded.

## NOTE

If pylon is to be folded, fold main rotor blades first.

5. Attach retainer, 70700-20428-041, on left and right side at STA 585.0 (Figure 1, Sheet 1).
6. Attach retainer, 70700-20428-042, on left and right side at STA 624.0.
7. Turn main rotor head until yellow index marks on rotating and stationary swashplates line up.
8. **UH-60A 77-22714 - 78-22968** Without yellow index marks, do this:
   a. Line up red index marks.
   b. Mark rotating and stationary swashplate with grease pencil as shown in Figure 1, Sheet 1, Detail A).
   c. Line up grease pencil marks.
9. Turn main rotor head 360 degrees degrees as many times as required to have inboard tail rotor blade approximately horizontal so that it does not extend above top of tail rotor pylon. Engage gust lock.

## NOTE

Main rotor blades may be secured by two different kinds of pins, main rotor blade expandable pins, 70103-08107-102, and main rotor blade solid pins, 70103-08108-041. In the following procedures both types of pins are referred to as main rotor blade pins, except where noted.

10. Unlock all main rotor blade pins.
11. Fold red color-coded blade as follows:

**FOLD MAIN ROTOR BLADES** - Continued

## WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When folding any blade, watch for possible interference between main rotor blade pins of another blade and blade being folded.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during fold sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag main rotor blade gently to ease main rotor blade pin removal on installation and removal.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole from which they were removed. Note and record pin hole and blade location of all expandable pins removed.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

a. With aid of assistants, connect blade handling pole, 70700-20395-041, to blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.

b. Relieve load on main rotor blade pins on main rotor sleeve by lifting blade tip while pulling up on pin.

c. Remove leading edge pin from blade cuff and main rotor sleeve.

d. Using blade handling pole, walk blade forward over nose of helicopter.

e. Install blade fold bracket, 70700-20416-042, between blade cuff with pin, 70700-20394-045, and sleeve with main rotor blade pin.

f. Raise or lower the blade to line up pin holes. Alignment tool, 70700-20394-111, may be used to line up holes when installing pins.

g. Remove trailing edge pin, walk blade to rear of helicopter until fold bracket link, 70700-20415-042, can be installed between sleeve withmain rotor blade pin, and fold bracket with quick-release pin.

h. Continue walking blade to rear of helicopter until blade is above front retainer, 70700-20428-041.

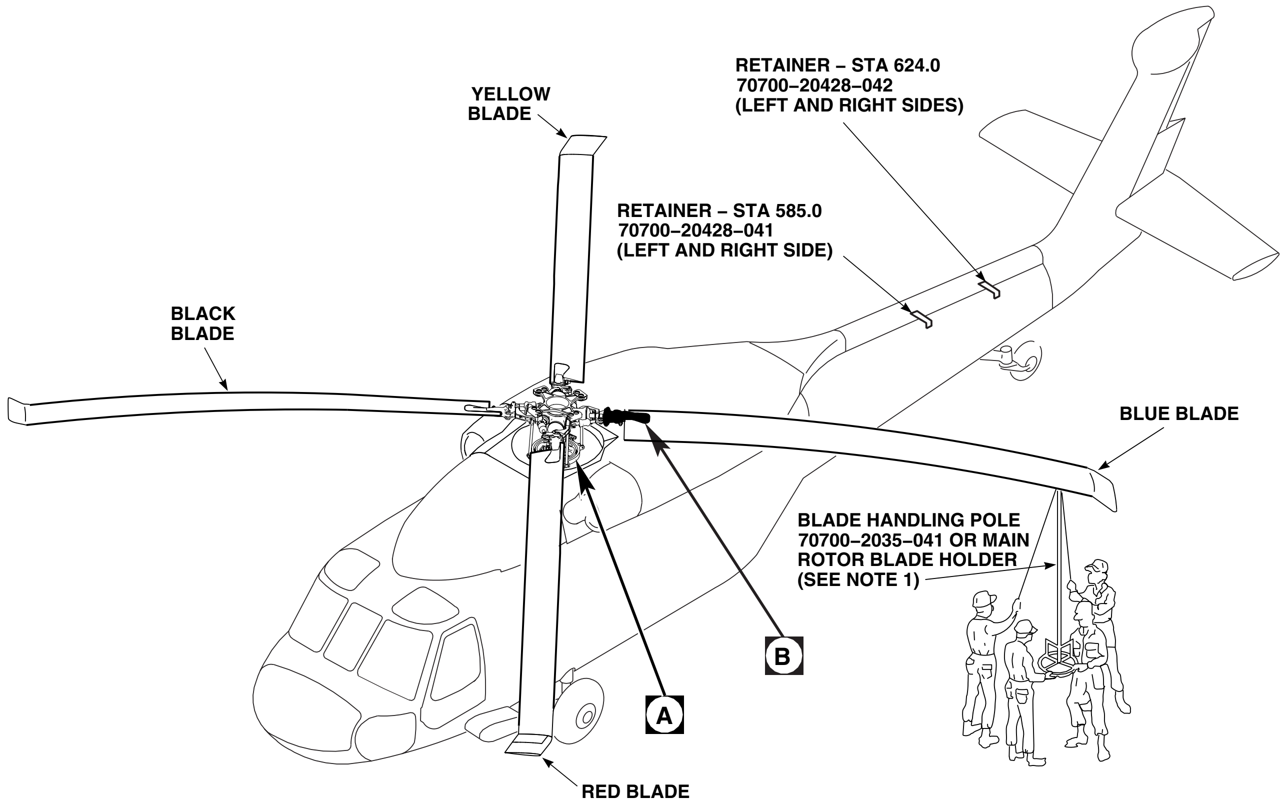
i. Using a maintenance platform, have an assistant manually hold blade at tip while blade handling pole or main rotor blade holder is removed. Immediately install support pole, 70700-20427-045, color-coded red, in blade lock receiver (Figure 1, Sheet 3).

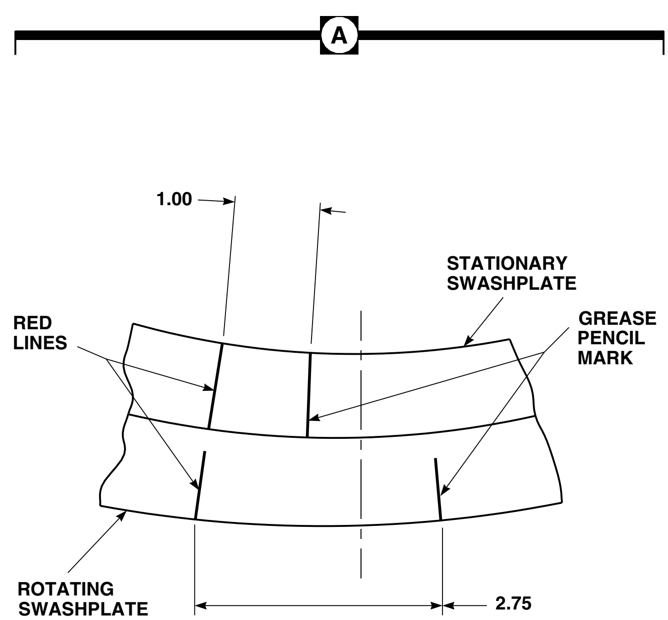
j. Put ball on lower end of support pole in socket of retainer, 70700-20428-041. Hold ball in socket by installing quick-release pin.

k. Attach fork on lower end of support pole to rod end on retainer, using quick-release pin.

12. Fold blue color-coded blade as follows:

**FOLD MAIN ROTOR BLADES** - Continued





NOTES

1. MEN POSITIONED UNDER BLUE BLADE FOR CLARITY ONLY.
2. USE TWO EXPANDABLE PINS ON ANY BLADE OR TWO SOLID PINS ON ANY BLADE AS LONG AS BOTH PINS ON ANY ONE BLADE ARE THE SAME. DO NOT INTERMIX EXPANDABLE AND SOLID MAIN ROTOR BLADE PINS ON ON THE SAME BLADE.

NOTE

ALL DIMENSIONS ARE IN INCHES UNLESS NOTED.

## WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When folding any blade, watch for possible interference between main rotor blade pins of another blade and blade being folded.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during fold sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag main rotor blade gently to ease main rotor blade pin removal on installation and removal.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole from which they were removed. Note and record pin hole and blade location of all expandable pins removed.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

a. With aid of assistants, connect blade handling pole, 70700-20395-041, to blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.

b. Relieve load on main rotor blade pins on main rotor sleeve by lifting blade tip while pulling up on pin.

c. Remove trailing edge pin from blade cuff and sleeve.

d. Using blade handling pole, walk blade back until it is above support fitting on tailcone.

e. Using a small workstand, have assistant manually hold blade while blade handling pole or main rotor blade holder is removed. Immediately install support pole, 70700-20427-043, color-coded blue, in blade lock receiver (Figure 1, Sheet 5).

## NOTE

Blade may be guided by assistant on workstand.

f. Put ball on lower end of support pole into socket of retainer, 70700-20428-042. Hold ball in socket by installing quick-release pin.

g. Attach fork on lower end of support pole to rod end of retainer, using quick-release pin.

h. Install padding between red and blue blade.

13. Fold black color-coded blade as follows:

**FOLD MAIN ROTOR BLADES** - Continued

## WARNING

## CSI

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When folding any blade, watch for possible interference between main rotor blade pins of another blade and blade being folded.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during fold sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag main rotor blade gently to ease main rotor blade pin removal on installation and removal.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole from which they were removed. Note and record pin hole and blade location of all expandable pins removed.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

a. Install blade handling pole, 70700-20395-041, in blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.

b. Lift blade to relieve load on main rotor blade pins. Remove trailing edge pin blade cuff and sleeve.

c. Walk blade forward over nose of helicopter and install blade fold bracket, 70700-20416-041, in blade cuff with pin, 70700-20394-045, and sleeve, using main rotor blade pin (Figure 1, Sheet 4).

d. Remove leading edge pin, walk blade to rear of helicopter until fold bracket link, 70700-20415-041, can be installed between sleeve with main rotor blade pin, and fold bracket, using quick-release pin. Continue walking blade to rear of helicopter.

e. Using a small workstand, have an assistant manually hold blade while blade handling pole or main rotor blade holder is removed. Immediately install blade support pole, 70700-20427-042, color-coded black, in blade lock receiver (Figure 1, Sheet 8).

f. Put ball on lower end of support pole in socket of retainer, 70700-20428-041. Hold ball in socket by installing quick-release pin.

g. Attach fork on lower end of support pole to rod end on retainer with quick-release pin.

14. Fold yellow color-coded blade as follows:

**FOLD MAIN ROTOR BLADES** - Continued

## WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When folding any blade, watch for possible interference between main rotor blade pins of another blade and blade being folded.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during fold sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag main rotor blade gently to ease main rotor blade pin removal on installation and removal.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole from which they were removed. Note and record pin hole and blade location of all expandable pins removed.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

a. Install blade handling pole, 70700-20395-041, in blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.

b. Lift blade to relieve load on main rotor blade pins in main rotor sleeve. Remove leading edge pin from blade cuff and sleeve.

c. Using blade handling pole, walk blade to rear of helicopter until blade is above rear retainer, 70700-20428-042, on tailcone.

d. Using a small workstand, have assistant manually hold blade tip while blade handling pole or main rotor blade holder is removed. Immediately install support pole, 70700-20427-044, color coded yellow, in blade lock receiver(Figure 1, Sheet 6).

e. Put ball on lower end of support pole in socket of retainer. Hold ball in socket by installing quick-release pin.

f. Attach fork on lower end of support pole to rod end on retainer with quick-release pin.

g. Install padding between blades.

## SPREAD MAIN ROTOR BLADES

### WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When spreading any blade, watch for possible interference between blade being spread and main rotor blade pins of other blades.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

### NOTE

- If any blade is dropped during spread sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag the main rotor blade gently to ease main rotor blade pin removal and installation.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole noted and recorded during fold procedure.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

1. Spread yellow color-coded blade as follows:
   a. Remove padding from between blades.
   b. Using a maintenance platform, have assistant manually hold blade.
   c. Remove quick-release pins from retainer, 70700-20428-042 (Figure 1, Sheet 6).
   d. Remove yellow color-coded support pole, 70700-20428-044, from blade and from retainer. Immediately install blade handling pole, 70700-20395-041, in blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.
   e. Using blade handling pole, walk blade forward until main rotor blade pin holes line up, and blade is in flight position.
   f. Inspect main rotor blade pins (WP 0542 00).

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- The outside surface of blade cuffs are critcal surfaces which must not be damaged during blade fold/spread procedure. Use extreme caution when folding/spreading main rotor blades.
- Do not intermix main rotor blade expandable pins with main rotor blade solid pins on same blade. Intermixing expandable and solid main rotor pins on the same blade may cause fatigue damage to spindle, cuff and blade attachment pins.
- Each blade must be secured by two of the same type of main rotor blade pin. (Example: Use two 70103–08107–102 main rotor blade expandable pins or two 70103–08108–041 main rotor blade solid pins on any one blade.)
- It is permissable to use main rotor expandable pins on any blade or main rotor blade solid pins on any blade as long as both pins on any onr blade are the same.

g. Insert main rotor blade pins through blade cuff lugs and main rotor spindle. Align pin handle with decal on cuff. Do not hit or force main rotor pins into position. Gently lead/lag blade to get proper alignment for main rotor blade pin to drop in.

h. If installing main rotor blade expandable pins, 70103-08107-102, perform a check of expandable pin tension (WP 0542 00).

i. Close and lock main rotor blade pin handles as follows:

(1) On helicopters with 70103-08107-102 main rotor blade expandable pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure spring handle of pin snaps over fully engages hex on locknut. Visually check for expansion of lockring on end of pin. Repeat for other main rotor blade expandable pin.

(2) On helicopters with 70103-08108-041 main rotor blade solid pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure hole in spring lever clip snaps over and fully engages pin end. Install cotter pin from side of pin closest to main rotor hub. Repeat for other main rotor blade solid pin (Figure 1, Sheet 2).

j. Remove blade handling pole or main rotor blade holder from blade.

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When spreading any blade, watch for possible interference between blade being spread and main rotor blade pins of other blades.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during spread sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag the main rotor blade gently to ease main rotor blade pin removal and installation.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole noted and recorded during fold procedure.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

2. Spread black color-coded blade as follows:
   a. Using a maintenance platform have assistant hold blade near blade tip (Figure 1, Sheet 9).
   b. Remove quick-release pins from retainer, 70700-20428-041, holding black color-coded support pole, 70700-20427-042, in place.
   c. Remove support pole from blade and from retainer. Immediately install blade handling pole, 70700-20395-041, in blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.
   d. Using blade handling pole, walk blade forward, remove fold bracket link, 70700-20415-041, from fold bracket, 70700-20416-041, and sleeve. Continue walking blade forward over nose of helicopter until leading edge of blade cuff can be secured to sleeve with a main rotor blade pin. If necessary, lift blade to install pin. Do not lock pin.
   e. Remove bracket from blade and sleeve, walk blade to rear of helicopter until trailing edge of blade cuff can be secured to sleeve with a main rotor blade pin. If necessary, lift blade to install pin.
   f. Inspect main rotor blade pins (WP 0542 00).

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- The outside surface of blade cuffs are critcal surfaces which must not be damaged during blade fold/spread procedure. Use extreme caution when folding/spreading main rotor blades.
- Do not intermix main rotor blade expandable pins with main rotor blade solid pins on same blade. Intermixing expandable and solid main rotor pins on the same blade may cause fatigue damage to spindle, cuff and blade attachment pins.
- Each blade must be secured by two of the same type of main rotor blade pin. (Example: Use two 70103–08107–102 main rotor blade expandable pins or two 70103–08108–041 main rotor blade solid pins on any one blade.)
- It is permissable to use main rotor expandable pins on any blade or main rotor blade solid pins on any blade as long as both pins on any onr blade are the same.

g. Insert main rotor blade pins through blade cuff lugs and main rotor spindle. Align pin handle with decal on cuff. Do not hit or force main rotor pins into position. Gently lead/lag blade to get proper alignment for main rotor blade pin to drop in.

h. If installing main rotor blade expandable pins, 70103-08107-102, perform a check of expandable pin tension (WP 0542 00).

i. Close and lock main rotor blade pin handles as follows:

(1) On helicopters with 70103-08107-102 main rotor blade expandable pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure spring handle of pin snaps over fully engages hex on locknut. Visually check for expansion of lockring on end of pin. Repeat for other main rotor blade expandable pin.

(2) On helicopters with 70103-08108-041 main rotor blade solid pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure hole in spring lever clip snaps over and fully engages pin end. Install cotter pin from side of pin closest to main rotor hub. Repeat for other main rotor blade solid pin (Figure 1, Sheet 2).

j. Remove blade handling pole or main rotor blade holder from blade.

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When spreading any blade, watch for possible interference between blade being spread and main rotor blade pins of other blades.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during spread sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag the main rotor blade gently to ease main rotor blade pin removal and installation.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole noted and recorded during fold procedure.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

3. Spread blue color-coded blade as follows:
   a. Remove padding from between blades.
   b. Using small workstand, have assistant hold blade near blade tip.
   c. Remove quick-release pins from retainer, 70700-20428-042, holding support pole, 70700-20427-043, color coded blue.
   d. Remove support pole from blade and from retainer. Immediately install blade handling pole, 70700-20395-041, in blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.
   e. Walk blade forward until leading edge of blade cuff can be secured to sleeve with main rotor blade pin. If necessary, lift blade to install pin.
   f. Inspect main rotor blade pins (WP 0542 00).

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- The outside surface of blade cuffs are critcal surfaces which must not be damaged during blade fold/spread procedure. Use extreme caution when folding/spreading main rotor blades.
- Do not intermix main rotor blade expandable pins with main rotor blade solid pins on same blade. Intermixing expandable and solid main rotor pins on the same blade may cause fatigue damage to spindle, cuff and blade attachment pins.
- Each blade must be secured by two of the same type of main rotor blade pin. (Example: Use two 70103–08107–102 main rotor blade expandable pins or two 70103–08108–041 main rotor blade solid pins on any one blade.)
- It is permissable to use main rotor expandable pins on any blade or main rotor blade solid pins on any blade as long as both pins on any onr blade are the same.

g. Insert main rotor blade pins through blade cuff lugs and main rotor spindle. Align pin handle with decal on cuff. Do not hit or force main rotor pins into position. Gently lead/lag blade to get proper alignment for main rotor blade pin to drop in.

h. If installing main rotor blade expandable pins, 70103-08107-102, perform a check of expandable pin tension (WP 0542 00).

i. Close and lock main rotor blade pin handles as follows:

(1) On helicopters with 70103-08107-102 main rotor blade expandable pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure spring handle of pin snaps over fully engages hex on locknut. Visually check for expansion of lockring on end of pin. Repeat for other main rotor blade expandable pin.

(2) On helicopters with 70103-08108-041 main rotor blade solid pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure hole in spring lever clip snaps over and fully engages pin end. Install cotter pin from side of pin closest to main rotor hub. Repeat for other main rotor blade solid pin (Figure 1, Sheet 2).

j. Remove blade handling pole or main rotor blade holder from blade.

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- Main rotor blade pins contain critical surfaces which must not be damaged during and after removal/installation of pin. Use extreme caution when removing/installing and provide protective covering for pins after removal, if not immediately installed in spindle.
- When spreading any blade, watch for possible interference between blade being spread and main rotor blade pins of other blades.
- To prevent damage to trim tab, do not support blade in trim tab area when using main rotor blade holder.

## NOTE

- If any blade is dropped during spread sequence, inspect main rotor blade (WP 0544 00) and elastomeric bearing (WP 0538 00).
- Lead and lag the main rotor blade gently to ease main rotor blade pin removal and installation.
- On helicopters with main rotor blade expandable pins, 70103-08107-102, make sure expandable pins are installed in the same hole noted and recorded during fold procedure.
- On helicopters with main rotor blade solid pins, 70103-08108-041, if pin cannot be removed by hand, use main rotor blade solid pin removal tool, 70700-25450-041, Figure 274, WP 1805 00, and procedures in WP 0576 00, to remove pin.

4. Spread red color-coded blade as follows:

   a. Using small workstand, have assistant manually hold blade near blade tip.

   b. Remove quick-release pins from retainer, 70700-20428-041, holding support pole, 70700-20427-041, color-coded red.

   c. Remove support pole from blade and retainer. Immediately install blade handling pole, 70700-20395-041, in blade lock receiver near end of blade. Make sure lock is fully engaged. If main rotor blade holder is used, slide over end of blade.

   d. Using blade handling pole, walk blade forward, remove fold bracket link, 70700-20415-042, from fold bracket, 70700-20416-042, and sleeve. Continue walking blade forward over nose of helicopter until leading edge of blade cuff can be secured to sleeve with a main rotor blade pin. If necessary, lift blade to install pin. Do not lock pin.

   e. Remove bracket from blade and sleeve, walk blade to rear of helicopter until trailing edge of blade cuff can be secured to sleeve with a main rotor blade pin. If necessary, lift blade to install pin.

   f. Inspect main rotor blade pins (WP 0542 00).

**SPREAD MAIN ROTOR BLADES** - Continued

## WARNING

- The outside surface of blade cuffs are critcal surfaces which must not be damaged during blade fold/spread procedure. Use extreme caution when folding/spreading main rotor blades.
- Do not intermix main rotor blade expandable pins with main rotor blade solid pins on same blade. Intermixing expandable and solid main rotor pins on the same blade may cause fatigue damage to spindle, cuff and blade attachment pins.
- Each blade must be secured by two of the same type of main rotor blade pin. (Example: Use two 70103–08107–102 main rotor blade expandable pins or two 70103–08108–041 main rotor blade solid pins on any one blade.)
- It is permissable to use main rotor expandable pins on any blade or main rotor blade solid pins on any blade as long as both pins on any onr blade are the same.

g. Insert main rotor blade pins through blade cuff lugs and main rotor spindle. Align pin handle with decal on cuff. Do not hit or force main rotor pins into position. Gently lead/lag blade to get proper alignment for main rotor blade pin to drop in.

h. If installing main rotor blade expandable pins, 70103-08107-102, perform a check of expandable pin tension (WP 0542 00).

i. Close and lock main rotor blade pin handles as follows:

(1) On helicopters with 70103-08107-102 main rotor blade expandable pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure spring handle of pin snaps over fully engages hex on locknut. Visually check for expansion of lockring on end of pin. Repeat for other main rotor blade expandable pin.

(2) On helicopters with 70103-08108-041 main rotor blade solid pins; insert pin fully through lugs on main rotor spindle and blade cuff. Close handle, making sure hole in spring lever clip snaps over and fully engages pin end. Install cotter pin from side of pin closest to main rotor hub (Figure 1, Sheet 2).

j. Remove blade handling pole or main rotor blade holder from blade.

5. Remove retainers, 70700-20428-041 and -042, from tailcone.
6. If deicing kit is installed, connect main rotor distributor electrical connectors, P841, P842, P843, and P844 to main rotor blades (WP 1220 00).
7. Install pitch control rod upper end on spindle horn (WP 0563 00).

**END OF WORK PACKAGE**

## UNIT LEVEL

## FOLD/SPREAD TAIL ROTOR BLADES

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Pylon Lock Strut, 70700-20385-041
Tail Rotor Blade Spacers, 70700-20453-041

**Material/Parts**
Strap, Tiedown, Electrical, Item 306, WP 1803 00

**Personnel Required**
Assistants - (3)
UH-60 Helicopter Repairer MOS 15T (2)

**References**
TM 1-1520-237-MTF
WP 0585 00
WP 1681 00
WP 1703 00
WP 1246 00
WP 1803 00

### FOLD TAIL ROTOR BLADES

**WARNING**

Injury to personnel and damage to equipment will result if tail rotor pylon is folded to 90 degrees incorrectly. If pylon is to be folded 90 degrees, refer to (WP 1681 00).

**NOTE**

Tail rotor blades should be folded with pylon spread using maintenance platform. If maintenance platform is not available, fold pylon 90 degrees and secure with pylon lock strut, 70700-20385-041. The pylon lock strut can then be used as a step for access to tail rotor blades.

1. If deicing kit is installed, disconnect tail rotor slipring electrical connectors from tail rotor blade electrical connectors (WP 1246 00).

**NOTE**

Do not change length of control rods.

2. Remove bolts, washers, and nuts from pitch control rods at pitch beam.
3. Remove pitch control rods and bonding jumpers from pitch beam (WP 0585 00). Reinstall bolts, washers, and nuts in rods for future use (Figure 1, Sheet 1).

**FOLD TAIL ROTOR BLADES** - Continued

## CAUTION

If color bands have worn off, use a grease pencil and put index marks on blades, retention plates, pitch control rods, and pitch beam before separating retention plates, to insure balance integrity during buildup.

## NOTE

Retention plates may contain hardware for balance purposes. Reinstall hardware in the same location from which they were removed.

4. Remove outboard retention plate bolts, washers, and nuts. Save hardware for use when spreading blades.
5. Slide outboard tail rotor blades towards pitch beam.
6. If deicing kit is installed, secure slipring rotor, spacers, and shims to inner retention plate with electrical tiedown straps, Item 306, WP 1803 00.
7. Turn outboard tail rotor blades clockwise on pitch control shaft until both blades (inboard and outboard) are parallel with each other (Figure 1, Sheet 2).
8. Put tail rotor blade spacer, 70700-20453-041, between blades near blades tips, and tie blades together.

## CAUTION

To prevent damage to rod ends and/or blades, use suitable protection when securing pitch control rods.

9. Pad and secure loose ends of pitch control rods to pitch beam or blades.

### SPREAD TAIL ROTOR BLADES

1. Free pitch control rod ends from pitch beam or blades.
2. Untie blades and remove tail rotor blade spacers.
3. Turn outboard tail rotor blade counterclockwise on pitch control shaft until blade is in normal flight position.

## CAUTION

Make sure color bands or index marks on blades, retention plates, pitch control rods, and pitch beam line up.

## NOTE

Retention plates may contain hardware for balance purposes. Reinstall hardware in the same location from which they were removed.

4. Slide outboard blade in toward inboard blade and line up boltholes of inboard and outboard retention plates. Outboard blade should line up with deep slot in outboard retention plate.
5. If deicing kit is installed, remove tiedown holding slipring rotor and hardware in place. Keep spacers and laminated shims next to their holes in retention plate.
6. Install retention plate halves using bolts, washers, and nuts (WP 0585 00).

## NOTE

Do not change lengths of control rods.

7. Install tail rotor pitch control rods in pitch beam (WP 0585 00).

**SPREAD TAIL ROTOR BLADES** - Continued

8. If deicing kit is installed:

   a. Inspect and treat electrical connectors (WP 1703 00).

   b. Connect tail rotor slipring electrical connector, P611, electrical connector, P612, electrical connector, P613, and electrical connector, P614, to tail rotor blade electrical connectors (WP 1246 00).

9. If deicing kit is installed, check for proper clearance between tail rotor slipring rotor and stator (WP 1246 00).

10. Tail rotor balance check due after blade fold.

11. Perform a limited maintenance test flight (TM 1-1520-237-MTF).

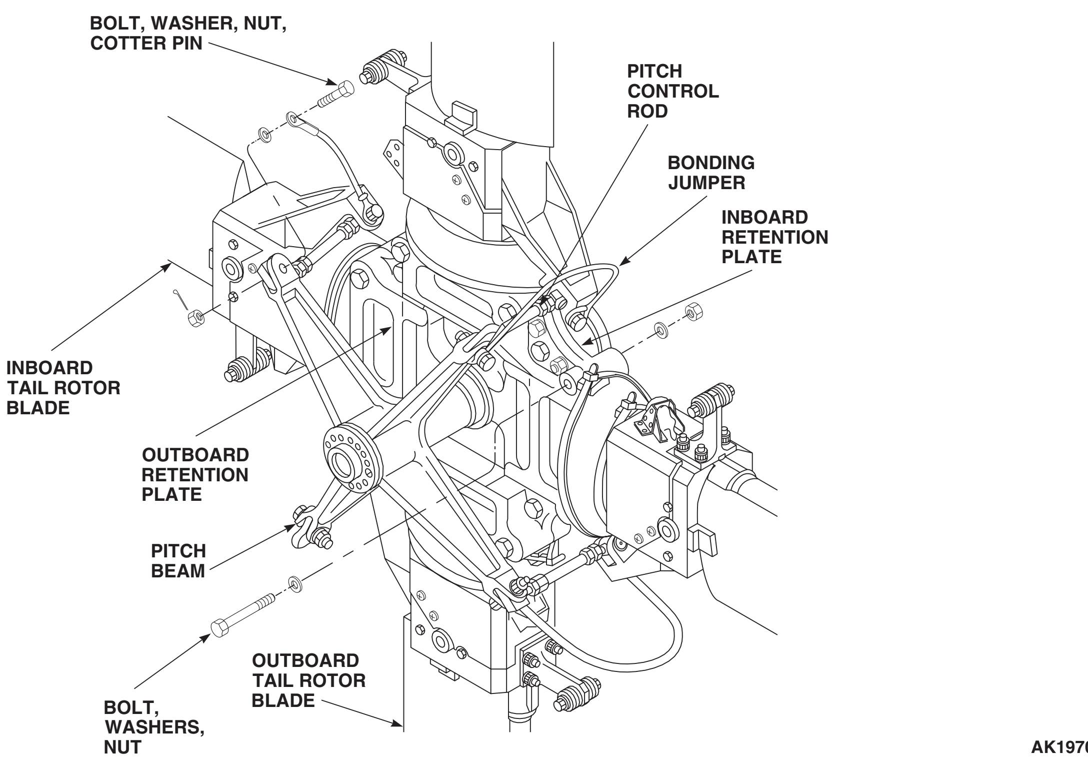

Figure 1. Fold/Spread Tail Rotor Blades. (Sheet 1 of 2)

WP 1805 00

## FOLD TAIL PYLON

### NOTE

- When folding tail pylon, tail rotor blades may or may not be folded.
- If main rotor blades are to be folded, fold pylon last.
- Stabilator does not have to be removed, if pylon is to be folded 90 degrees.

1. Remove stabilator (WP 0338 00).
2. Remove tail gear box cover and fairings (WP 0333 00).
3. Install lockout blocks and tie down straps on quadrant (Figure 1, Sheet 1, Detail A).

**FOLD TAIL PYLON** - Continued

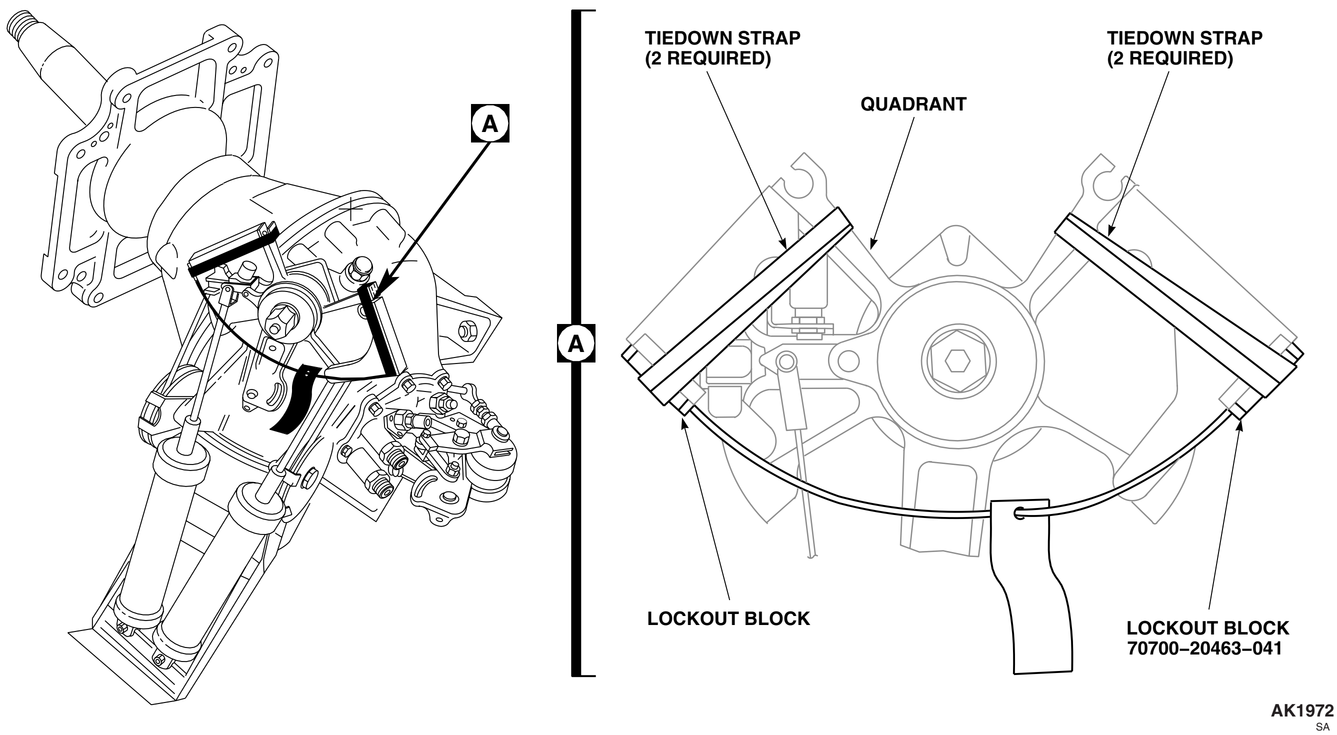

Figure 1. Fold/Unfold Tail Pylon. (Sheet 1 of 6)

## CAUTION

- To prevent injury to personnel, lockout blocks, 70700-20463-041, and electrical tiedown straps, Item 306, WP 1803 00, must be installed on quadrant before disconnecting tail rotor flight control cables.
- To prevent damage to equipment, do not start engines or pressurize hydraulic systems while main rotor blades are folded.

## NOTE

If lockout blocks are not available use this alternate method to release spring cylinder tension:

a. Connect external power or run APU. Turn on backup hydraulic system.

b. Place collective stick in about midposition.

c. For right spring cylinder, apply full left pedal to reduce spring tension. Remove cotter pin, nut, and washer. Pull down on cylinder while removing bolt. Unbolt spring cylinder from support.

d. Turn off all hydraulic and electrical power.

e. Tie cylinders to pylon with electrical tiedown straps, Item 306, WP 1803 00.

**FOLD TAIL PYLON** - Continued

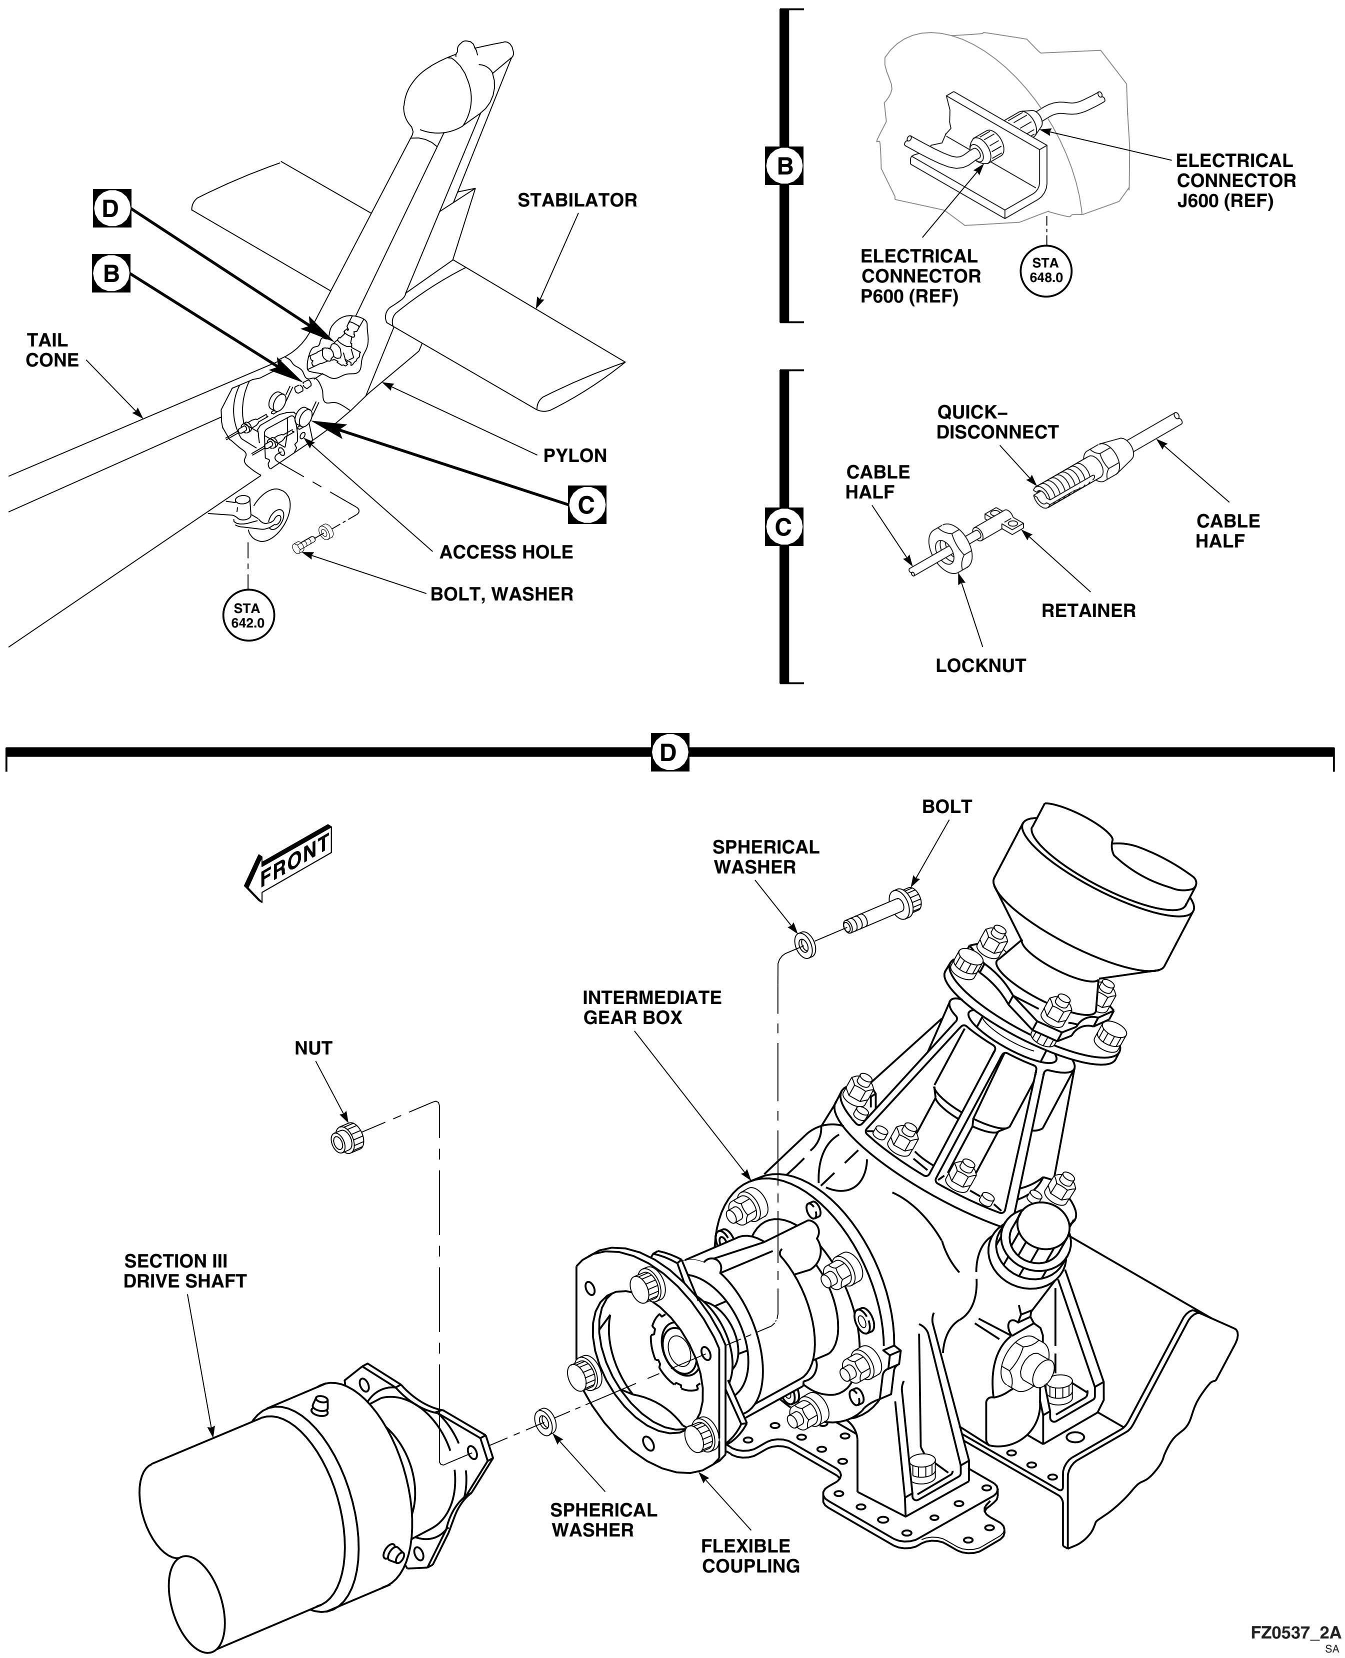

Figure 1. Fold/Unfold Tail Pylon. (Sheet 2 of 6)

**FOLD TAIL PYLON** - Continued

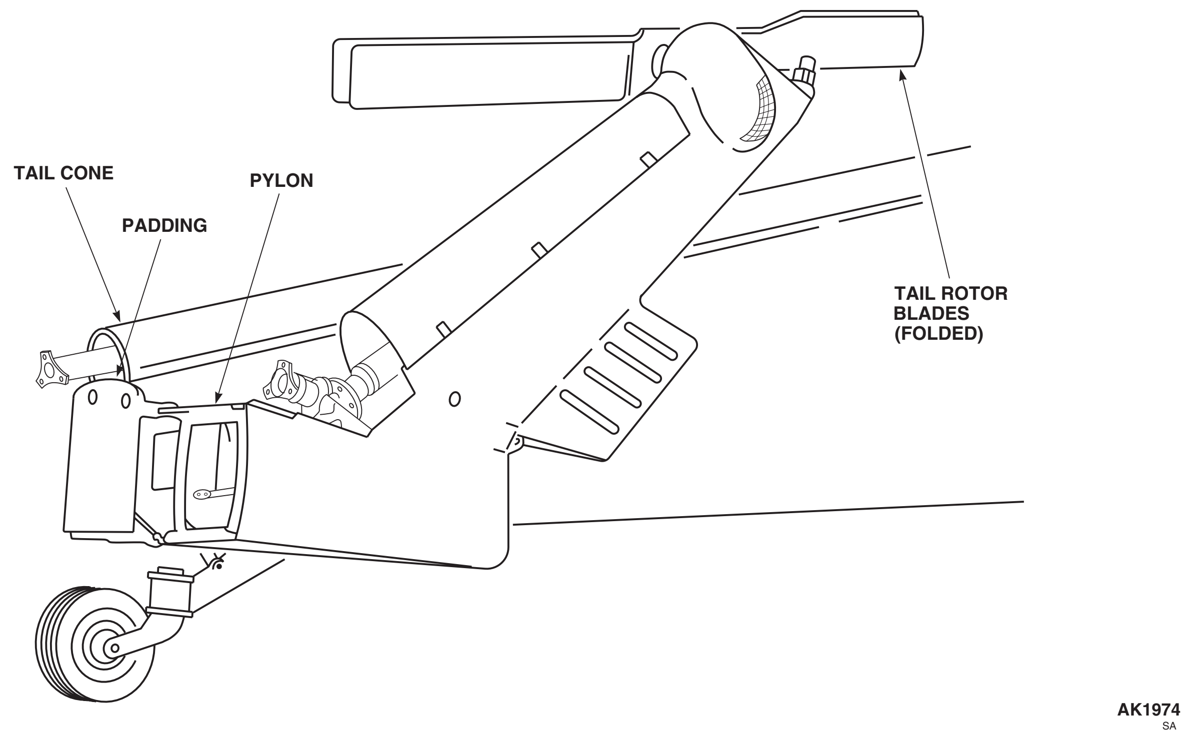

Figure 1. Fold/Unfold Tail Pylon. (Sheet 3 of 6)

## NOTE

Each cylinder is installed the same way.

4. Hinge open section of tail drive shaft fairing, just forward of intermediate gear box.
5. Remove intermediate gear box fairing (WP 0335 00).
6. Remove access fairings from left and right side of tail cone.

## NOTE

Either crowfoot adapter or locally-made flight control cable wrench, (Figure 48, WP 1805 00), may be used to disconnect cables.

7. Remove locknuts from control cable quick-disconnects, just forward of STA 642.0. Separate cable halves (Figure 1, Sheet 2, Detail C).
8. Disconnect electrical connectors near intermediate gearbox (Figure 1, Sheet 2, Detail B).
9. Remove bolts, washers, and nuts connecting tail drive shaft from flexible coupling (Figure 1, Sheet 2, Detail D). After removing each bolt, keep washers with that bolt. Put hardware in bag and tie to drive shaft.

**FOLD TAIL PYLON** - Continued

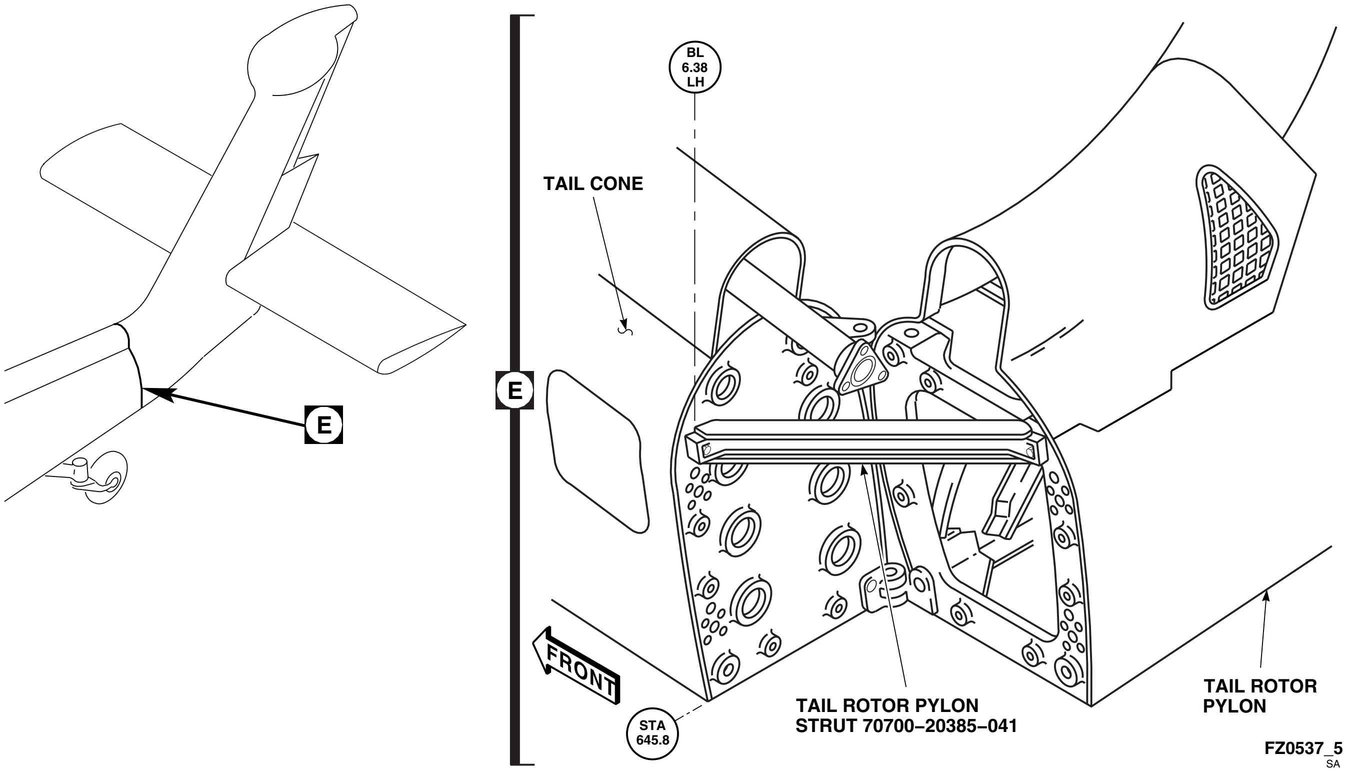

Figure 1. Fold/Unfold Tail Pylon. (Sheet 4 of 6)

## WARNING

Ensure personnel secure pylon to prevent inadvertent folding when bolts are removed.

## NOTE

To prevent excessive hydraulic fluid leaks from tail rotor quick-disconnects, be sure hydraulic system pressure is reduced to static.

10. Remove bolts and washers attaching pylon to tail cone bulkhead. Bolts are on upper and lower corners of tail cone bulkhead.
11. Put padding under tail drive shaft to support shaft.
12. Slowly fold pylon (Figure 1, Sheet 3).
13. Install pylon lock strut if pylon is to be folded 90 degrees (Figure 1, Sheet 4).
14. Watch that tail rotor blades clear main rotor blades. If tail blades need repositioning, turn at intermediate gear box input flange.
15. If pylon is to be folded 180 degrees, install pylon fold strut on pylon and tail cone (Figure 1, Sheet 5).
16. Put padding under tips of tail rotor blades, and tie tail rotor blades to main rotor blades or blade support poles, using fibrous cord, Item 95, WP 1803 00.

**FOLD TAIL PYLON** - Continued

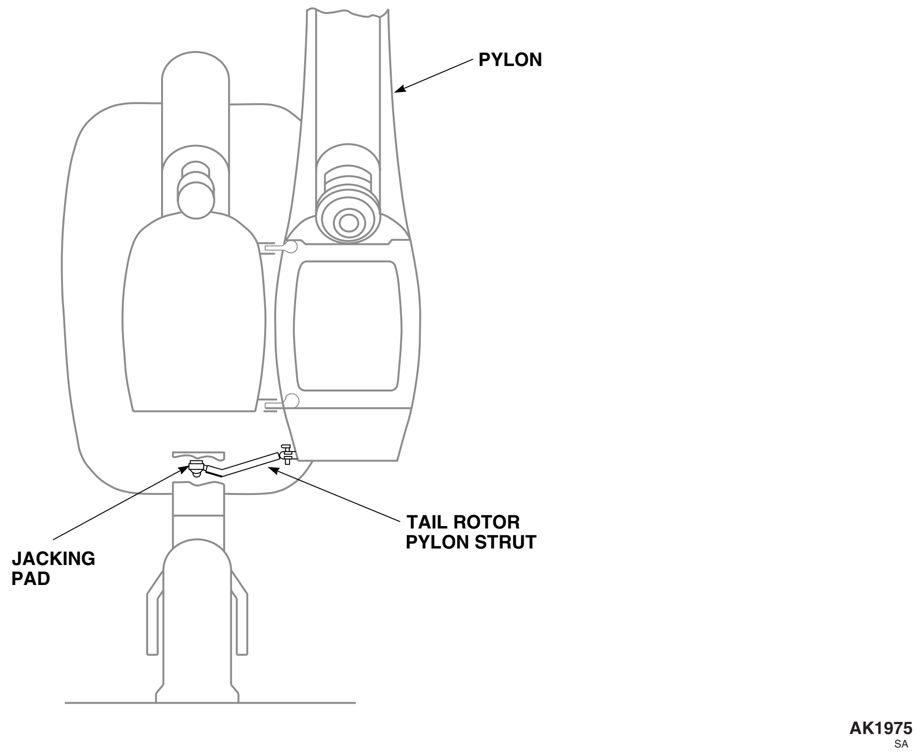

Figure 1. Fold/Unfold Tail Pylon. (Sheet 5 of 6)

## UNFOLD TAIL PYLON

### NOTE

When unfolding tail pylon, tail rotor blades may or may not be folded.

1. Remove padding and untie tail rotor blades.
2. Inspect pylon attachment bolts and washers using fluorescent penetrant inspection kit.

### WARNING

### CSI

- Verification of barrel-nut and retainer installation is a critical characteristic.
- Make sure fluorescent penetrant inspection of all attaching hardware has been done. If inspection facilities are not available, use all new hardware.

### NOTE

Make sure only square barrel nuts are used.

3. Check all four pylon to tail cone bolts and barrel-nuts for minimum breakaway torque as follows:
   a. Install bolt into barrel-nut until at least two threads protrude.

**UNFOLD TAIL PYLON** - Continued

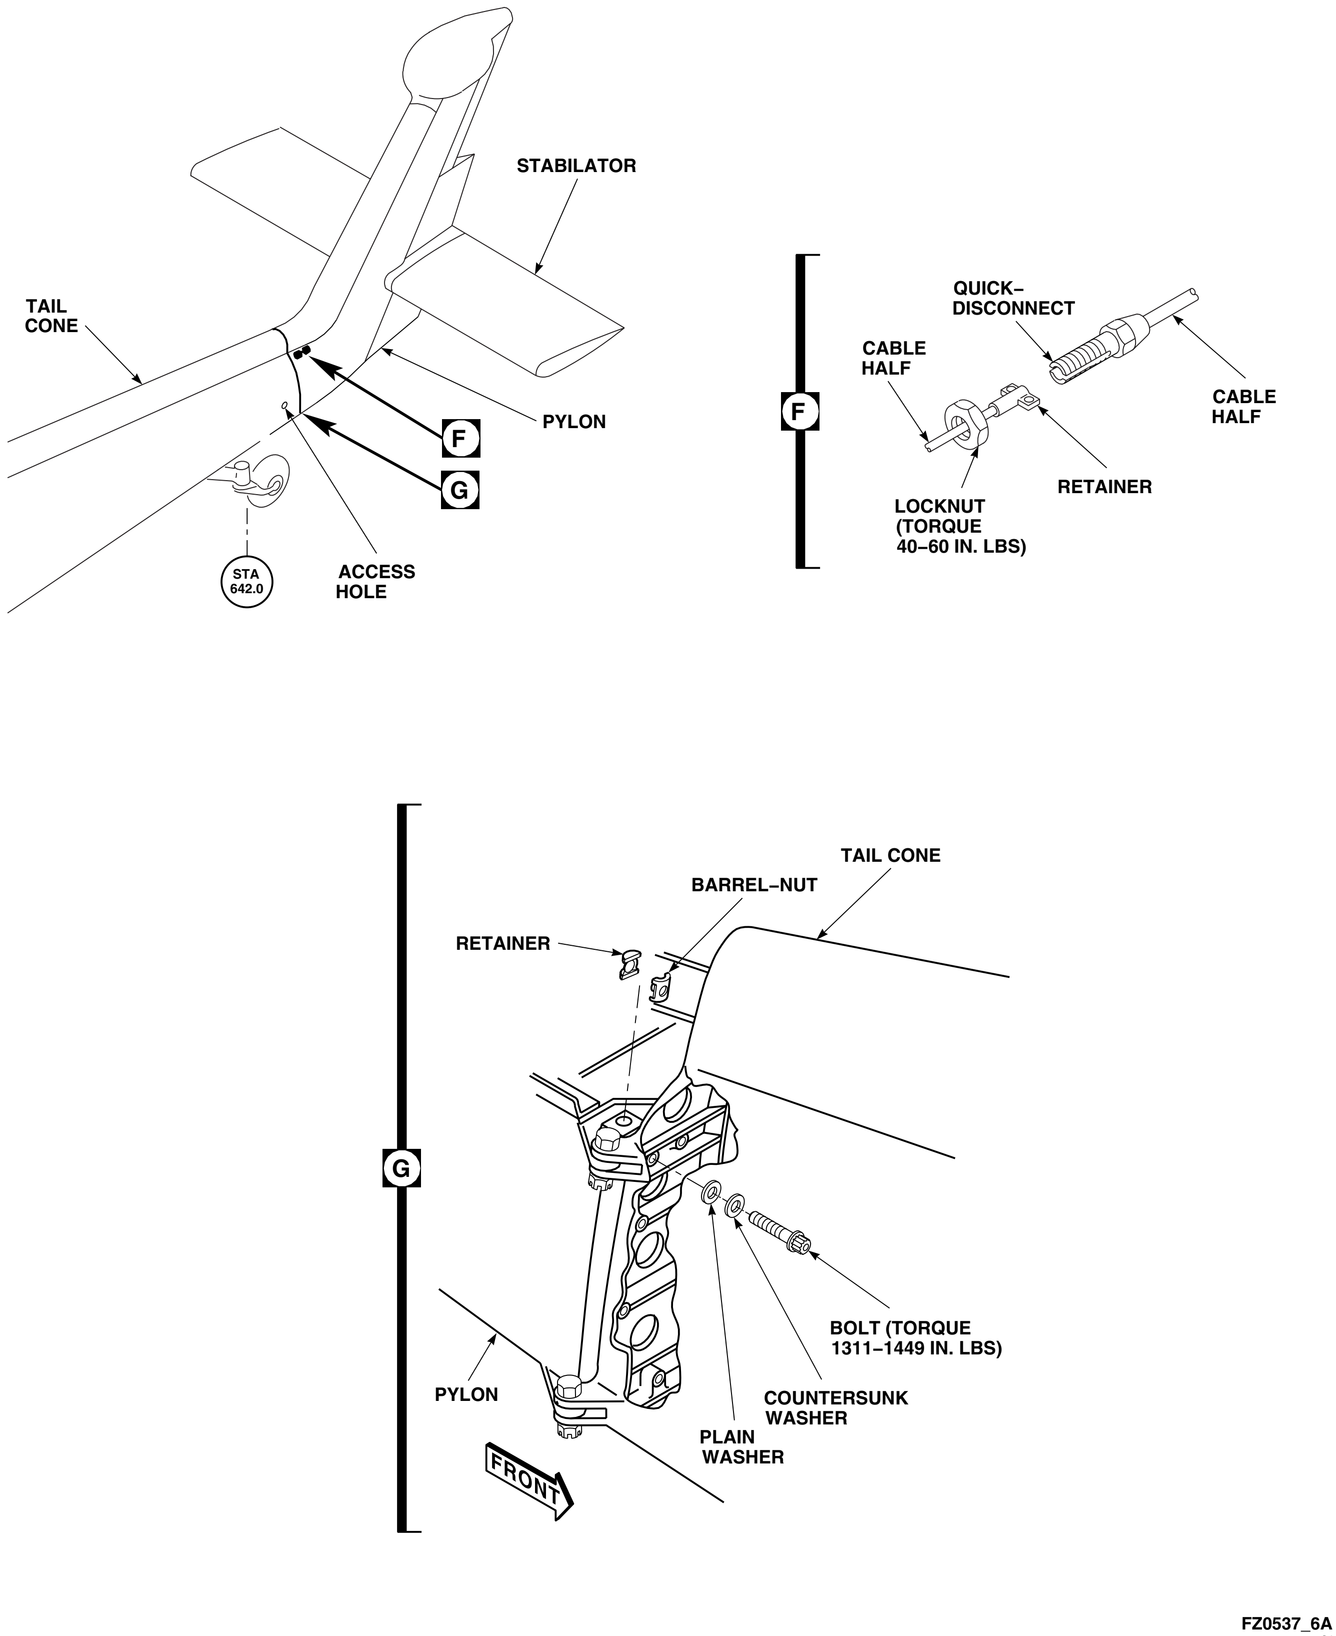

Figure 1. Fold/Unfold Tail Pylon. (Sheet 6 of 6)

**UNFOLD TAIL PYLON** - Continued

b. Back off bolt. **IF TORQUE NEEDED TO REMOVE BOLT IS LESS THAN 24 INCH-POUNDS, REPLACE BARREL-NUT AND RECHECK. IF TORQUE IS STILL LESS THAN 24 INCH-POUNDS, REPLACE BOLT AND BARREL-NUT.**

4. If pylon is folded 180 degrees, remove pylon fold strut from pylon and tail cone (Figure 1, Sheet 5).
5. If pylon is folded 90 degrees, remove pylon lock strut from pylon and tail cone (Figure 1, Sheet 4).
6. Slowly unfold pylon and watch that tail rotor blades clear main rotor blades. If blades need repositioning, turn at intermediate gear input flange.

## CAUTION

- To prevent crushing, make sure all electrical connectors and control cables are out of the way.
- To prevent excessive hydraulic fluid leaks from tail rotor quick-disconnects, be sure hydraulic system pressure is reduced to static.

7. Remove padding from under drive shaft.

## CAUTION

Be careful not to damage tail rotor servo lines when torquing pylon bolts.

8. Make sure there are radius blocks on front side of tail cone fitting boltholes.
9. Before closing pylon, make sure area is free of foreign objects.

## WARNING

## CSI

Verification of proper hardware installation and torque of bolts is a critical characteristic.

10. Install bolts, countersunk washers, and washers attaching pylon to tail cone bulkhead (Figure 1, Sheet 6). Bolt holes are on upper and lower corners of tail cone bulkhead. **TORQUE BOLTS TO 1311 - 1449 INCH-POUNDS.**
11. Inspect and treat electrical connectors (WP 1703 00).
12. Connect electrical connectors near intermediate gearbox (Figure 1, Sheet 2, Detail B).
13. Remove hardware from bag tied to drive shaft.
14. Reconnect drive shaft to flexible coupling (WP 0668 00).

**UNFOLD TAIL PYLON** - Continued

## WARNING

## CSI

Verification of proper cable routing between pulleys and retaining pins or guards is a critical characteristic.

## NOTE

- Either crowfoot adapter or locally made flight control cable wrench, Figure 48, WP 1805 00, may be used to connect cables.
- Quick-disconnects have two configurations.
- Extension half bottomed in slot half (2.44-inch slot).
- Ball end bottoms before extension half (2.63-inch slot).
- Both assemblies are acceptable when torqued to specifications.

15. Connect cable halves at quick-disconnects (two places) (Figure 1, Sheet 6). Bottom forward cable retainer locknut in aft cable slot. **TORQUE JAMNUT TO 40 - 60 INCH-POUNDS.**
16. Using nonelectrical wire, Item 357, WP 1803 00, lockwire locknut to retainer on quick-disconnect.

## CAUTION

Make sure cable halves are connected at quick-disconnects before removing lockout blocks from quadrant.

17. Remove lockout blocks from quadrant (Figure 1, Sheet 1, Detail A).
18. Connect spring cylinders (WP 1155 00).

## CAUTION

To prevent damage to equipment, do not start engines or pressurize hydraulic systems while blades are folded.

19. Close tail rotor drive shaft cover just forward of intermediate gear box.

## NOTE

Before installing fairings, make sure area is free of foreign objects.

20. Install intermediate gear box cover (WP 0335 00).
21. Install tail gear box cover (WP 0333 00).
22. Check DA Form 2408-13-1 to make sure that pylon to tail cone torque check is shown as due 40 hours after installation.

### KNEEL HELICOPTER

Kneel helicopter, using instructions given in TM 1-1520-237-S. Pay particular attention to clearance beneath helicopter under cargo hook, LF/ADF loop antenna, AN/ARQ-31 antenna, and lower anti-collision light, and drag beam wire strike cutters.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## CABIN TIEDOWN FITTINGS

**This WP supersedes WP 1683 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**

Aircraft Mechanic's Toolkit, 5180-99-B01
Depth Gage
Gloves
Goggles/Face Shield
Nonmetallic Scraper
Tiedown Fitting, 70700-20433-045
Torque Wrench, 0 - 300 ft lbs.
Torque Wrench, 150 - 1000 in. lbs.

**Material/Parts**

Acetone, Technical, Item 5, WP 1803 00
Bolt, 70700-20472-101,
Sealing Compound, Item 273, WP 1803 00
Towel, Machinery Wiping, Item 344, WP 1803 00
Wire, Nonelectrical, Item 355, WP 1803 00

**Personnel Required**

Assistants - (3)
UH-60 Helicopter Repairer MOS 15T (2)

**References**

WP 0233 00
WP 0258 00
WP 0259 00
WP 0260 00
WP 0261 00
WP 1703 00
WP 1803 00

### REMOVE

1. Remove tiedown fitting assembly from supports.
2. Reinstall tiedown covers in soundproofing in cabin ceiling.

### INSPECT

1. Visually inspect D-ring and bracket for deformation and cracking. **ANY VISUALLY DETECTABLE DAMAGE WILL REQUIRE REPLACEMENT OF THE D-RING, BRACKET AND ATTACHMENT FASTENERS. DO NOT REUSE ANY OF THE HARDWARE IF DAMAGE IS FOUND.**
2. Visually inspect D-ring, bracket and attachment hardware for corrosion. **PITS SHALL NOT EXCEED 0.015 - INCH DEPTH.** If corrosion is found and does not exceed limit, refer to (WP 1703 00).

### INSTALL

1. Remove tiedown cover plates in soundproofing in cabin ceiling (Figure 1).
2. Thread new bolt into barrel nut. **TORQUE MUST BE 32 - 300 INCH-POUNDS.** Replace barrel nut if run-on torque is not 32 - 300 inch-pounds.
3. If required, replace barrel nut as follows:
   a. **UH-60A UH-60L** Remove troop seats if installed (WP 0233 00).

**INSTALL** - Continued

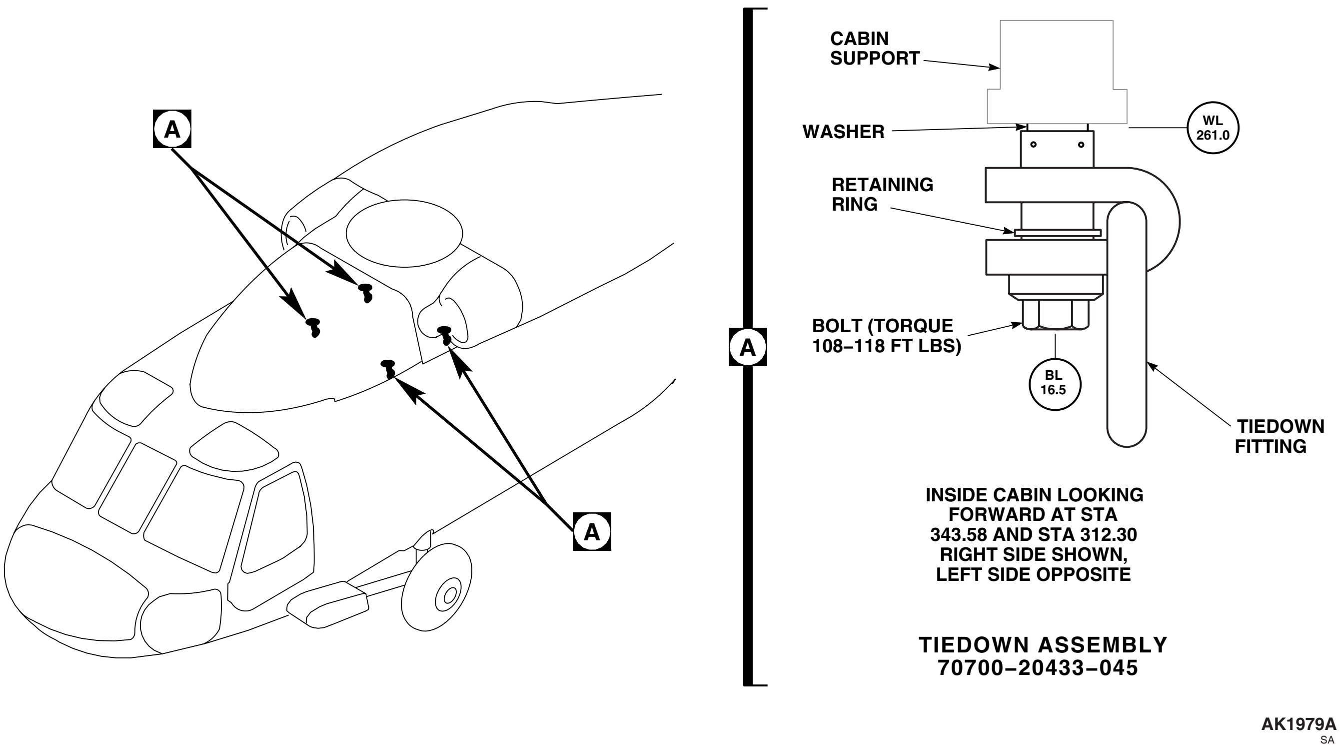

Figure 1. Cabin Tiedown Fittings.

## NOTE

Removal of main transmission drip pan is required only when replacing barrel nuts at STA 343.0.

b. Remove main transmission drip pan (WP 0259 00, WP 0260 00, or WP 0261 00).

c. Remove cabin ceiling panels as required (WP 0258 00).

d. At STA 312.0, remove barrel nut from transmission beam using pliers.

e. At STA 343.0, remove sealing compound using nonmetallic scraper.

f. Remove plastic plug in transmission beam.

g. Remove barrel nut from transmission beam.

## CAUTION

Damage to barrel nut recess will occur if barrel nut is improperly installed. Make sure barrel side of nut is toward bolthead.

h. Install retainer over barrel nut.

i. At STA 312.0, push barrel nut into transmission beam with barrel side toward bolthead.

**INSTALL** - Continued

## WARNING

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/faceshield. Avoid repeated or prolonged contact. Use only in well-ventilated areas (or use approved respirator as determined by local safety/ industrial hygiene personnel). Keep away from open flames, sparks, hot surfaces or other sources of ignition.

j. At STA 343.0, push barrel nut into transmission beam with barrel side toward bolthead. Instal plastic plug in transmission beam.

k. Clean surface of plastic plug and transmission beam area using machinery wiping towel, Item 344, WP 1803 00, wet with technical acetone, Item 5, WP 1803 00.

l. Apply an bead of sealing compound, Item 273, WP 1803 00, around plastic plug.

4. Install cabin ceiling panels as required (WP 0258 00).
5. Install main transmission drip pan if required (WP 0259 00, WP 0260 00, or WP 0261 00).
6. **UH-60A UH-60L** Install troop seats if required (WP 0233 00).

## WARNING

Injury to personnel and damage to equipment will result of improper tiedown fitting is installed. Tiedown fitting, 70700-20433-045, with an ″H″ etched in the head of bolt, 70700-20472-101, is the only approved fitting.

7. Install tiedown fitting assembly (Figure 1, Detail A) to cabin support. **TORQUE BOLTS TO 108 - 118 FOOT-POUNDS.**
8. Using nonelectrical wire, Item 355, WP 1803 00, lockwire bolt to drilled head bolt in troop seat support bar fitting.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## EXTERNAL HYDRAULIC POWER

**This WP supersedes WP 1684 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
Assistant - (1)
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 55-1730-229-12
WP 0296 00
WP 1603 00

## CAUTION

If external hydraulic power is connected to the No. 1 and/or No. 2 hydraulic pumps, pull out No. 1 PRI DC BACKUP PUMP PWR circuit breaker.

### CONNECT

1. Unlatch sliding cover.
2. With aid of assistant, slide cover open.
3. Connect pressure and return lines from hydraulic pumps and return port quick-disconnects on helicopter, as shown (Figure 1, Detail A).
4. Start hydraulic power source. If using a hydraulic power unit adjust flow rate and pressure to 6 gpm at 3000 psi. If using a AGPU adjust pressure to 3000 psi. Open servicing unit or test stands outlet and inlet valves (TM 55-1730-229-12).

### DISCONNECT

1. Close hydraulic power source outlet and inlet valves. Shut down servicing unit or test stands (TM 55-1730-229-12).
2. Disconnect hydraulic pressure source pressure and return lines from hydraulic pumps, and from return ports (Figure 1, Detail A).
3. Install caps on hydraulic pump pressure ports, and on return ports.
4. Service hydraulic pump modules (WP 1603 00).
5. Check area for cleanness and foreign material.
6. With aid of assistant, close and latch sliding cover (WP 0296 00).

**DISCONNECT** - Continued

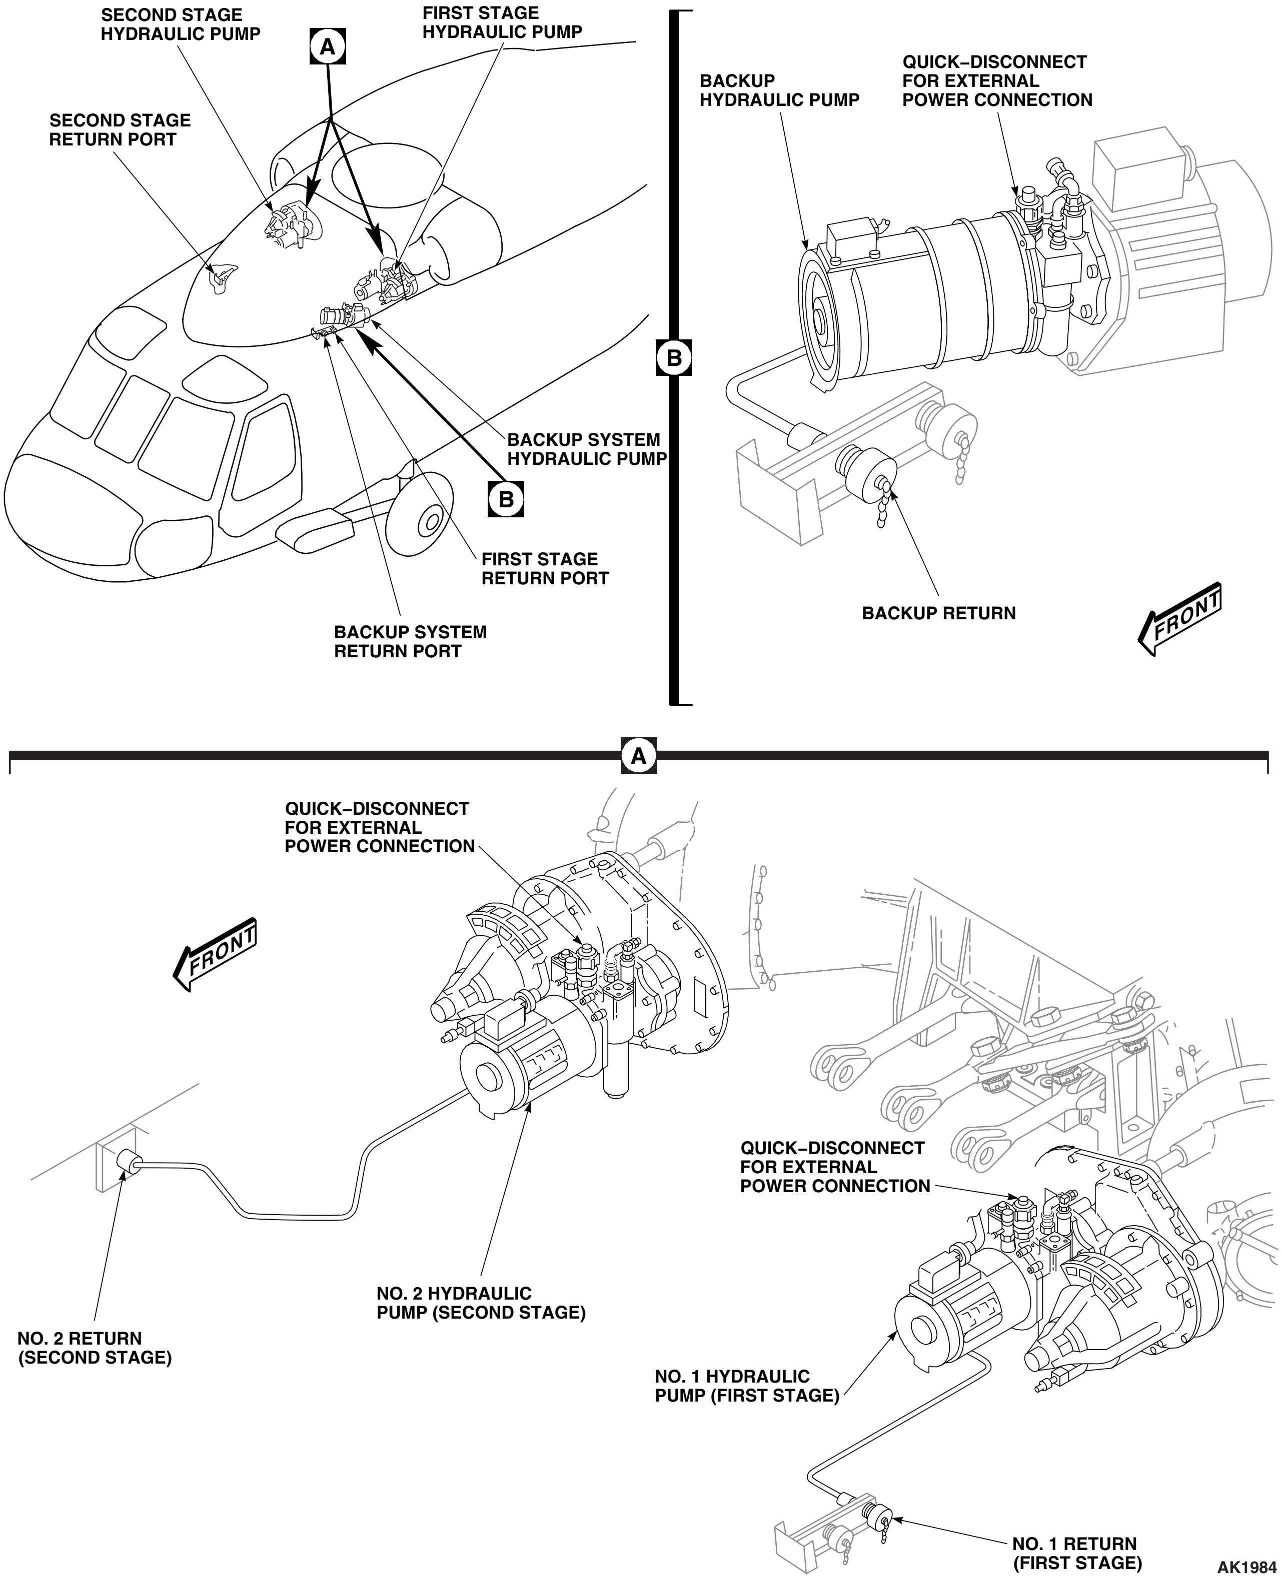

Figure 1. External Hydraulic Power.

**END OF WORK PACKAGE**

TM 1-1520-237-10

### CONNECT

1. Make sure all switchs and circuit breakers are in the appropriate position (TM 1-1520-237-10).

## CAUTION

- **HH-60A HH-60L** To prevent damage to Multifunction Display (MFD), make sure MFD ON/OFF switch is set to OFF.
- To prevent damage to the stabilator make sure that the stabliator is clear prior to applying power.

2. Open access cover (4B-26). Connect external power source, to EXT POWER RECEPTACLE, using equipment operation instructions (Figure 1).
3. Place EXT PWR switch, on upper console in cockpit, to RESET, then ON (Figure 1).

### DISCONNECT

1. Place EXT PWR switch, on upper console, OFF (Figure 1, Detail A).
2. Shut down and disconnect generator set from EXT POWER RECEPTACLE (Figure 1).
3. Close access cover (4B-26).

**DISCONNECT** - Continued

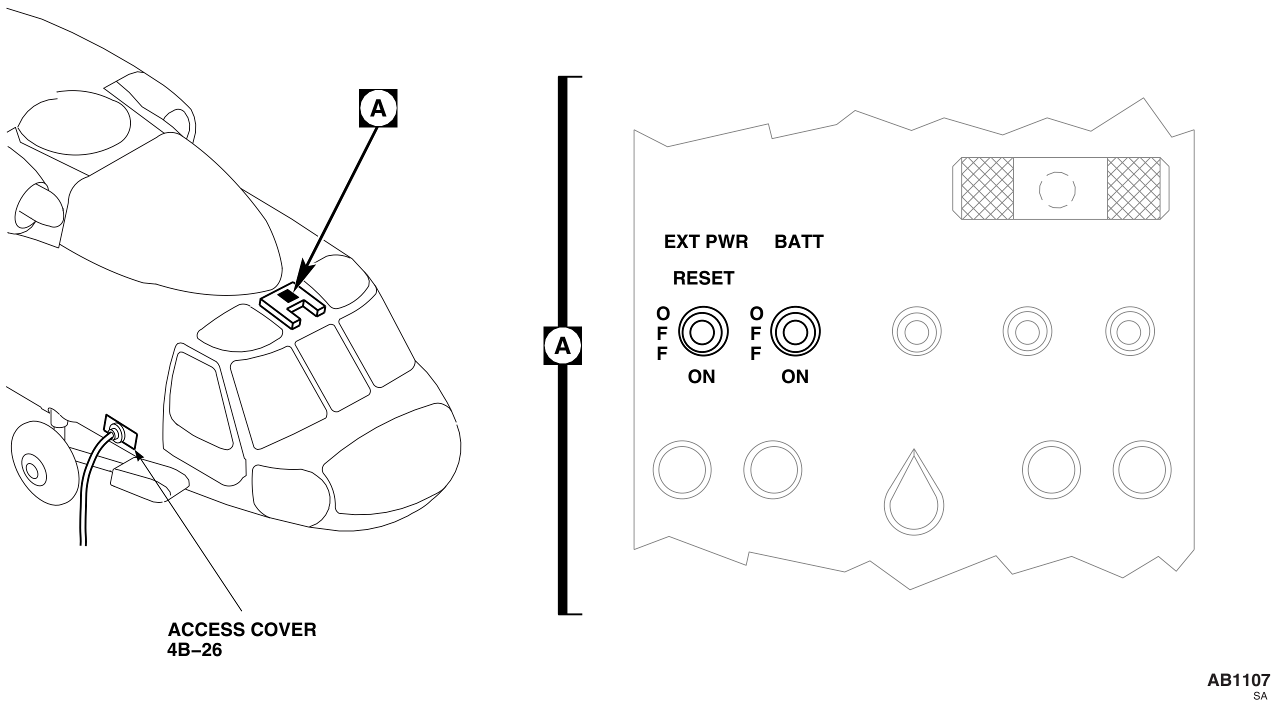

Figure 1. External Electrical Power.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## PLATFORM SCALE WEIGHING

### INITIAL SETUP:

**Tools and Special Tools**

Aircraft Mechanic's Toolkit, 5180-99-B01
Digital Aircraft Weighing System (DAWS), AC1-25LP-410
Plumb Bob Alignment Tool, Locally Made, Figure 270, WP 1805 00
Tow Bar, AA1730-1251

**Material/Parts**

Nitrogen, Item 199, WP 1803 00
Tape, Pressure Sensitive, Adhesive, Item 312, WP 1803 00
Thread, Item 341, WP 1803 00

**Personnel Required**

Assistant - (4)
UH-60 Helicopter Repairer MOS 15T (1)

**References**

TM 55-1500-342-23
WP 1598 00
WP 1599 00
WP 1803 00
WP 1805 00

### PREPARATION FOR WEIGHING

#### NOTE

To assist in standardizing DD Form 365-1, Chart A, Master Chart A's are available at the Aeromechanics' website (www.aeromech.redstone.army.mil).

1. Prepare helicopter for weighing in accordance with TM 55-1500-342-23. Make sure all tires and struts are properly serviced.
2. Helicopter should be defueled for weighing.
   a. If not possible, fuel helicopter to a full condition using gravity refuel method.
   b. Take a sample from bottom of tank and measure and record fuel density.
3. Verify scales are within acceptable range of calibration dates.

### SCALE SET-UP

#### NOTE

- To prevent damage to weighing equipment and to make sure accurate results, each scale must be in full contact with floor. Avoid placing scales on or near drainage holes, cracks or uneven floor areas.
- Scales must be set up in accordance with scale manufacturers technical manual. Make sure all latitude and altitude adjustments are made prior to use.

Select appropriate location for weighing where floor slope does not exceed 1/4 - inch per foot (1.2 degrees).

### POSITION SCALES

1. Install ramps and extender plates on each scale and position behind main landing gears (Figure 1), with ramp in contact with tire. Position behind tail landing gear tire (Figure 2), approximately 28.5 - inches from axle center to center of scale. To prevent slippage, place thin hard rubber mat under each approach ramp.

**POSITION SCALES** - Continued

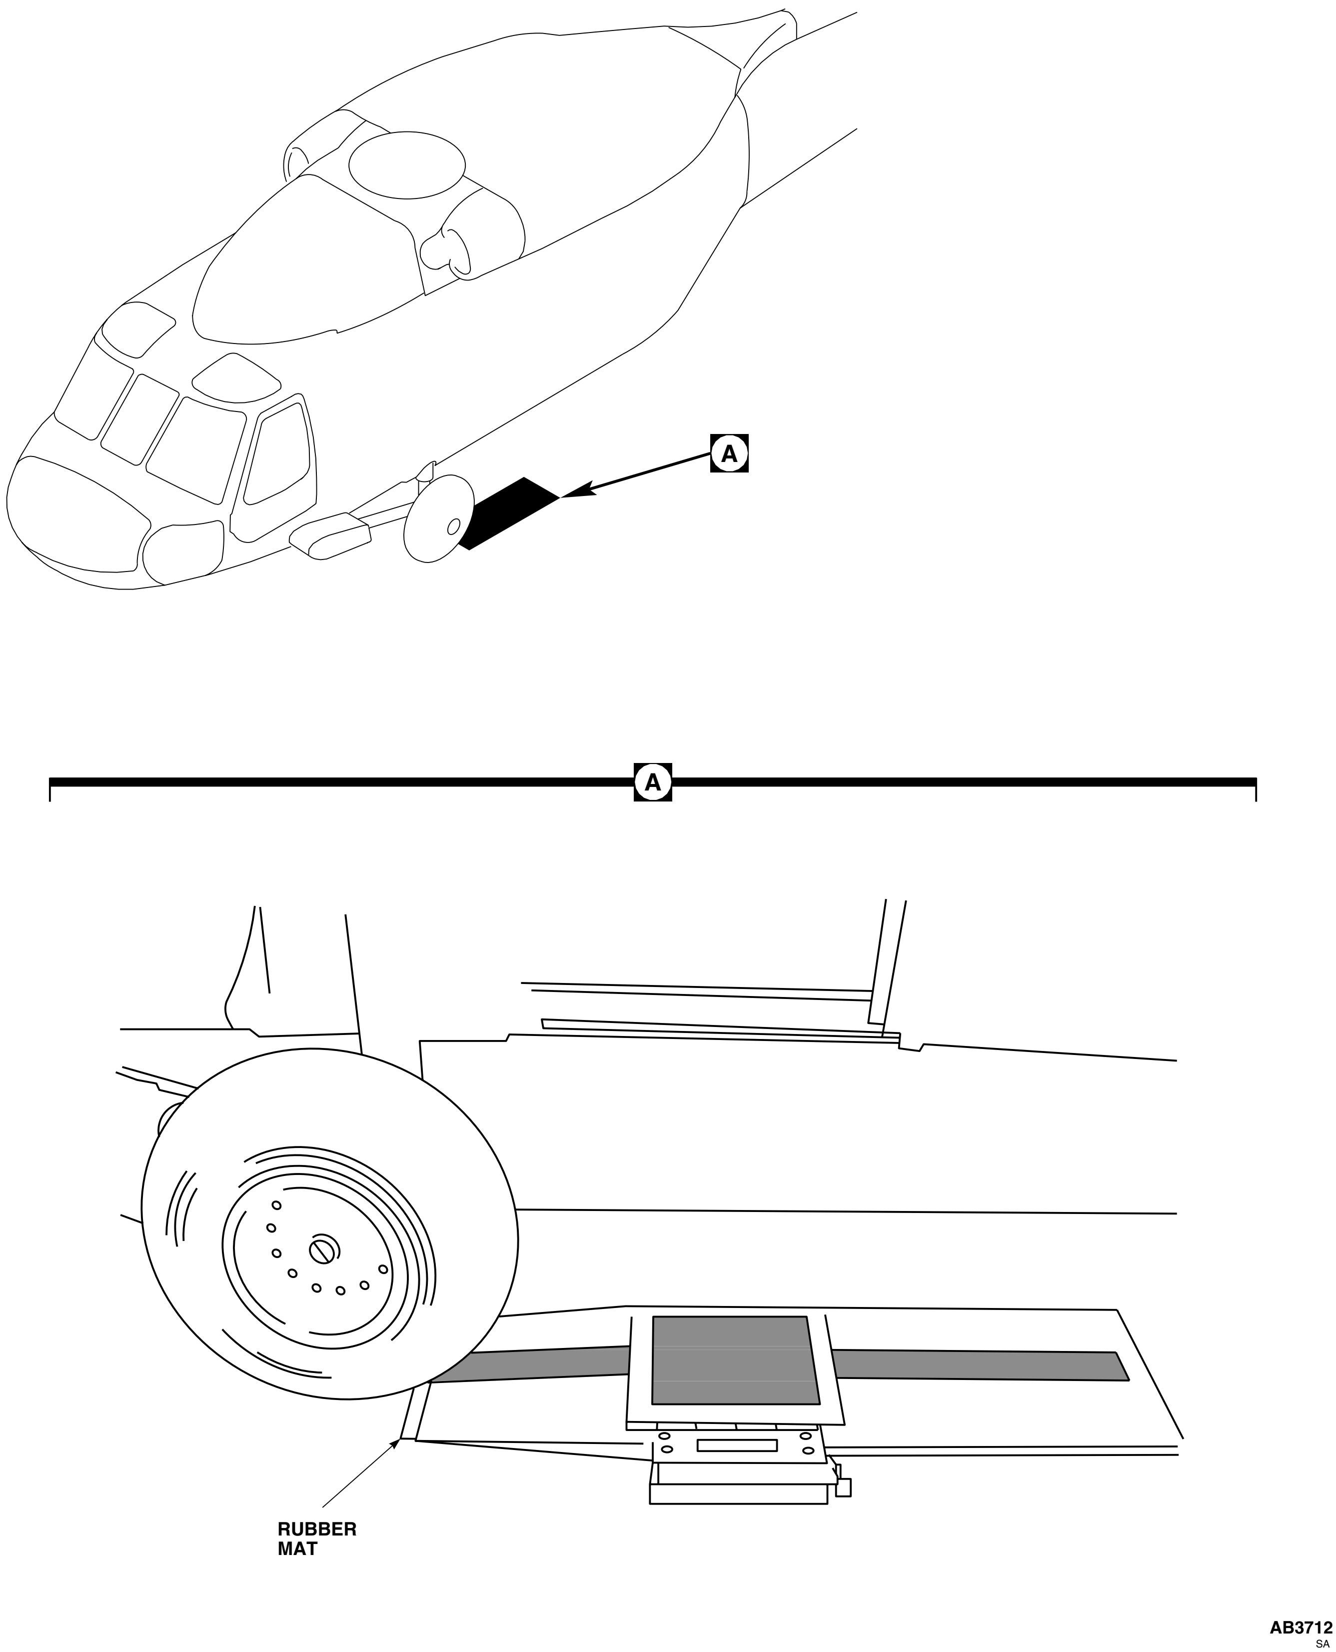

Figure 1. Main Gear Scale Position.

**POSITION SCALES** - Continued

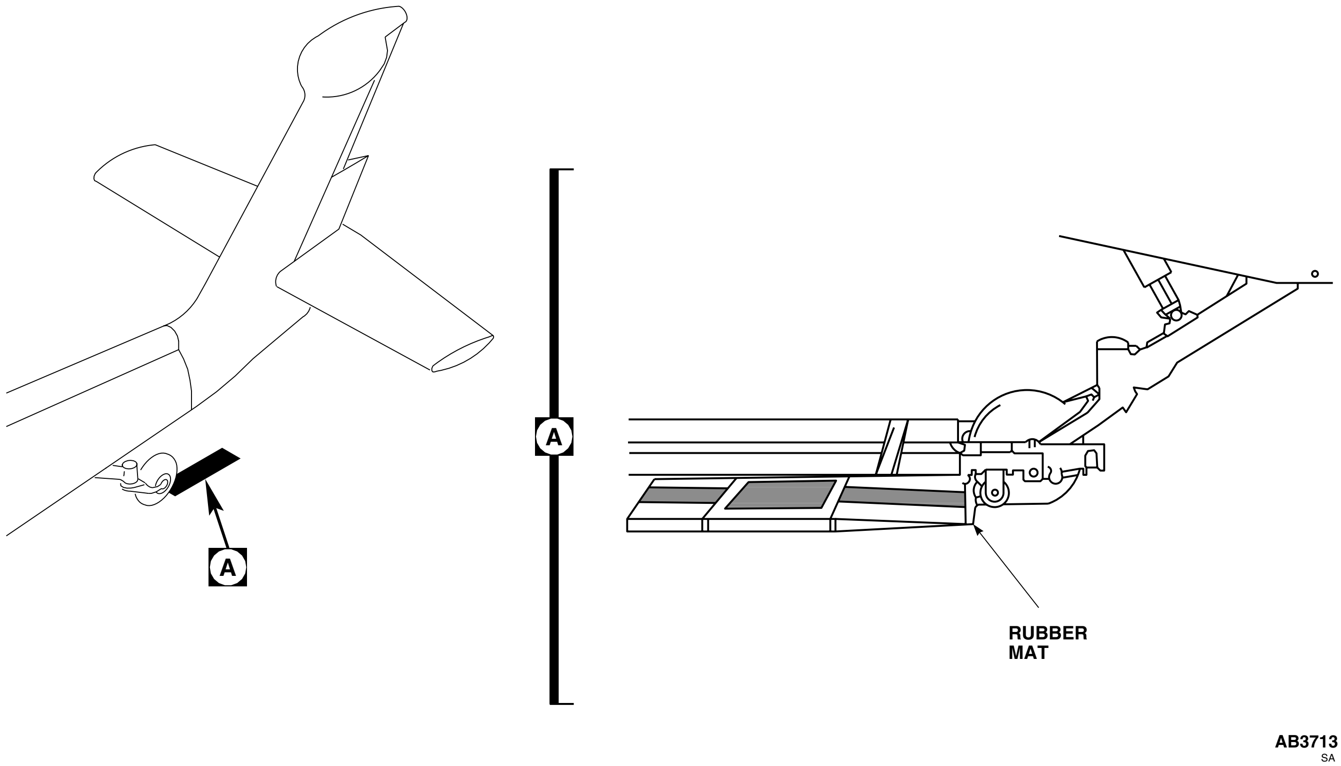

Figure 2. Tail Gear Scale Position.

2. Turn each scale on for 3 minutes, press ″ZERO″, and make sure each scale indicates ″0″.
3. Apply a slight load to each scale by gently stepping on it. Observe load is registered, release load, and allow scale to stabilize for two minutes. Re-zero each scale.
   a. If no load is indicated, check power cables, batteries and settings. Repeat test.
   b. If no load is indicated, replace cables and/or batteries. Repeat test.
   c. If no load is still indicated, return scale to repair facility.

## POSITION AIRCRAFT ON SCALES

### CAUTION

Damage to tail strut could occur if aircraft is pushed forward onto platform scales. Pull helicopter aft onto platform only.

### NOTE

- A person shall be positioned in cockpit to operate aircraft brakes whenever helicopter is in motion.
- Tail lockpin shall remain locked during weighing. Keep all helicopter movements as straight as possible.

1. Pull helicopter aft onto scales. Verify all tires are on black weighing portion only.
2. Make sure each scale registers a load. If no load is noted, check scale system.

**POSITION AIRCRAFT ON SCALES** - Continued

3. Move helicopter onto extender plate and allow scales to stabilize for two minutes. Re-zero each scale.

## NOTE

Helicopter brakes shall not be set during leveling or weighing of helicopter.

4. Chock left main tire and carefully disconnect tow bar to prevent damage to scale unit.

### LEVELING OF AIRCRAFT

## NOTE

The significance of leveling to zero degree mark is illustrated by the following correlation: One degree on level plate is equivalent to 1.45 inches in helicopter basic weight center of gravity.

Suspend a plumb bob just inside left hand cargo door STA 309.02, WL 258.5, at BL 35.0. Plumb bob target (level plate) is located on cabin floor WL 206.815 directly below suspension point (Figure 3). The helicopter is level laterally and longitudinally when plumb bob hangs on the outside edge of level plate at zero degree mark.

### LATERALLY LEVELING OF HELICOPTER (PRIMARY METHOD)

To make adjustments laterally, release nitrogen from main tire. Move plumb bob to left and reduce tire pressure. Loosen chocks prior to releasing nitrogen.

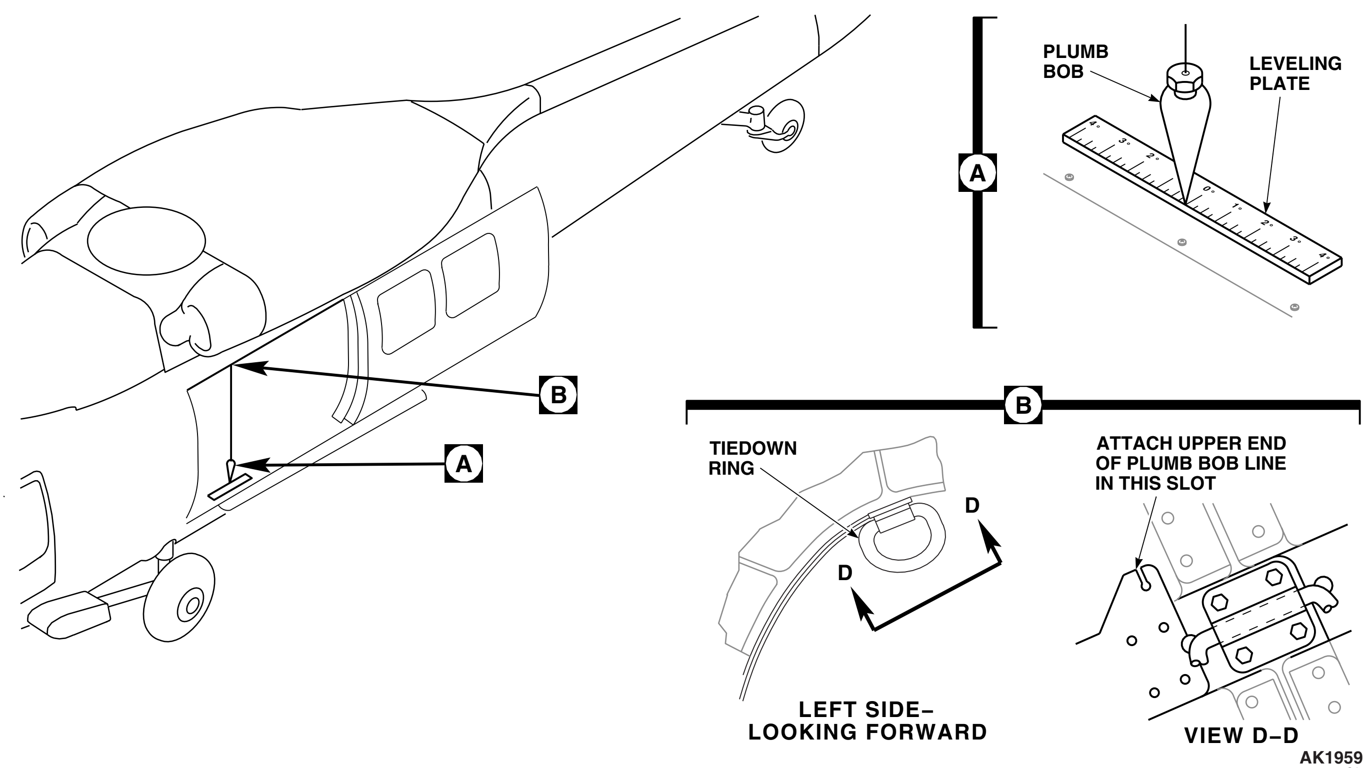

Figure 3. Plumb Bob Placement and Leveling.

## LATERALLY LEVELING OF HELICOPTER (ALTERNATE METHOD)

If required, the helicopter may be laterally leveled by adding/releasing nitrogen from lower stage of main landing gear struts. Measure affected main strut's dimension ″X″ prior to adding/releasing nitrogen to assist in adjusting aircraft after weighing is complete. Record dim ″X″ on Form B under remarks. To remove plumb bob to the left, release nitrogen from left main landing gear's lower stage strut. Loosen chocks prior to releasing nitrogen.

## LONGITUDINALLY LEVELING OF HELICOPTER

1. Measure and record tail strut's stage dimension ″X″. To level, add/release nitrogen from tail landing gear's lower stage strut. To move plum bob forward, raise tail. Loosen chocks and closely monitor aircraft during leveling stage.
2. Once helicopter is level, remove chocks and re-zero scales.

## WEIGHT AND CENTER OF GRAVITY REACTIONS

### NOTE

- Person shall be positioned in cockpit to operate helicopter brakes whenever helicopter is in motion.
- Tail wheel lock pin shall remain locked during weighing. Keep all helicopter movements as straight as possible.

1. Reposition helicopter back onto weighing platforms. Wheels should be centered on each platform. Check that all tires are touching black weighing portion only.

### NOTE

Helicopter brakes shall not be set during leveling or weighing of helicopter.

2. Chock one main tire making sure chocks are not on weighing platform (Figure 4). Disconnect tow bar carefully to prevent damage to scale.
3. Re-verify aircraft is level.

## DETERMINATION OF CENTER OF GRAVITY

1. Temporarily mark center of all three jacking points with a white dot for a reference point.
2. Suspend plumb bob from center of left hand jacking point at STA 247.0. Place adhesive pressure sensitive tape, Item 312, WP 1803 00 on floor and mark point of contact with plumb bob and adhesive pressure sensitive tape with an ″X″.
3. Insert plumb bob alignment tool (WP 1805 00) into left main landing gear axle (Figure 5). Maintain firm stable contact with axle face by holding tool in place. Measure center of left main landing gear axle by lowering plumb bob from center of plumb bob alignment tool end. Place adhesive pressure sensitive tape, Item 312, WP 1803 00 on floor and mark point of contact with plumb bob and adhesive pressure sensitive tape with an ″X″.
4. Suspend plumb bob from center of right hand jacking point at STA 247.0. Place adhesive pressure sensitive tape, Item 312, WP 1803 00 on floor and mark point of contact with plumb bob and adhesive pressure sensitive tape with an ″X″.
5. Insert plumb bob alignment tool (WP 1805 00) into right main landing gear axle. Maintain firm stable contact with axle face by holding tool in place. Measure center of left main landing gear axle by lowering plumb bob from center of plumb bob alignment tool end. Place adhesive pressure sensitive tape, Item 312, WP 1803 00 on floor and mark point of contact with plumb bob and adhesive pressure sensitive tape, with an ″X″.

**DETERMINATION OF CENTER OF GRAVITY** - Continued

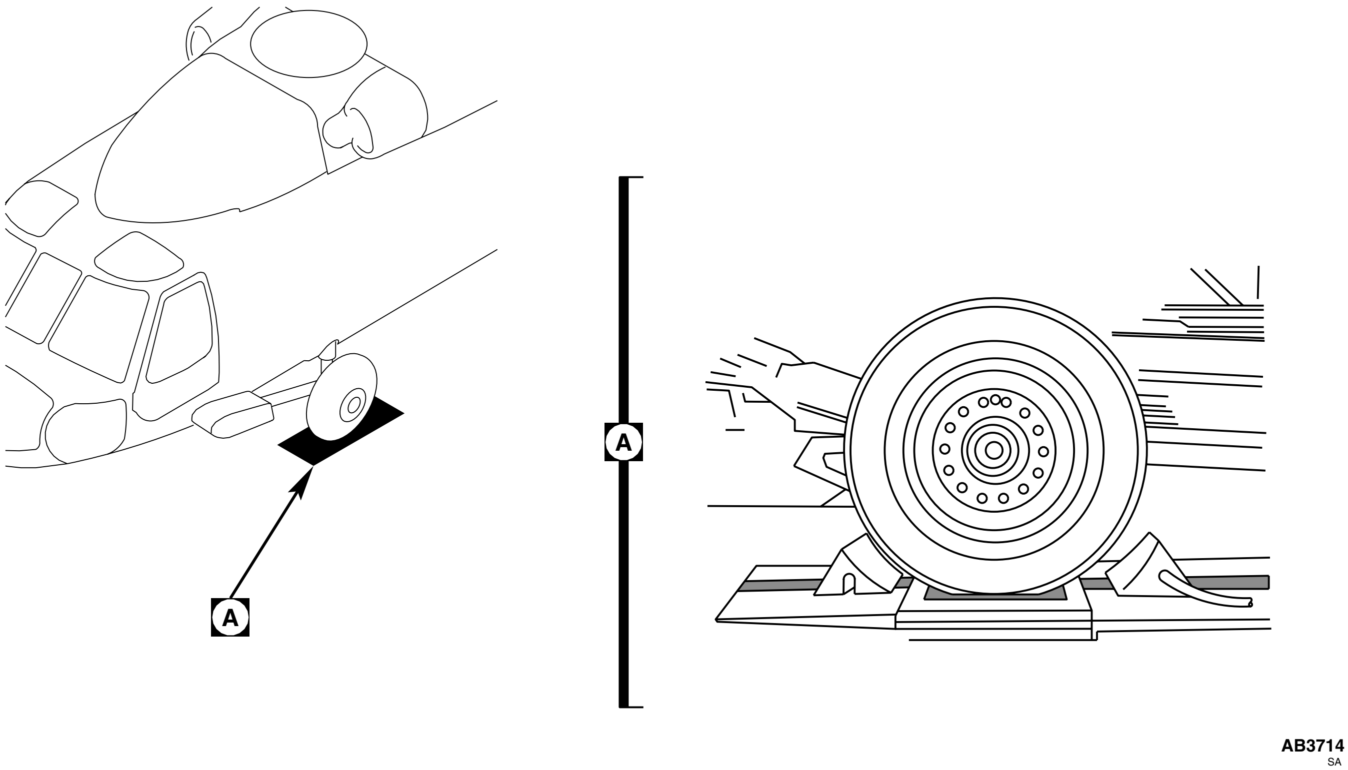

Figure 4. Chock Placement.

6. Suspend plumb bob from tail wheel landing gear jacking point at STA 605.3. Place adhesive pressure sensitive tape, Item 312, WP 1803 00 on floor and markpoint of contact with plumb bob and adhesive pressure sensitive tape, with an ″X″.
7. Insert plumb bob alignment tool (WP 1805 00) into tail wheel landing gear axle. Measure center of left main landing gear axle by lowering plumb bob from center of plumb bob alignment tool end. Place adhesive pressure sensitive tape, Item 312, WP 1803 00 on floor and mark point of contact with plumb bob and adhesive pressure sensitive tape, with an ″X″. Repeat for other side.
8. Record weight value from each scale on Form B. Use either AWBS software or paper format to record two complete weighings for comparison.

## NOTE

- Person shall be positioned in cockpit to operate helicopter brakes whenever helicopter is in motion.
- Tail wheel lock pin shall remain locked during weighing. Keep all helicopter movements as straight as possible.

9. Reposition aircraft onto extender plates.
10. If scale does not return to zero, record non-zero value as ± or (Correction/Tare) on Form B.
11. Re-zero each scale.

**DETERMINATION OF CENTER OF GRAVITY** - Continued

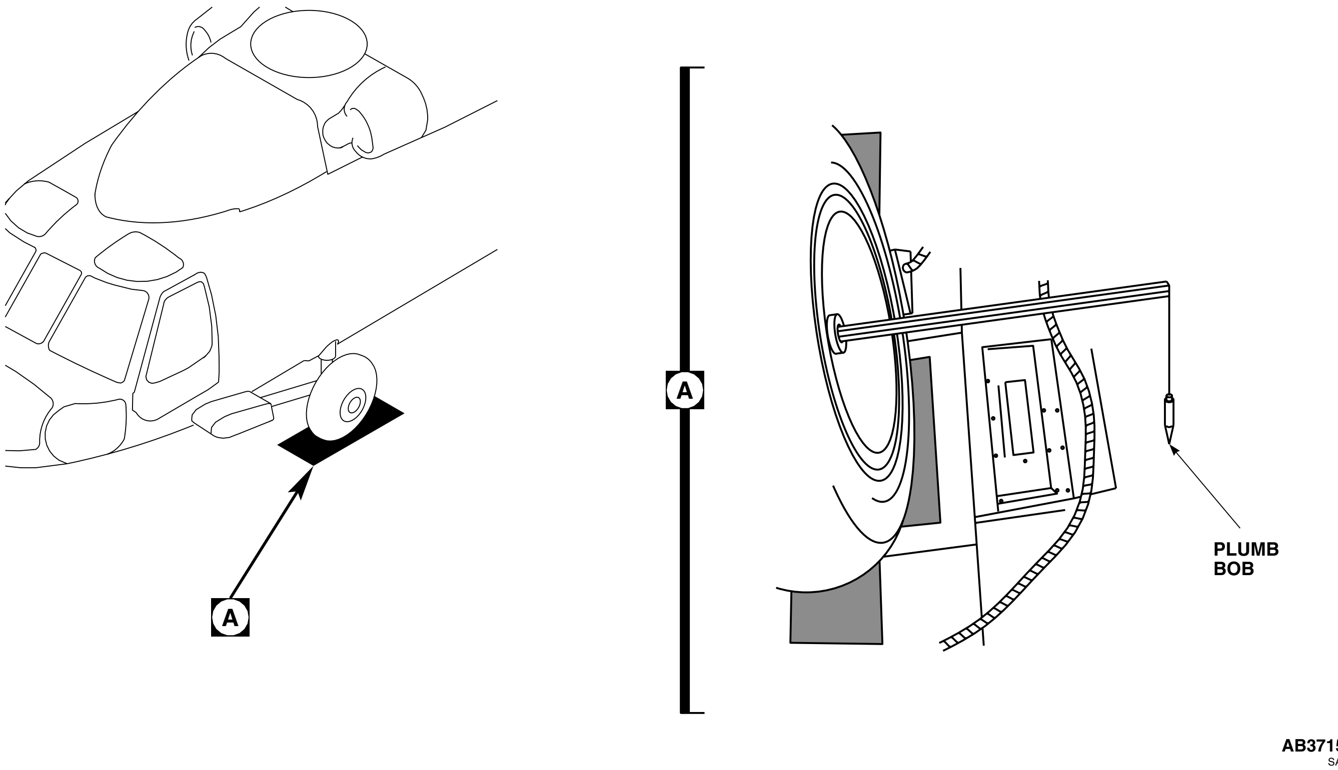

Figure 5. Main Landing Gear With Plumb Bob Alignment Tool.

## MEASUREMENTS

1. Place a thread, Item 341, WP 1803 00 so it passes through center of ″X″ marked at left and right hand jack point locations. Extend thread, sufficiently beyond main landing gear markings. Tighten thread, and secure to floor with adhesive pressure sensitive tape, Item 312, WP 1803 00.

### NOTE

Start at 10 inches on measuring tape to make sure accuracy, remember to subtract starting point.

2. Measure distance from ″X″ marked on adhesive pressure sensitive tape, Item 312, WP 1803 00 representing left main wheel axle to thread, Item 341, WP 1803 00. Move tape in an arc to determine minimum distance to line and record distance to nearest 1/10th inch (Figure 6). Perform same procedure for right main landing gear.
3. Calculate average distance by combining left and right measurements. Record measurement as ″DIM B″ on Form B.
4. Place a thread, Item 341, WP 1803 00 so it passes through center of ″X″ marked at tail jack point locations. Extend thread beyond tail landing gear markings and is closely perpendicular to helicopter’s center line. Tighten thread and secure to floor with adhesive pressure sensitive tape, Item 312, WP 1803 00.

**MEASUREMENTS** - Continued

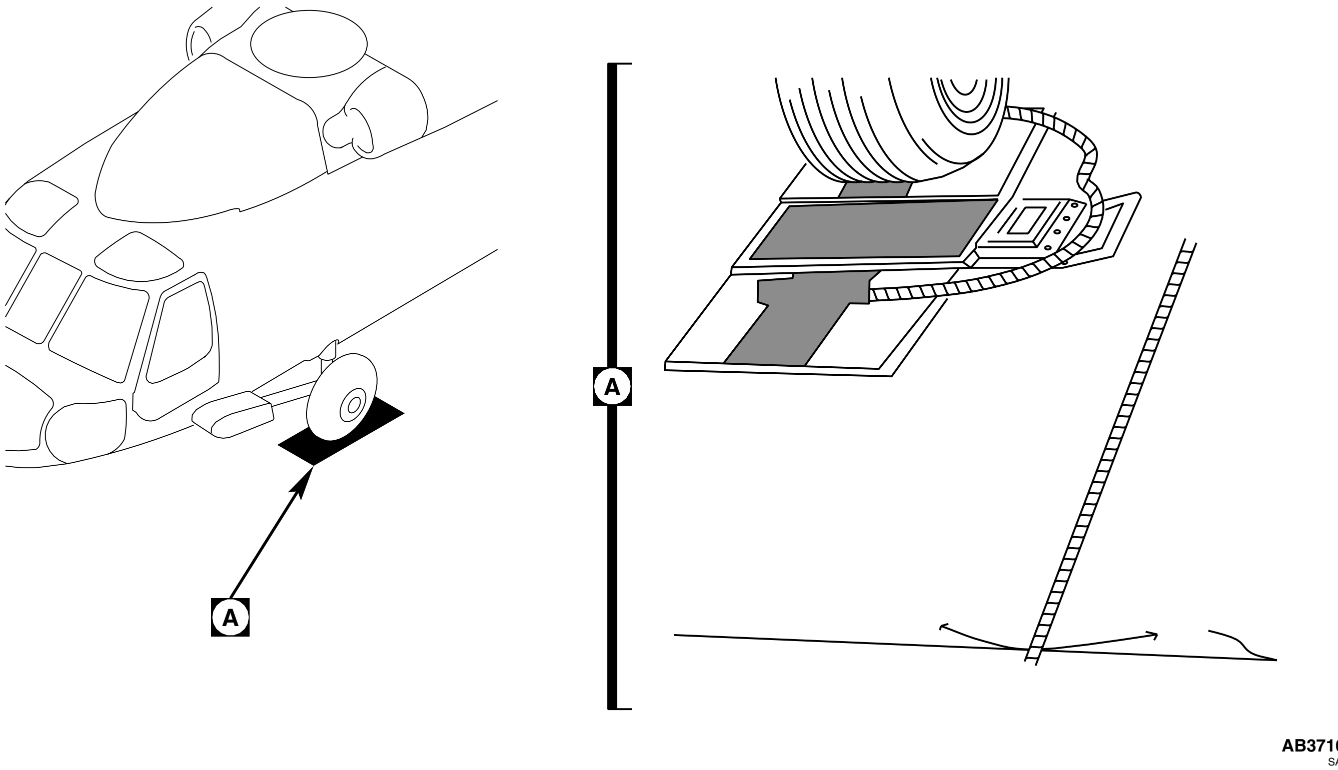

Figure 6. Main Landing Gear Measurement.

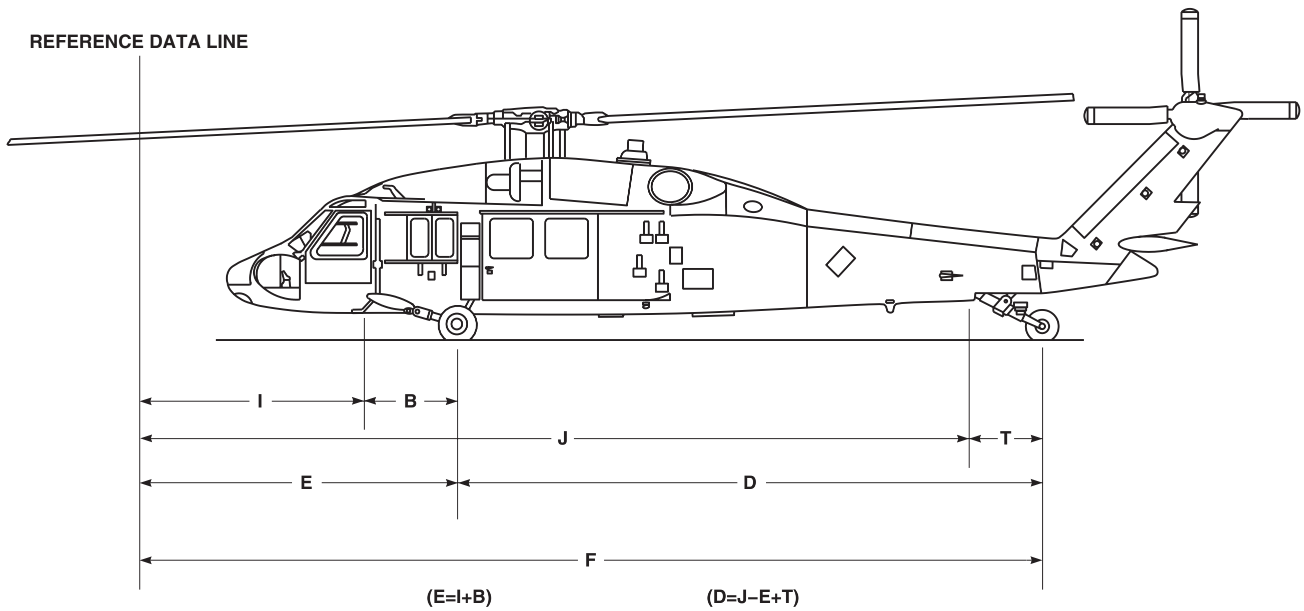
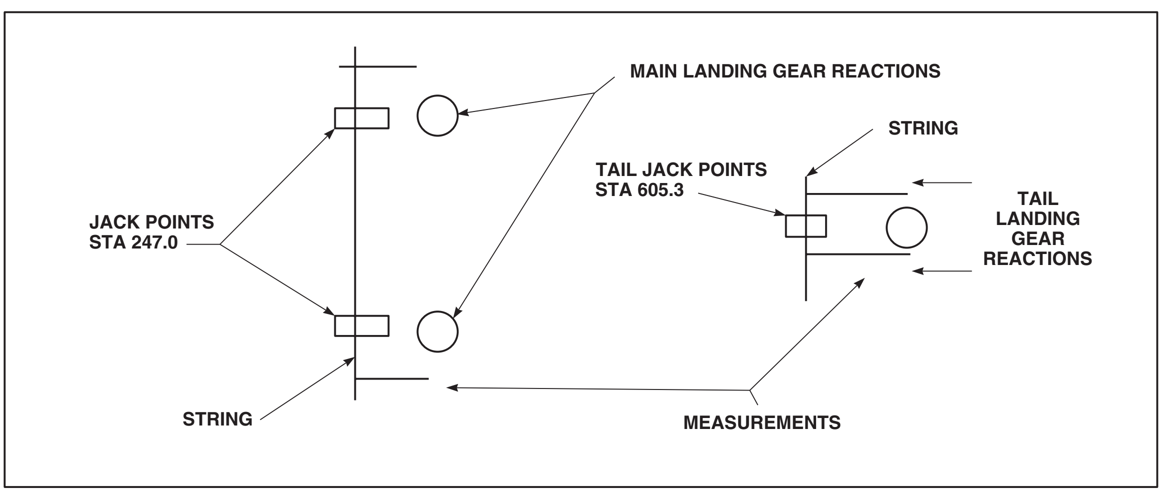
## NOTE

Start at 10 inches on measuring tape to make sure accuracy, remember to subtract starting point.

5. Measure distance from ″X″ marked on adhesive pressure sensitive tape, Item 312, WP 1803 00 representing center of tail wheel on left hand side to thread, Item 341, WP 1803 00 at tail jack point. Move adhesive pressure sensitive tape in an arc to determine minimum distance to line and record distance to nearest 1/10th inch. Perform same procedure for right hand side of tail wheel.
6. Calculate average distance by combining left and right measurements and divide by two.
7. Subtract value of DIM E (Figure 7) from tail jack point STA 605.3 and then average distance from tail wheel axle to tail jack point. Record measurement as ″DIM D″ on Form B. For AWBS users enter value as a negative number. **(Example: 605.3 - 297.0 - 308.3 + 37.6 - 345.9 DIM ″D″ = 345.9).**
8. Repeat weighing procedures for each successive weighing, denoting ″X″ with corresponding weighing, i. e. all ″Xs″ for second weighing should be denoted with No. 2, the third weighing with a No. 3 (if required). Verify that helicopter is still laterally and longitudinally level each time. Adjust as needed.
9. Compare results of first and second weighing. Acceptable weight tolerance and C.G. between each weighing is 0.25% (0.0025) and 0.20″ longitudinal C.G. Once two acceptable weighings are achieved, average the two sets of data to generate a record Form B that will be posted on Chart C. **(Example: If total reading was 11,600 pounds for the first weighing, tolerance for the second weighing is ± 29 pounds. 11,600 x.0025 = 29 or a range from 11,571 to 11, 629 pounds.**

**MEASUREMENTS** - Continued





AB3717
SA

Figure 7. Calculations.

**MEASUREMENTS** - Continued

10. If comparison between any two weighings (total as weighed) exceeds 0.25% value, repeat step 1 through step 9., until any two weighings are within 0.25% of each other.
11. Compare results of longitudinal C.G. between weights as well. If results vary by more then 0.20 of one inch of C.G., repeat weighings until criterion is also met.
12. After completion of two acceptable weighings, average data from two weighings, generate a record Form B, and post to Chart C.
13. Service tires and/or struts (WP 1598 00 or WP 1599 00).
14. Unlock tail wheel lockpin, remove aircraft from scales and remove all equipment.

## SPECIAL INSPECTION REQUIREMENTS

### Scope

This section contains requirements for standards of serviceability applicable to the helicopter. The inspection requirements are in these manuals: TM 1-1520-237-PMD, Daily Inspection, TM 1-1520-237-PMS, Preventive Maintenance Inspections, TM 1-1520-237-PMI, Phase Maintenance Inspections, and WP 1688 00, WP 1689 00, WP 1690 00, WP 1691 00, WP 1692 00, WP 1693 00, WP 1694 00, WP 1695 00, WP 1696 00, WP 1697 00, WP 1698 00, WP 1699 00, WP 1700 00, WP 1701 00, WP 1702 00, WP 1703 00, WP 1704 00, WP 1705 00, WP 1706 00, WP 1707 00, WP 1708 00, WP 1709 00, WP 1710 00, WP 1711 00, WP 1712 00, WP 1713 00, WP 1714 00, WP 1715 00, WP 1716 00, WP 1717 00, WP 1718 00, WP 1719 00, WP 1720 00, WP 1721 00, WP 1722 00,

**SPECIAL INSPECTION REQUIREMENTS** - Continued

WP 1723 00, WP 1724 00, WP 1725 00, WP 1726 00, WP 1727 00, WP 1728 00, WP 1729 00, WP 1730 00, WP 1731 00, WP 1732 00, WP 1733 00, WP 1734 00, WP 1735 00, WP 1736 00, WP 1737 00, WP 1738 00, WP 1739 00, and WP 1740 00, Special Inspections.

### Special Inspection Description

The special inspections contained herein supplement the scheduled inspections in Preventive Maintenance Services Checklists, TM 1-1520-237-PMD, TM 1-1520-237-PMS, and TM 1-1520-237-PMI. These inspections are required at intervals that are not the same as the scheduled inspections. The special inspections include, but are not limited to:

**NOTE**

When unusual local conditions of environment, utilization, mission, experience of flight crew and maintenance personnel, or periods of inactivity etc. are encountered, the Commander or Maintenance Officer will, at his discretion, increase the scope and/or frequency of inspections necessary to be sure of safe flight. All inspection requirements must be completed in accordance with TM 1-1500-328-23.

1. Inspections which depend upon specific incidents, such as a hard landing or overspeed. Immediate inspection is required for further flight.
2. Inspections which depend upon specific conditions, such as main rotor head torque check.
3. Inspections based on calendar time.

### Inspection Requirements

Inspection requirements establish when certain equipment is to be inspected and the condition to be sought. Compliance with the inspections is required to be sure that latent problems are discovered and corrected before malfunctioning or serious trouble results.

### Standards of Serviceability

Standards of serviceability to be used in the day to day inspection and maintenance of the helicopter can be found as fits, tolerances, wear limits, and specifications in the helicopter maintenance manuals. Standards of serviceability for transfer of helicopter are contained in TM 1-1500-328-23.

### Scheduling

Refer to TM 1-1500-328-23 for scheduling.

### Forms, Records, and Worksheets

Refer to DA PAM 738-751 for applicable forms, records, and worksheets. Inspections, references, and frequencies are listed in Sample DA Form 2408-18, Equipment Inspection List (Figure 1).

### Work Platforms

Work platforms located on engine cowlings provide access to the engines. Each platform is capable of supporting a static weight of 400 pounds.

## AIRCRAFT GENERAL

## ENGINE OUTPUT SHAFT INSPECTION

**This WP supersedes WP 1688 00, dated 17 April 2006.**

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Powerplant Repairer's Toolkit, 5180-99-B13
Torque Wrench, 30 - 200 in. lbs.

**Material/Parts**
Sealing Compound, Item 285, WP 1803 00

**Personnel Required**
Aircraft Powerplant Repairer MOS 15B (1)
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-6625-724-13&P
WP 0481 00
WP 0484 00
WP 1803 00

### ENGINE OUTPUT SHAFT INSPECTION - 1 TO 3 HOURS (70361–08004–042, –043)

**NOTE**

Whenever engine output shaft is replaced, do a torque check of bolts connecting flexible coupling to input module flange after the first 1 to 3 flight-hours.

1. Remove air inlet assembly (WP 0484 00).

**WARNING**

**CSI**

Torque stabilization is a critical characteristic.

**NOTE**

Perform engine output shaft vibration check whenever engine output shaft is removed or disconnected (TM 1-6625-724-13&P).

2. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, check torque on three bolts connecting flexible coupling to input module flange while holding nuts as follows:

   a. **QA** Initially check torque of bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nuts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

   b. **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ALL BOLTS AND ASSEMBLY HARDWARE CONNECTING DISC PACK TO INPUT FLANGE (WP 0481 00).** If input module flange, 70351-08206-041, with nutplates is used, replace with input module flange, 70351-08206-102, if available. If input module flange, 70351-08206-041, is used, after torque has stabilized, place a drop of sealing compound, Item 285, WP 1803 00, to threads of bolts adjacent to nutplates. Make sure compound seeps into nutplates. Perform engine output shaft vibration check if shaft was disconnected (TM 1-6625-724-13&P).

**ENGINE OUTPUT SHAFT INSPECTION - 1 TO 3 HOURS (70361–08004–042, –043)** - Continued

c. **QA** Check bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nut. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 1 to 3 flight hours until torque stabilizes.

e. **IF TORQUE DOES NOT STABILIZE AFTER THIRD CONSECUTIVE TORQUE CHECK, REPLACE THREE BOLTS AND ASSEMBLY HARDWARE CONNECTING DISC PACK TO INPUT MODULE FLANGE (WP 0481 00)**. If input module flange, 70351-08206-041, with nutplates is used, replace with input module flange, 70351-08206-102, if available. If input module flange, 70351-08206-041, is used, after torque has stabilized, place a drop of sealing compound, Item 285, WP 1803 00, to threads of bolts adjacent to nutplates. Make sure compound seeps into nutplates. Balance engine output shaft (TM 1-6625-724-13&P).

3. Check torque on three nuts securing flexible coupling to engine output shaft by torquing nuts in tightening direction only while holding bolts as follows:

a. **QA** Initially check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

b. **IF TORQUE ON ANY ONE NUT IS BELOW 90 INCH-POUNDS, REPLACE ENGINE OUTPUT SHAFT.** Perform an engine output shaft balance check if shaft was disconnected (TM 1-6625-724-13&P).

c. **QA** Check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

d. **IF TORQUE ON ANY NUT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 1 to 3 flight hours until torque stabilizes.

e. If torque does not stabilize after third consecutive torque check, replace engine output shaft assembly. Balance engine output shaft (TM 1-6625-724-13&P).

4. On helicopters with engine output drive shaft, 70361-08004-04, or 70361-08004-043, if torque has not stabilized check DA Form 2408-13-1 to make sure torque check of bolts connecting disc pack coupling to input module flange is due after initial ground run and after 1 to 3 flight hours. Also check DA Form 2408-13-1 to make sure torque check of bolts connecting disc pack coupling to engine output shaft is due after initial ground run and after 1 to 3 flight hours.

**ENGINE OUTPUT SHAFT INSPECTION - 3 TO 13 HOURS (70361–08004–041)**

## NOTE

Whenever engine output shaft is replaced, do a torque check of bolts connecting flexible coupling to input module flange after the first 3 to 13 flight-hours.

1. On helicopters with engine output drive shaft, 70361-08014-041, check torque on six bolts securing flange/coupling to engine output shaft in tightening direction only after first 3 to 13 flight hours as follows:

a. **QA** Initially check bolts in tightening direction. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

b. **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ALL SIX BOLTS AND FLANGE/COUPLING.**

c. **QA** Check bolts in tightening direction. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 3 to 13 flight hours until torque stabilizes.

e. If torque does not stabilize after third consecutive torque check, replace all six bolts and flange/coupling.

**END OF WORK PACKAGE**

## UNIT LEVEL

## GEAR BOXES, MOUNTING BOLTS TORQUE CHECK - 9 TO 11 HOURS

**This WP supersedes WP 1689 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Powerplant Repairer's Toolkit, 5180-99-B13
Gloves
Goggles/Face Shield

**Material/Parts**
Acetone, Technical, Item 5, WP 1803 00
Corrosion Preventive Compound, Item 106, WP 1803 00
Epoxy Primer Coating Kit, Item 120, WP 1803 00
Polyurethane Coating, Item 231, WP 1803 00
Sealing Compound, Item 273, WP 1803 00

**Personnel Required**
Aircraft Powerplant Repairer MOS 15B (1)
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 0612 00
WP 0659 00
WP 0681 00
WP 1803 00

### MAIN GEAR BOX MOUNTING BOLTS TORQUE CHECK - 9 TO 11 HOURS

**NOTE**

- Whenever a main gear box or mounting bolt/bolts is replaced, do a mounting bolt torque check after the first 9 to 11 flight-hours.
- Turn torque wrench in the tightening direction to check torques.

1. Check main gear box mounting bolts for proper torque (WP 0612 00).

**WARNING**

**CSI**

Torque stabilization check is a critical characteristic.

2. If any torques were below minimums retorque bolts.
3. Repeat mounting bolts torque check every 9 to 11 flight hours until torque stabilizes. If torque has not stabilized after 3 consecutive checks, replace hardware and repeat torque stabilization check.
4. After torque has been stabilized, do this:

**WARNING**

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/faceshield. Avoid repeated or prolonged contact. Use only in well-ventilated areas (or use approved respirator as determined by local safety/ industrial hygiene personnel). Keep away from open flames, sparks, hot surfaces or other sources of ignition.

a. Remove corrosion preventive compound using technical acetone, Item 5, WP 1803 00.

**MAIN GEAR BOX MOUNTING BOLTS TORQUE CHECK - 9 TO 11 HOURS** - Continued

b. Apply sealing compound, Item 273, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

c. Apply epoxy primer coating kit, Item 120, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

d. Apply one coat of polyurethane coating, Item 231, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

e. Apply two coats of corrosion preventive compound, Item 106, WP 1803 00, to gear box attachment feet.

## INTERMEDIATE GEAR BOX MOUNTING BOLTS TORQUE CHECK - 9 TO 11 HOURS

### NOTE

- Whenever intermediate box is replaced or the torque on mounting bolts is broken, do a mounting bolt torque check after the first 9 to 11 flight-hours.
- Turn torque wrench in the tightening direction to check torques.

1. Check intermediate gear box mounting bolts for proper torque (WP 0659 00).

### WARNING

### CSI

Torque stabilization check is a critical characteristic.

2. If any torques were below minimums retorque bolts.
3. Repeat mounting bolts torque check every 9 to 11 flight hours until torque stabilizes. If torque has not stabilized after three consecutive checks, replace hardware and repeat torque stabilization check.
4. After torque has been stabilized, do this:

### WARNING

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/faceshield. Avoid repeated or prolonged contact. Use only in well-ventilated areas (or use approved respirator as determined by local safety/industrial hygiene personnel). Keep away from open flames, sparks, hot surfaces or other sources of ignition.

a. Remove corrosion preventive compound using technical acetone, Item 5, WP 1803 00.

b. Apply sealing compound, Item 273, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

c. Apply epoxy primer coating kit, Item 120, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

d. Apply one coat of polyurethane coating, Item 231, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

e. Apply two coats of corrosion preventive compound, Item 106, WP 1803 00, to gear box attachment feet.

## TAIL GEAR BOX MOUNTING BOLTS TORQUE CHECK - 9 TO 11 HOURS

### NOTE

- Whenever a tail gear box is replaced or the torque on mounting bolts is broken, do a mounting bolt torque check after the first 9 to 11 flight-hours.
- Turn torque wrench in the tightening direction to check torques.

1. Check tail gear box mounting bolts for proper torque (WP 0681 00).

### WARNING

### CSI

Torque stabilization check is a critical characteristic.

2. If any torques were below minimums retorque bolts.
3. Repeat mounting bolts torque check every 9 to 11 flight hours until torque stabilizes. If torque has not stabilized after three consecutive checks, replace hardware and repeat torque stabilization check.
4. After torque has been stabilized, do this:

### WARNING

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/faceshield. Avoid repeated or prolonged contact. Use only in well-ventilated areas (or use approved respirator as determined by local safety/ industrial hygiene personnel). Keep away from open flames, sparks, hot surfaces or other sources of ignition.

a. Remove corrosion preventive compound using technical acetone, Item 5, WP 1803 00.

b. Apply sealing compound, Item 273, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

c. Apply epoxy primer coating kit, Item 120, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

d. Apply one coat of polyurethane coating, Item 231, WP 1803 00, to joints around boltheads, nuts and washers. Allow to dry.

e. Apply two coats of corrosion preventive compound, Item 106, WP 1803 00, to gear box attachment feet.

5. After torque has been stabilized, do this:

## GENERAL

### NOTE

Whenever a main rotor head (new or used) is installed or the main rotor head is lowered and raised, do a main rotor head torque check every 9 to 11 flight hours until stabilized. The expression ″main rotor head torque check″ as used in this step refers to the items and torque values shown in Figure 1, Sheet 1. This figure also defines the two zones referred to in this step.

1. Whenever spindle attachment bolts are installed, retorque them after 9 to 11 flight hours until torque has stabilized.
2. Whenever damper attachment bolts are installed, retorque them after 9 to 11 flight hours until torque has stabilized.
3. Whenever any spindle to horn attachment bolts are removed or replaced, or when a replacement spindle assembly or horn is installed, or when antiflap assembly is removed or replaced, do a torque check on spindle to horn attachment bolts every 9 to 11 flight hours until torque has stabilized.
4. During checks, record number of bolts at each location below minimum torque to move each bolt. Turn torque wrench in tightening direction to check. Also, follow numbered sequence on main rotor shaft nut and upper and lower pressure plate when checking torque.
5. To stabilize a fastener at required torque level, repeat specified torquing sequence until bolts do not move at required torque.
6. The 11 hour flight interval is the maximum and shall not be exceeded. Torque checks at less than 9 flight hours are permissible in order to avoid mission interruption. Torque checks done at less than 9 flight hours, however, are not valid for purposes of stabilization. For stabilization a minimum flight time of 9 hours is required.
7. Torque ranges for components inspected during 9 to 11 flight hours main rotor head torque check are different from the components' installation torque range.

**GENERAL** - Continued

8. Torque check of Zone I and Zone II are independent. When bolts in either zone are stabilized above minimum torque value, torque check is complete for that zone.

## 9 TO 11 HOURS HUB TO SHAFT EXTENSION BOLTS

1. If blade deice system is not installed, remove bifilar cover (WP 0573 00).
2. If blade deice system is installed, remove main rotor blade deice distributor (WP 1220 00).
3. Remove lockring (WP 0547 00).

### CAUTION

Prior to torque check, identify four expandable pins. Do not torque expandable pins during this check. Damage to main rotor hub, hub shaft extension, and expandable pins will occur.

4. Check torque on twelve NAS bolts holding hub to shaft extensions.
5. **IF TORQUE IS 228 FOOT-POUNDS OR GREATER, TORQUE HAS STABILIZED. TORQUE TWELVE NAS BOLTS TO 262 FOOT-POUNDS. TORQUE CHECK IS COMPLETE.**
6. **IF TORQUE IS LESS THAN 228 FOOT-POUNDS, TORQUE HAS NOT STABILIZED. TORQUE TWELVE NAS BOLTS HOLDING HUB TO SHAFT EXTENSION TO 262 FOOT-POUNDS. CHECK TORQUE ON ALL ZONE I COMPONENTS. REPEAT TORQUE CHECK AFTER 9 TO 11 FLIGHT HOURS.**
7. If torque has not stabilized on fourth consecutive torque check, do this:
   a. Remove main rotor blades (WP 0576 00).
   b. Remove main rotor head (WP 0547 00).
   c. Inspect cones, shaft extension, cone seats, bolts, upper pressure plate, lower pressure plate, and main rotor shaft nut for nicks, gouges, dents, or distortion which might prevent correct installation and torquing of parts.
   d. Replace parts as required and repeat torque check after 9 to 11 flight hours.
8. Install lockring (WP 0547 00).
9. If blade deice system is not installed, install bifilar cover (WP 0573 00).
10. If blade deice system is installed, install main rotor blade deice distributor (WP 1220 00).
11. Check area for cleanness and foreign objects.

## 9 TO 11 HOURS HUB TO SHAFT EXPANDABLE PINS

1. Open main rotor pylon sliding cover.
2. If blade deice system is not installed, remove bifilar cover (WP 0573 00).
3. If blade deice system is installed, remove main rotor blade deice distributor (WP 1220 00).
4. Remove lockring (WP 0547 00).
5. Check torque on nuts on expandable pins. **TORQUE MUST NOT BE LESS THAN 900 INCH-POUNDS.** Use hex wrench to prevent pins from turning (Figure 1, Sheet 1).
6. **IF TORQUE IS 900 INCH-POUNDS OR GREATER, TORQUE HAS STABILIZED. TORQUE ALL NUTS TO 1200 INCH-POUNDS. TORQUE CHECK IS COMPLETE.**

**9 TO 11 HOURS HUB TO SHAFT EXPANDABLE PINS** - Continued

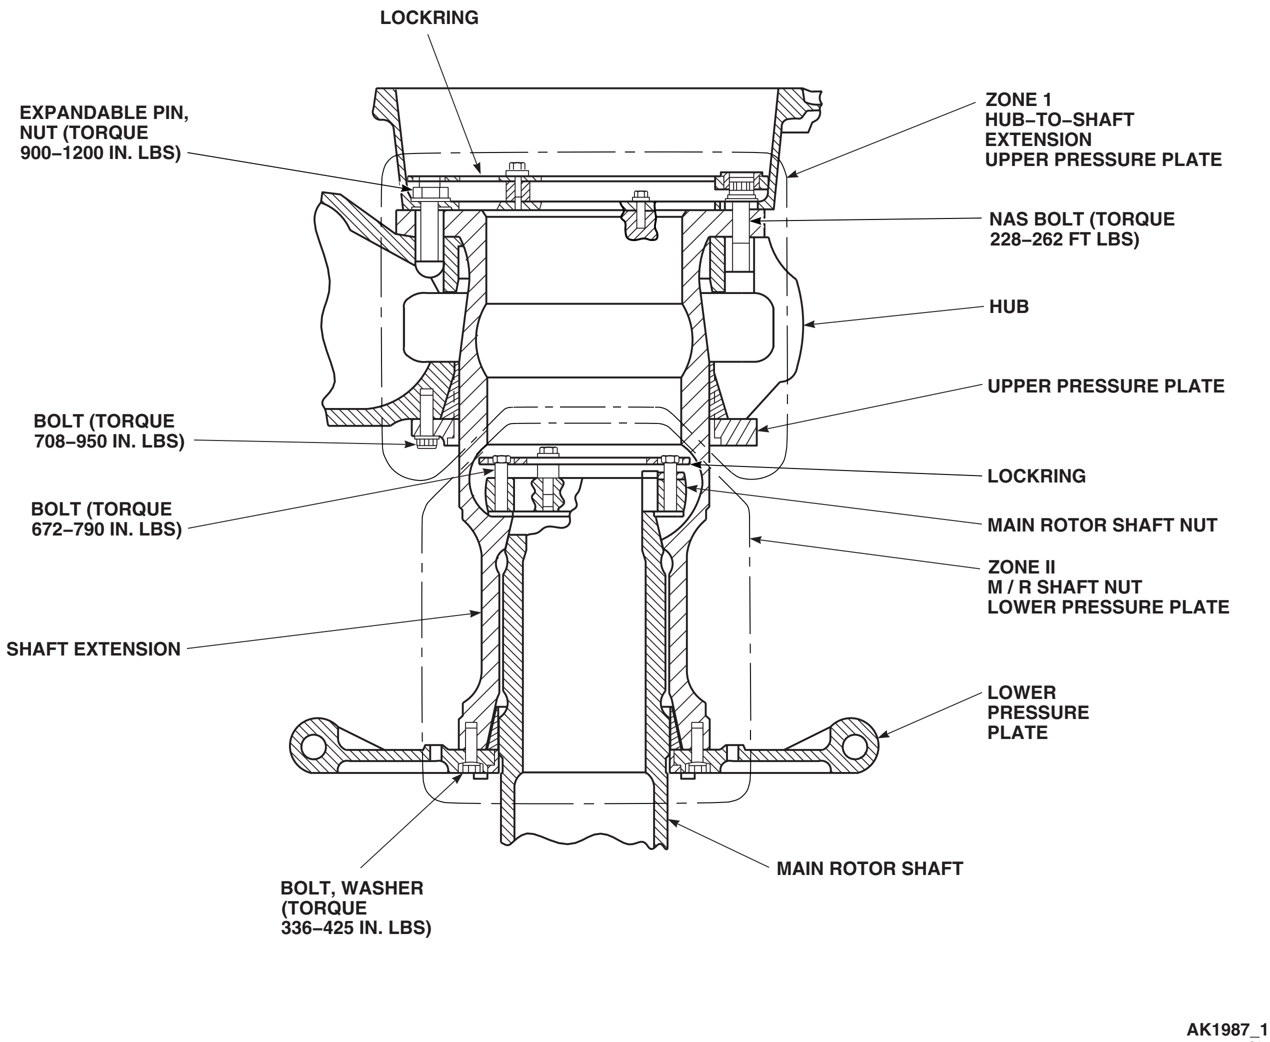

Figure 1. Main Rotor Head Torque Check - 9 to 11 Hours. (Sheet 1 of 2)

7. **IF TORQUE IS LESS THAN 900 INCH-POUNDS, TORQUE HAS NOT STABILIZED. TORQUE ALL NUTS TO 1200 INCH-POUNDS. CHECK TORQUE ON ALL ZONE I COMPONENTS. REPEAT TORQUE CHECK AFTER 9 TO 11 FLIGHT HOURS.**

8. If torque has not stabilized on fourth consecutive torque check, do this:

   a. Remove expandable pins and inspect for cleanness and damage (WP 0576 00).

   b. Remove main rotor blades (WP 0576 00).

   c. Remove main rotor head (WP 0547 00).

   d. Inspect cones, shaft extension, cone seats, bolts, upper pressure plate, lower pressure plate, and main rotor shaft nut for nicks, gouges, dents, or distortion, which might prevent correct installation and torquing of bolts.

**9 TO 11 HOURS HUB TO SHAFT EXPANDABLE PINS** - Continued

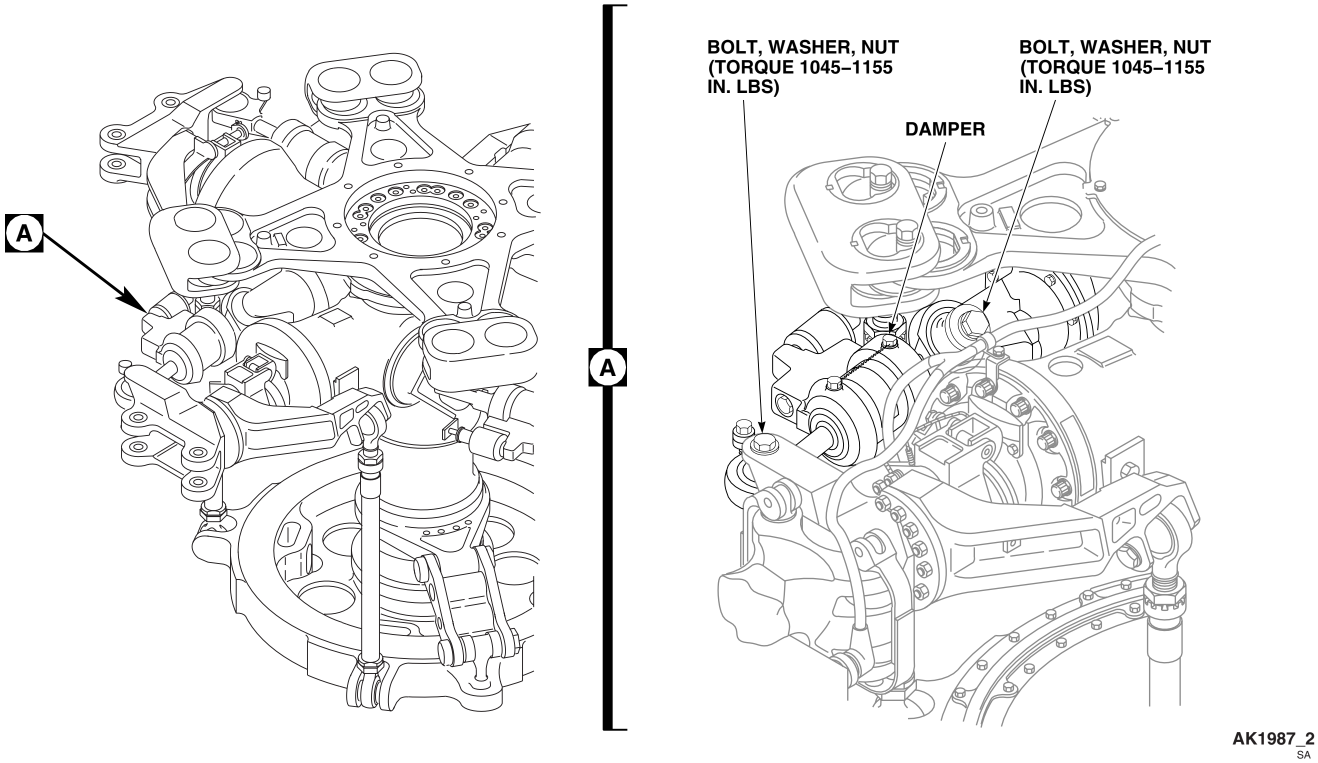

Figure 1. Main Rotor Head Torque Check - 9 to 11 Hours. (Sheet 2 of 2)

e. Replace parts as required and repeat torque check after 9 to 11 flight hours.

9. Install lockring (WP 0547 00).
10. If blade deice system is not installed, install bifilar cover (WP 0573 00).
11. If blade deice system is installed, install main rotor blade deice distributor (WP 1220 00).
12. Check area for cleanness and foreign objects.
13. Close main rotor pylon sliding cover.

**9 TO 11 HOURS PRESSURE PLATE BOLTS**

1. Check torque on lower pressure plate bolts in numerical sequence. **TORQUE MUST NOT BE LESS THAN 336 INCH-POUNDS.**
2. **IF TORQUE IS 336 INCH-POUNDS OR GREATER, OR IF TORQUE IS LESS THAN 336 INCH-POUNDS ON TWO OR LESS BOLTS, TORQUE HAS STABILIZED. TORQUE ALL BOLTS TO 425 INCH-POUNDS.**
3. Measure gap between lower pressure plate and shaft extension using feeler gage. **MINIMUM GAP IS 0.001-INCH. A GAP DISTANCE OF NOT OVER 0.035-INCH IS ALLOWED BETWEEN SMALLEST AND LARGEST GAP AREAS**. If gap is beyond limits, lower pressure plate and repeat torquing sequence (WP 0547 00).
4. If torque is less than 336 inch-pounds on three or more bolts, torque has not stabilized. Measure gap between lower pressure plate and shaft extension using feeler gage. **MINIMUM GAP IS 0.001-INCH. A GAP DISTANCE OF NOT OVER 0.035-INCH IS ALLOWED BETWEEN SMALLEST AND LARGEST GAP AREAS. IF GAP IS**

**9 TO 11 HOURS PRESSURE PLATE BOLTS** - Continued

**BEYOND LIMITS, LOWER PRESSURE PLATE AND REPEAT TORQUING SEQUENCE (WP 0547 00). IF GAP IS WITHIN LIMITS, TORQUE ALL BOLTS TO 425 INCH-POUNDS. CHECK TORQUE ON ALL ZONE II COMPONENTS. REPEAT TORQUE CHECK AFTER 9 TO 11 FLIGHT HOURS.**

5. If torque has not stabilized on fourth consecutive torque check, do this:
   a. Remove main rotor blades (WP 0576 00).
   b. Remove main rotor head (WP 0547 00).
   c. Inspect cones, shaft extension, cone seats, bolts, upper pressure plate, lower pressure plate and main rotor shaft nut for nicks, gouges, dents, or distortion which might prevent correct installation and torquing of parts.
   d. Replace parts as required and repeat torque check after 9 to 11 flight hours.
6. Check torque on upper pressure plate bolts in numerical sequence. **TORQUE MUST NOT BE LESS THAN 708 INCH-POUNDS**.
7. **IF TORQUE IS 708 INCH-POUNDS, OR GREATER, OR IF TORQUE IS LESS THAN 708 INCH-POUNDS ON ONE BOLT, TORQUE HAS STABILIZED. TORQUE ALL BOLTS TO 950 INCH-POUNDS. TORQUE CHECK IS COMPLETE.**
8. **IF TORQUE IS LESS THAN 708 INCH-POUNDS ON TWO OR MORE BOLTS, TORQUE HAS NOT STABILIZED. TORQUE ALL BOLTS TO 950 INCH-POUNDS. CHECK TORQUE ON ALL ZONE I COMPONENTS. REPEAT TORQUE CHECK AFTER 9 TO 11 FLIGHT HOURS.**
9. If torque has not stabilized on fourth consecutive torque check, do this:
   a. Remove main rotor blades (WP 0576 00).
   b. Remove main rotor head (WP 0547 00).
   c. Inspect cones, shaft extension, cone seats, bolts, upper pressure plate, lower pressure plate, and main rotor shaft nut for nicks, gouges, dents, or distortion which might prevent correct installation and torquing of parts.
   d. Replace parts as required and repeat torque check after 9 to 11 flight hours.

**9 TO 11 HOURS SPINDLE TO HORN ATTACHMENT BOLTS**

## WARNING

## CSI

Torque stabilization is a critical characteristic.

1. Remove sealing compound using a locally-made nonmetallic scraper.
2. Using locally-made spindle horn nut torque adapter, (Figure 205, WP 1805 00), check torque of nuts. **TORQUE MUST NOT BE LESS THAN 281 INCH-POUNDS. RETORQUE ALL LOOSE NUTS TO 304 - 336 INCH-POUNDS.**
3. Reseal with sealing compound, Item 273, WP 1803 00.
4. Repeat torque check at 9 to 11 flight hours until stabilized. **IF TORQUE IS 281 INCH POUNDS OR GREATER, TORQUE HAS STABILIZED.**
5. If on the fourth torque check any bolt has a breaking torque less than 281 inch pounds, disassemble attachment horn and visually inspect clamped parts and bolts for gouges, nicks, dents or distortion which might interfere with clamp up. Replace parts as required. Repeat torque check every 9 to 11 flight hours until stabilized.
6. Reseal with sealing compound, Item 273, WP 1803 00.

### 9 TO 11 HOURS ANTIFLAP TO HORN ATTACHMENT BOLTS

## WARNING

## CSI

Torque stabilization is a critical characteristic.

1. Remove sealing compound using locally made nonmetallic scraper.
2. Using locally-made spindle horn nut torque adapter, (Figure 205, WP 1805 00) check torque of antiflap to spindle horn nuts. **TORQUE MUST NOT BE LESS 281 INCH-POUNDS. RETORQUE ALL LOOSE NUTS TO 304 - 336 INCH-POUNDS.**
3. Reseal with sealing compound, Item 273, WP 1803 00.
4. Repeat torque check at 9 to 11 flight hours until stabilized. If torque is 281 inch-pounds or greater, torque has stabilized.
5. If on fourth torque check any bolt has a breaking torque less than 281 inch-pounds, disassemble antiflap to attachment horn and visually inspect clamped parts and bolts for gouges, nicks, dents, or distortion which might interfere with clamp up. Replace parts as required. Repeat torque check every 9 to 11 flight hours until stabilized.
6. Reseal with sealing compound, Item 273, WP 1803 00.

### 9 TO 11 HOURS DAMPER ATTACHMENT BOLTS

1. Remove sealing compound and cotter pin from damper attachment bolt.
2. **TORQUE DAMPER ATTACHMENT BOLT NUT TO 1045 - 1155 INCH-POUNDS (Figure 1, Sheet 2, Detail A).**
3. **QA** Install cotter pin. Seal area around bolthead and nut with sealing compound, Item 273, WP 1803 00.
4. If torque has not stabilized, repeat torque check, 9 to 11 flight hours.
5. If torque has not stabilized after fourth consecutive torque check, replace attachment hardware. Repeat torque check every 9 to 11 flight hours until stabilized.

### 9 TO 11 HOURS MAIN ROTOR HEAD SHAFT NUT BOLTS

1. Check torque on bolts holding main rotor shaft nut in numerical sequence as follows:
   a. **IF TORQUE IS LESS THAN 288 INCH-POUNDS ON THREE OR MORE BOLTS, TORQUE HAS NOT STABILIZED. GO TO STEP e.**
   b. **IF TORQUE IS LESS THAN 576 INCH-POUNDS ON EIGHT OR MORE BOLTS, TORQUE HAS NOT STABILIZED. GO TO STEP e.**
   c. **IF TORQUE IS LESS THAN 672 INCH-POUNDS, TORQUE HAS NOT STABILIZED. TORQUE ALL BOLTS TO 790 INCH-POUNDS. CHECK TORQUE ON ALL ZONE II COMPONENTS. REPEAT TORQUE CHECK AFTER 9 TO 11 FLIGHT HOURS.**
   d. **IF TORQUE IS 672 INCH-POUNDS OR GREATER, TORQUE HAS STABILIZED. TORQUE ALL BOLTS TO 790 INCH-POUNDS. TORQUE CHECK IS COMPLETE.**
   e. If torque has not stabilized after fourth consecutive torque check, or if bolts failed torque checks in step 1. a. or step 1. b., do this:
      (1) Remove main rotor blades (WP 0576 00).
      (2) Remove main rotor head (WP 0547 00).

**9 TO 11 HOURS MAIN ROTOR HEAD SHAFT NUT BOLTS** - Continued

(3) Inspect cones, shaft extension, cone seats, bolts, upper pressure plate, lower pressure plate, and main rotor shaft nut for nicks, gouges, dents or distortion which might prevent correct installation and torquing of parts.

(4) Replace parts as required and repeat torque check after 9 to 11 flight hours.

2. The lower pressure plate bolts may have dropped in torque value, as a result of tightening main rotor shaft nut bolts. Recheck torque on lower pressure plate bolts. Refer to, 9 TO 11 HOURS PRESSURE PLATE BOLTS, in this work package. Reseal bolts with sealing compound, Item 273, WP 1803 00, after torque check.
3. Install lockring and bifilar cover (WP 0547 00).
4. Check area for cleanness and foreign material.
5. Close main rotor pylon sliding cover.

**9 TO 11 HOURS SPINDLE ATTACHMENT BOLTS**

1. Remove sealing compound from spindle attachment bolt heads.
2. **TORQUE SPINDLE ATTACHMENT BOLTS TO 910 - 1010 INCH-POUNDS IN CRISSCROSS SEQUENCE.**
3. Apply sealing compound, Item 273, WP 1803 00, around boltheads.
4. If torque has not stabilized, repeat torque check, 9 to 11 flight hours until stabilized.
5. If torque has not stabilized after fourth consecutive torque check, remove spindle and inspect attachment bolts, inserts, and breakaway/removal torque (WP 0551 00). Replace parts as required. Repeat torque check every 9 to 11 flight hours until stabilized.

**END OF WORK PACKAGE**

## OUTBOARD RETENTION PLATE NUTS TORQUE CHECK - 9 TO 11 HOURS

### NOTE

- Inboard retention plate bolts torque must be stabilized prior to performing torque check on outboard retention plate nuts.
- Whenever outboard retention plate nuts torque is broken, a torque check on nuts is required after the first 9 to 11 flight hours.

1. Check torque on outboard retention plate nuts in a tightening direction (Figure 1). **TORQUE ON NUTS MUST NOT BE LESS THAN 627 INCH-POUNDS.**
2. **IF TORQUE ON NUTS IS 627 INCH-POUNDS OR GREATER, TORQUE CHECK IS COMPLETE.**
3. If torque on nuts is below 627 inch-pounds, torque nuts as follows:
   a. **TORQUE NUTS IN CRISSCROSS PATTERN TO 627 - 693 INCH-POUNDS.**
   b. Repeat torque check after 9 to 11 flight hours.
   c. If torque is below 627 inch-pounds after 3 consecutive torque checks, replace all bolts and nuts (WP 0587 00). Repeat torque check.

## OUTBOARD RETENTION PLATE NUTS TORQUE CHECK - 9 TO 11 HOURS - Continued

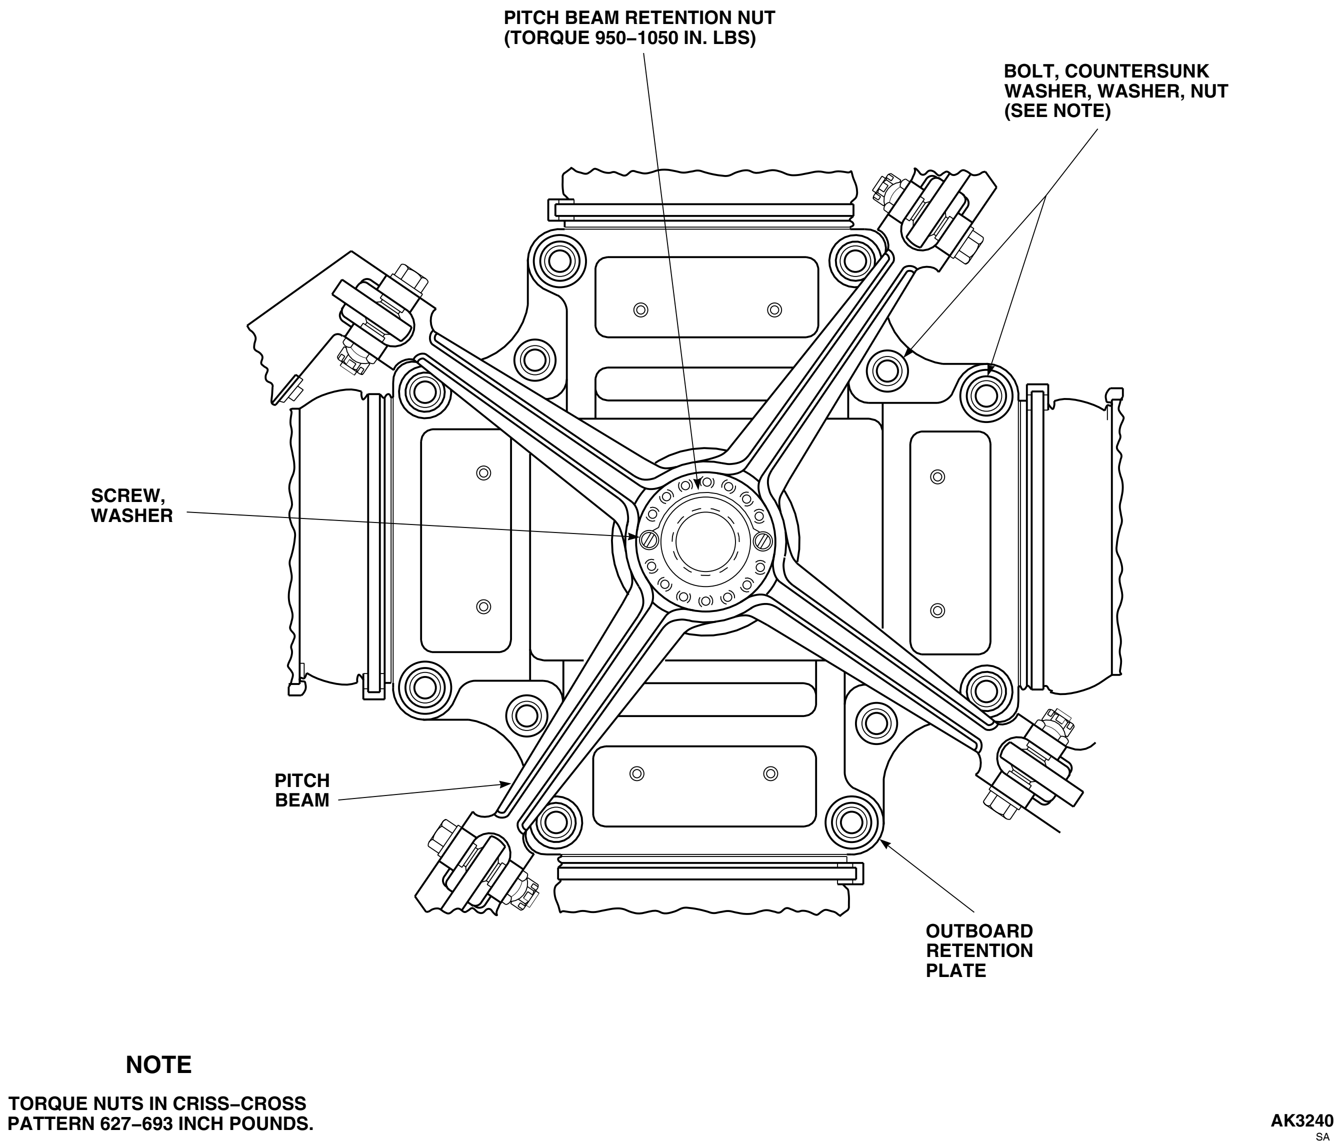

Figure 1. Outboard Retention Plate Nuts and Pitch Beam Retaining Nut Torque Check - 9 to 11 Hours.

## PITCH BEAM RETAINING NUT TORQUE CHECK - 9 TO 11 HOURS

### NOTE

- Inboard retention plate bolts torque must be stabilized prior to performing torque check on tail rotor pitch beam retaining nut.
- Whenever tail rotor pitch beam retaining nut torque is broken, a torque check on nut is required after the first 9 to 11 flight hours.

1. Remove screws and washers from nut (Figure 1).

**PITCH BEAM RETAINING NUT TORQUE CHECK - 9 TO 11 HOURS** - Continued

2. Check torque on pitch beam retaining nut in tightening direction. **TORQUE MUST NOT BE LESS THAN 950 INCH-POUNDS.**
3. **IF TORQUE IS 950 INCH-POUNDS OR GREATER , TORQUE HAS STABILIZED. TORQUE CHECK IS COMPLETE.**
4. **QA** Install screws and washers to nut. **TIGHTEN SCREWS SNUGLY. DO NOT TORQUE.** Using nonelectrical wire, Item 357, WP 1803 00, with electrical insulation sleeving, Item 156, WP 1803 00 to prevent chafing, lockwire screwheads.
5. If torque is below 950 inch-pounds, torque has not stabilized. Torque nut as follows:
   a. **TORQUE NUT TO 950 - 1050 INCH-POUNDS USING SPANNER WRENCH. DO NOT EXCEED 1050 INCH-POUNDS TORQUE LIMIT WHEN ATTEMPTING TO ALIGN HOLES IN NUT AND WASHER.**
   b. If holes in retaining nut do not align with holes in washer when 1050 inch-pounds is reached, do this:
      (1) Remove pitch beam (WP 0587 00). Check pitch beam conical seat and washer mating surface, retaining nut, washer, and pitch control shaft tapered surface for damage or debris which may prevent alignment of holes. Replace components as required.
      (2) Reinstall pitch beam (WP 0587 00). Install washer 180 degrees from original position. Line up pitch beam lands with slot in washer. Turn pitch beam as necessary.
   c. **QA** Install screws and washers to retaining nut. **TIGHTEN SCREWS SNUGLY, DO NOT TORQUE.** Using nonelectrical wire, Item 357, WP 1803 00, with electrical insulation sleeving, Item 156, WP 1803 00 to prevent chafing, lockwire screwheads.
   d. Repeat torque check after 9 to 11 flight hours.
6. If torque does not stabilize after three consecutive torque checks, do this:
   a. Remove pitch beam (WP 0587 00).
   b. Inspect pitch beam conical seat and pitch control shaft tapered surface for excessive corrosion preventive compound buildup.
   c. Inspect pitch beam, retaining nut and washer for damage or debris which might prevent correct installation and torquing of parts (WP 0587 00). Replace parts as required.
   d. Inspect pitch control shaft for damage or debris which might prevent correct installation and torquing of parts (WP 1148 00). Replace pitch control shaft as required.
   e. Clean pitch beam, retaining nut, washer, and pitch control shaft and reinstall pitch beam (WP 0587 00). Repeat torque check after 9 to 11 flight-hours.
7. If torque does not stabilize after 3 more consecutive torque checks, replace pitch beam, retention nut, washer, and pitch control shaft (WP 0587 00 and WP 1148 00). Repeat torque check.
8. After torque has stabilized, do this:

## WARNING

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/face shield. Avoid repeated or prolonged contact. Use only in ventilated areas (or use approved respirator as determined by local safety/industrial hygiene personnel). Keep away from open flames, sparks, not surfaces or other source of ignition.

   a. Clean corrosion preventive compound from retaining nut, washer, and protruding end of shaft outside retaining

**PITCH BEAM RETAINING NUT TORQUE CHECK - 9 TO 11 HOURS** - Continued

nut with a clean machinery wiping towel Item 344, WP 1803 00, dampend with cleaning compound solvent, Item 71, WP 1803 00. Then wipe this area with a clean machinery wiping towel Item 344, WP 1803 00, dampend with technical acetone, Item 5, WP 1803 00.

b. Apply a thin coat of corrosion preventive compound Item 106, WP 1803 00, to pitch beam retaining nut, washer, and protruding end of shaft outside retaining nut. Allow to dry and apply a second thin coat.

WP 0666 00
WP 0667 00
WP 0668 00
WP 0669 00

**9 TO 11 HOURS**

## WARNING

## CSI

Torque stabilization check is a critical characteristic.

## NOTE

- Do a torque stabilization check if tail drive shafts are removed, or if the installation torque is broken.
- Check tail drive shaft torque stabilization after 9 to 11 hours of flight and every 9 to 11 flight hours thereafter until no loss of torque is noted.
- If any flex psck is damaged on tail rotor drive shaft, damaged flex pack must be replaced.

1. Check torque on all self-locking nuts on tail drive shaft couplings. **TORQUE MUST NOT BE LESS THAN 328 INCH-POUNDS. IF TORQUE IS 328 INCH-POUNDS OR GREATER, TORQUE HAS STABILIZED. TORQUE CHECK IS COMPLETE.**
2. **IF TORQUE IS LESS THAN 328 INCH-POUNDS, TORQUE HAS NOT STABILIZED. TORQUE NUT TO 328 - 362 INCH-POUNDS. REPEAT TORQUE CHECK AFTER 9 TO 11 FLIGHT HOURS.**
3. If torque has not stabilized after three consecutive torque checks, do this:
   a. Remove bolt, self-locking nut, and spherical washers.
   b. Replace self-locking nut.
   c. Inspect bolt and spherical washers for damage, corrosion, and fretting. **NONE ALLOWED.** Replace hardware that is damaged, corroded or shows signs of fretting.
4. Install bolt, spherical washers, and self-locking nut (WP 0666 00, WP 0667 00, WP 0668 00, and WP 0669 00). Repeat torque check after 9 to 11 flight hours.

# TAIL GEAR BOX INBOARD RETENTION PLATE TORQUE CHECK - 9 TO 11 HOURS

**This WP supersedes WP 1694 00, dated 17 April 2006.**

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Torque Wrench, 30 - 200 in. lbs.

**Material/Parts**
Wire, Nonelectrical, Item 357, WP 1803 00

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 0585 00
WP 0681 00
WP 0683 00
WP 1803 00

## 9 TO 11 HOURS

### NOTE

Whenever tail gear box (new or used) is replaced, or bolts shown in Figure 1 are untorqued for maintenance such as inboard retention plate or seal replacement, check inboard retention plate retaining nut bolts for loss of torque 9 to 11 flight hours after installation, and every 9 to 11 flight hours thereafter, until no loss of torque is noted.

1. Remove tail rotor (WP 0585 00).

### WARNING

### CSI

Torque stabilization check is a critical characteristic.

2. Using ink marker, mark one of the sixteen bolts securing the inboard retention plate to bevel gear as a reference point and loosen jamnuts on retention plate bolts.
3. Check torque on gear box inboard retention plate bolts in the following sequence: 1, 9, 13, 5, 11, 3, 15, 7, 2, 10, 14, 6, 16, 8, 12, 4.

### NOTE

Check torque in a tightening direction only.

4. Using reference bolt as number one, apply torque in three steps and record bolt number and torque range at first movement as follows:
   a. Check torque on all 16 bolts at 100 inch-pounds using the sequence specified in step 3. Record readings.
   b. Check torque on all 16 bolts at 114 inch-pounds using the sequence specified in step 3. Record readings.
   c. Check torque on all 16 bolts at 120 inch-pounds using the sequence specified in step 3. Record readings.
5. On completion of torque check, do the following:

**9 TO 11 HOURS** - Continued

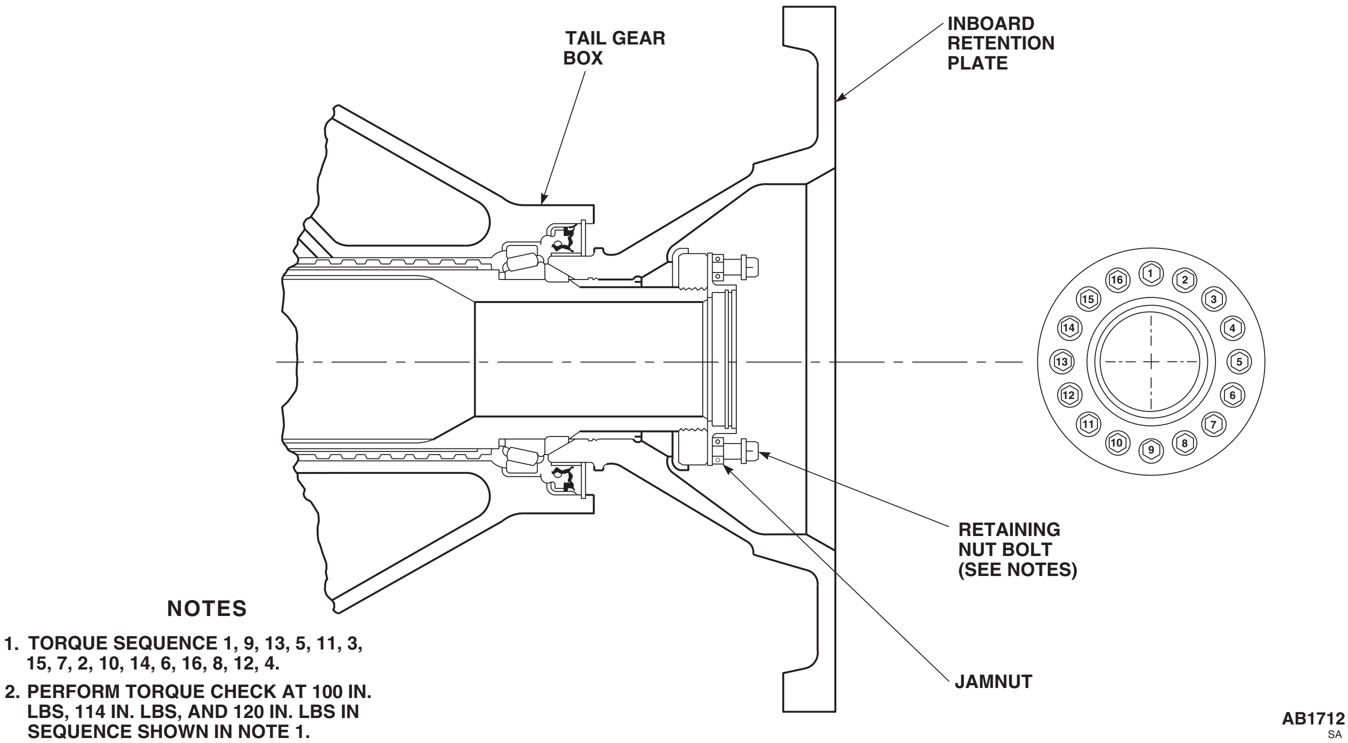

Figure 1. Tail Gear Box Inboard Retention Plate Bolts Torque Check - 9 to 11 Hours.

a. **IF NO BOLTS MOVED BELOW 120 INCH-POUNDS, TORQUE CHECK IS COMPLETE. GO TO STEP 6.**

b. **IF NO BOLTS MOVED BELOW 114 INCH-POUNDS, BUT ONE OR MORE MOVED BETWEEN 114 - 120 INCH-POUNDS, TIGHTEN ALL BOLTS TO 120 INCH-POUNDS USING THE SAME SEQUENCE SPECIFIED IN STEP 3. REPEAT SEQUENCE UNTIL ALL BOLTS HAVE STABILIZED AND NO MOTION IS FELT AT 120 INCH-POUNDS. TORQUE STABILIZATION IS COMPLETE. GO TO STEP 6.**

c. **IF ONE OR MORE BOLTS MOVED BELOW 114 INCH-POUNDS, BUT NO MORE THAN TWO BOLTS MOVED BELOW 100 INCH-POUNDS, TIGHTEN ALL BOLTS TO 120 INCH-POUNDS USING THE SAME SEQUENCE SPECIFIED IN STEP 3. REPEAT SEQUENCE UNTIL ALL BOLTS HAVE STABILIZED AND NO MOTION IS FELT AT 120 INCH-POUNDS. CHECK DA Form 2408-13-1 TO MAKE SURE RETENTION PLATE TORQUE CHECK IS PERFORMED WITHIN THE NEXT 9 - 11 FLIGHT HOURS. GO TO STEP 6.**

d. **IF MORE THAN TWO BOLTS MOVED BELOW 100 INCH-POUNDS, REPLACE SPLIT CONES (WP 0683 00). CHECK DA FORM 2408-13-1 TO MAKE SURE RETENTION PLATE TORQUE CHECK IS PERFORMED WITHIN THE NEXT 9 - 11 FLIGHT HOURS. GO TO STEP 6.**

e. **IF TORQUE DOES NOT STABILIZE AFTER THIRD TORQUE STABILIZATION CHECK, REPLACE SPLIT CONES (WP 0683 00). CHECK DA FORM 2408-13-1 TO MAKE SURE RETENTION PLATE TORQUE CHECK IS PERFORMED WITHIN THE NEXT 9 - 11 FLIGHT HOURS. GO TO STEP 6.**

f. **IF TORQUE DOES NOT STABILIZE AFTER SPLIT CONE REPLACEMENT, REPLACE TAIL GEAR BOX (WP 0681 00). CHECK DA FORM 2408-13-1 TO MAKE SURE RETENTION PLATE TORQUE CHECK IS PERFORMED WITHIN THE NEXT 9 - 11 FLIGHT HOURS. GO TO STEP 6.**

**9 TO 11 HOURS** - Continued

## WARNING

Use of safety cable is not allowed in this application. Use only nonelectrical wire as specified.

6. **QA TIGHTEN JAMNUTS UNTIL A SHARP RISE IN TORQUE IS FELT; THEN TIGHTEN 1/6 TO 1/3 TURN MORE.** Using nonelectrical wire, Item 357, WP 1803 00, lockwire all bolts and jamnuts.

## NOTE

If no tail rotor components were replaced while accomplishing inboard retention plate torque stabilization check, re-assemble tail rotor in accordance with WP 0585 00.

7. Install tail rotor (WP 0585 00).

**END OF WORK PACKAGE**

# UNIT LEVEL

# AIRCRAFT GENERAL

# TAIL ROTOR CABLE TENSION CHECK - 9 TO 11 HOURS

## INITIAL SETUP:

**Tools and Special Tools**

Aircraft Mechanic's Toolkit, 5180-99-B01
Rigging Pin, 70700-20380-062
Tensiometer, 21300

**Personnel Required**

UH-60 Helicopter Repairer MOS 15T (1)

**References**

WP 1039 00
WP 1143 00
WP 1144 00
WP 1145 00
WP 1684 00

## 9 TO 11 HOURS

### CAUTION

Damage to flight control components will result if hydraulic power is shut down during rigging with rigging pins still installed. Make sure all rigging pins are removed before shutting down hydraulic power.

### NOTE

- Tail rotor cable tension must be stabilized on newly delivered aircraft, or on those that have had recent cable replacement. A tail rotor cable tension check must be done every 9 to 11 flight hours, until tension stabilizes (WP 1143 00, WP 1144 00, WP 1145 00, and WP 1143 00, Table 1).
- Check cable tension only after helicopter has been at an even temperature for 1 hour. Do not check tension with helicopter parked in hot sun.

1. If using external hydraulic power, pull BACKUP HYD CONTR circuit breaker in DC ESNTL BUS on overhead control panel. Pressurize backup hydraulic system using external hydraulic power (WP 1684 00).
2. Pressurize backup hydraulic system.
3. Push off SAS 1, SAS 2, and TRIM buttons, on FLIGHT CONTROLS panel in center console. Push BOOST ON.
4. With thermometer, take air temperature reading inside tailcone area close to where tensiometer readings are to be taken.
5. Install rigging pin, 70700-20380-062, in yaw boost servo.
6. Install rigging pin, 70700-20380-062, in collective boost servo.
7. Take cable tensiometer readings on both left and right cables, at least ten inches away from any cable supporting mechanism in front tailcone section (WP 1143 00).
8. Record air temperature readings and cable tension readings on DA Form 2408-13-1.
9. Add left and right cable tension readings from earlier record. Divide total by two.
10. Add new left and right cable tension readings. Divide total by two (see example).
11. Compare temperature at which tension readings were taken. Compensate readings for temperature by doing this:

**9 TO 11 HOURS** - Continued

a. Subtract lower temperature from higher temperature, to get range.

b. Multiply range by 2.25 if temperature is °C (1.25 if temperature is in °F).

c. Add result to average tension recorded with lower temperature. Compare this adjusted tension reading to average tension recorded for higher temperature. **READINGS MUST BE WITHIN 5 POUNDS OF EACH OTHER.**

**EXAMPLE:**

| READING | TEMPERATURE | TENSIOMETER READING (LEFT + RIGHT) |
|---|---|---|
| 1 | 50°f(10°c) | (117 + 121) ÷ 2 = 119 average |
| 2 (9 - 11 flight hours later) | 68°f(20°c) | (143 + 148) ÷ 2 = 145.5 average |

**Table 1. Compensate For Temperature.**

| EXAMPLE |
|---|
| 20°C - 10°C = 10°C |
| or |
| 68°F - 50°F = 18°F |
| 10°C x 2.25 = 22.5 |
| or |
| 18°F x 1.25 = 22.5 |
| 119 + 22.5 = 141.5 |
| (tension compensated for temperature) |

12. Adjust cable tension as necessary to get equal tension readings on left and right cables (WP 1143 00).

13. After cable tension checks and adjustments have been completed, attempt to install rigging pin (1/4 x 6 in) in the tail rotor servo. If pin does not slide in easily, perform a tail rotor rig check (WP 1039 00). If pin will slide in easily, no tail rotor rig check is required.

14. **QA** Remove rigging pin from tail rotor servo.

## NOTE

When earlier and new tension readings, compensated for temperature, are within 5 pounds of each other, consider tail rotor cable tension as stabilized, and no further cable tension checks are required.

15. **QA** Remove rigging pin, 70700-20380-062, from yaw boost servo.

16. **QA** Remove rigging pin, 70700-20380-062, from collective boost servo.

**9 TO 11 HOURS** - Continued

17. Turn off all hydraulic power.
18. Push in BACKUP HYD CONTR circuit breaker in DC ESNTL BUS panel on overhead control.

**END OF WORK PACKAGE**

WP 1696 00

### 10-HOUR MAIN ROTOR BLADE EXPANDABLE PIN INSPECTION.

Check helicopters with main rotor blade expandable pins, ABC6524 or 70103-08107-101 for proper tension using procedure in WP 1696 00. For all other blade pins, the inspection occurs every 40 hours under WP 1696 00. Make sure handle is firmly in place over lower nut when closed. If no resistance is felt on closure, perform main rotor blade pin tension check. If pin becomes unseated when handle is opened or the pin was unseated prior to opening handle, carefully raise main rotor blade to remove binding of expandable blade pin, then reseat pin.

### BIFILAR WEIGHTS

1. Inspect weights for nicks, gouges, and cracks in AREA A, AREA B, and AREA C as follows (Figure 1, Detail A or Detail B):

   a. AREA A - **NICKS AND GOUGES SHALL NOT EXCEED 0.150 -INCH DEEP.**

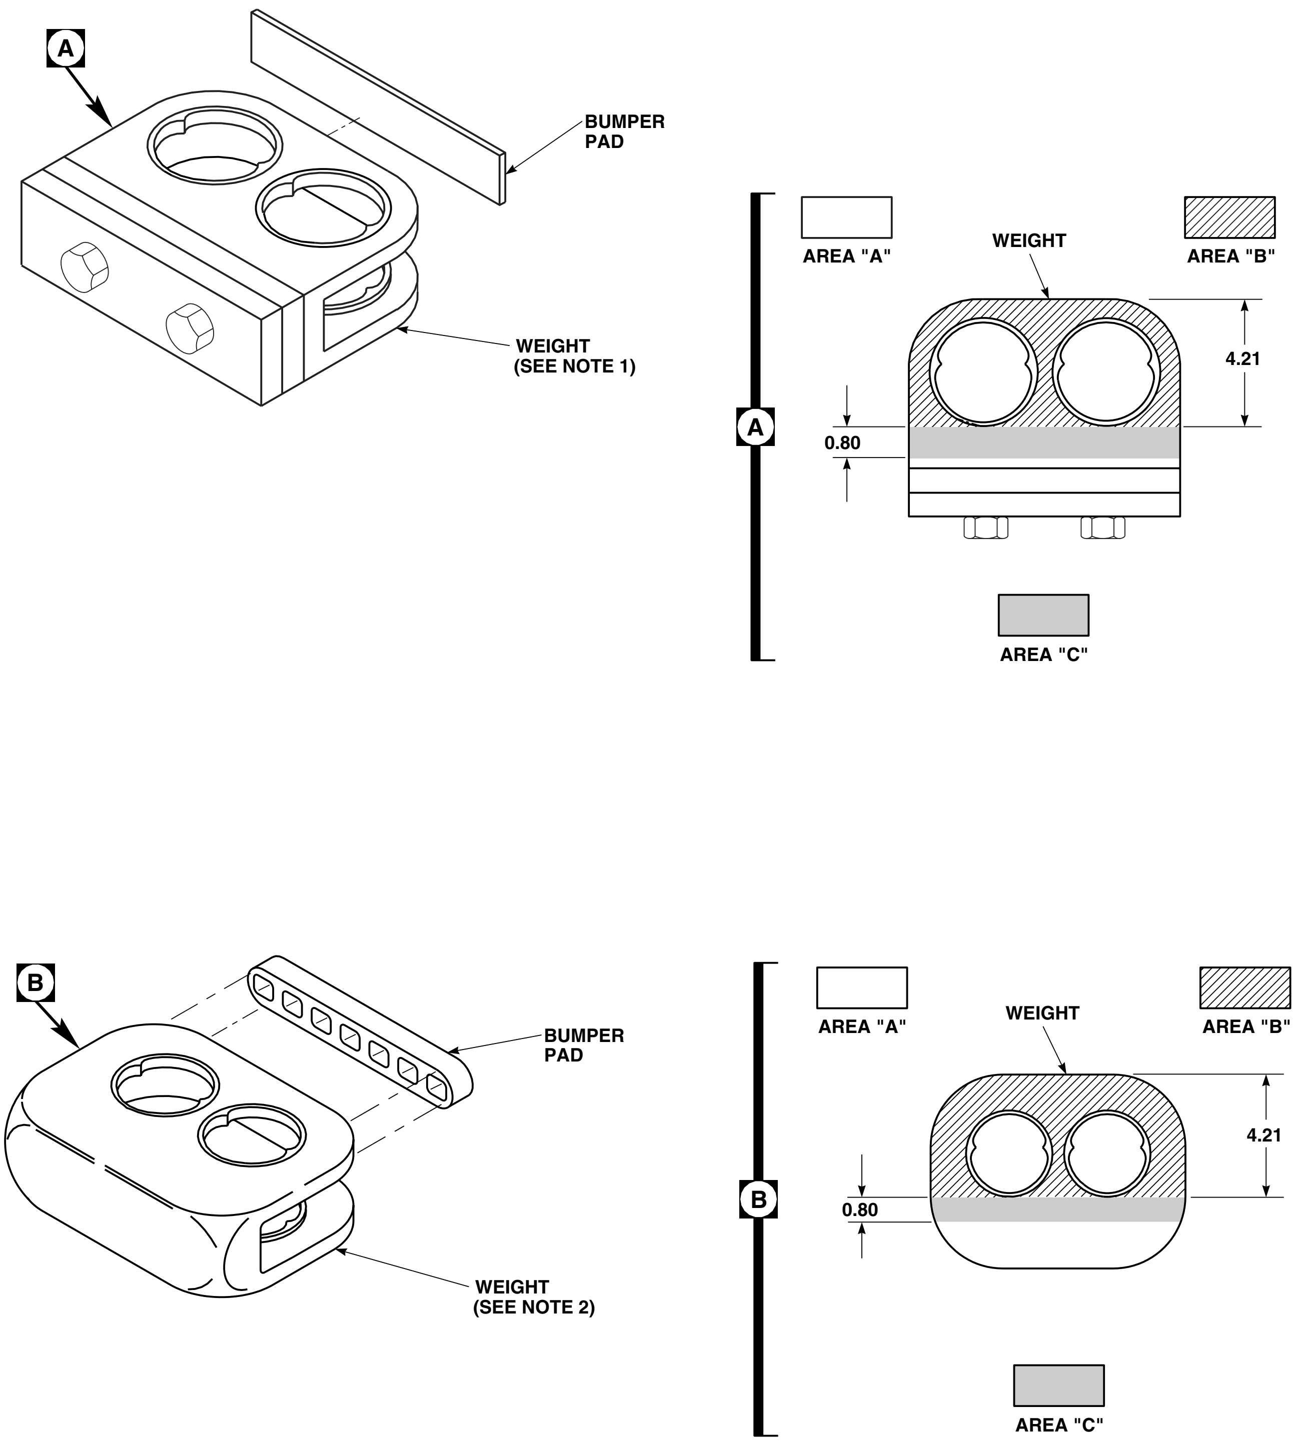
   b. AREA B - **CORNER NICKS AND GOUGES SHALL NOT EXCEED 0.10-INCH DEEP. SURFACE NICKS AND GOUGES SHALL NOT EXCEED 0.030-INCH DEEP. NO CRACKS ALLOWED.**

   c. AREA C - **NO NICKS OR GOUGES ALLOWED.**

   d. Blend nicks and gouges in Area A and Area B to a 1/2-inch radius using abrasive cloth, Item 77, WP 1803 00, or abrasive wheel, Item 350, WP 1803 00.

   e. Replace weight if damage is more than limits.

**BIFILAR WEIGHTS** - Continued



**NOTES**

1. WEIGHT, 70107–08404–042.
2. WEIGHTS, 70107–08404–043 AND 70107–08404–044.
3. ALL DIMENSIONS ARE IN INCHES UNLESS NOTED.

AA1146A
SA

Figure 1. Inspect Bifilar Weights.

**BIFILAR WEIGHTS** - Continued

## NOTE

Cracked paint in area C of weights with ″UT″ marked in area of part number is acceptable.

2. Inspect weight marked ″UT″ in area of part number for cracks in paint in AREA A and AREA B. Inspect weight without ″UT″ marked in area of part number for cracks in paint in AREA A, AREA B, and AREA C. If cracks in paint are found, refer to applicable section of WP 0543 00 00.

### ELASTOMERIC GIMBAL, 70361-08001-101

## NOTE

Do this inspection every 40 flight hours, or before first flight following completion of 40 flight hours.

1. Check eight Allen-head bolts for tightness using finger pressure only.
2. If one to four bolts are loose, inspect for bond separation using 0.005-inch feeler gage (WP 0619 00 00).
3. If more than four bolts are loose, perform torque check on engine output shaft as follows:

## WARNING

## CSI

Verification of minimum torque of bolts is a critical characteristic.

## NOTE

Whenever the engine output shaft assembly is removed or replaced, an engine output shaft vibration level check must be performed (TM 1-6625-724-13&P).

a. Check torque on three bolts or studs connecting flexible coupling to input module flange while holding nuts as follows:

(1) Initially check torque of bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nut. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

(2) **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ALL BOLTS AND ASSEMBLY HARDWARE CONNECTING DISC PACK TO INPUT FLANGE. IF INPUT MODULE FLANGE, 70351-08206-041 WITH NUTPLATES IS USED, REPLACE WITH INPUT MODULE FLANGE, 70351-08206-102, IF AVAILABLE. IF INPUT MODULE FLANGE, 70351-08206-041 IS USED, AFTER TORQUE HAS STABILIZED, PLACE A DROP OF SEALING COMPOUND, Item 281, WP 1803 00, TO THREADS OF BOLTS ADJACENT TO NUTPLATES. MAKE SURE COMPOUND SEEPS INTO NUTPLATES.** Perform engine output shaft vibration check if shaft was disconnected (TM 1-6625-724-13&P).

(3) Check bolts or studs in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nut. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

(4) **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS. REPEAT TORQUE CHECK AFTER EACH 1 TO 3 FLIGHT HOURS UNTIL TORQUE STABILIZES.**

(5) If torque does not stabilize after third consecutive torque check, replace three bolts and assembly hardware connecting disc pack to input module flange. If input module flange, 70351-08206-041 with nutplates is used,

**ELASTOMERIC GIMBAL, 70361-08001-101** - Continued

replace with input module flange, 70351-08206-102, if available. If input module flange, 70351-08206-041 is used, after torque has stabilized, place a drop of sealing compound, Item 285, WP 1803 00, to threads of bolts adjacent to nutplates. Make sure compound seeps into nutplates. Balance engine output shaft (TM 1-6625-724-13&P).

b. Check torque on three nuts securing flexible coupling to engine output shaft by torquing nuts in tightening direction only while holding bolts as follows:

(1) Initially check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

(2) **IF TORQUE ON ANY ONE NUT IS BELOW 90 INCH-POUNDS, REPLACE ENGINE OUTPUT SHAFT.** Perform an engine output shaft balance check if shaft was disconnected (TM 1-6625-724-13&P).

(3) Check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

(4) **IF TORQUE ON ANY NUT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS. REPEAT TORQUE CHECK AFTER EACH 1 TO 3 FLIGHT HOURS UNTIL TORQUE STABILIZES.**

(5) If torque does not stabilize after third consecutive torque check, replace engine output shaft assembly. Balance engine output shaft (TM 1-6625-724-13&P).

c. Visually inspect gimbal for bond separation and bolt breakage (WP 0619 00).

d. Visually inspect for evidence of oil leakage from input module seal (WP 0619 00).

**HORIZONTAL STORES SUPPORT (HSS) PNEUMATIC CHECK VALVE**

**NOTE**

The following procedure is required when operating in dry, dusty and/or sandy environment.

Clean pneumatic check valves (WP 1434 00).

**MAIN ROTOR HEAD DAMPERS**

**NOTE**

Removal of damper assembly is not required for feeler gage inspection.

1. Inspect inboard and outboard main rotor head damper rod end bearings for wear using 0.010-inch side of locally-made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0537 00).

**NOTE**

- Do the following inspections every 15 flight hours only on bearings that have failed the 0.010-inch feeler gage inspection.
- Removal of damper assembly is not required for feeler gage inspection.

2. Inspect inboard and outboard main rotor head damper rod end bearings for wear using 0.015-inch side of locally-made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0537 00).

**MAIN ROTOR PITCH CONTROL ROD SPHERICAL BEARINGS**

1. Inspect main rotor head upper pitch control rod end bearings for wear using 0.010-inch side of locally made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0538 00).

**MAIN ROTOR PITCH CONTROL ROD SPHERICAL BEARINGS** - Continued

2. Inspect main rotor head lower pitch control rod end bearing for wear using 0.010-inch side of locally made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0538 00).
3. Inspect main rotor pitch control rods for any obvious damage or deformation (WP 0538 00).

## NOTE

Do the following inspections every 15 flight hours only on bearings that have failed the 0.010-inch feeler gage inspection.

4. Inspect main rotor head upper pitch control rod end bearings for wear using 0.015-inch side of locally-made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0538 00).
5. Inspect main rotor head lower pitch control rod end bearing for wear using 0.015-inch side of locally made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0538 00).

### MAIN ROTOR PITCH CONTROL ROD ELASTOMERIC BEARINGS

## NOTE

Elastomeric rod end bearing plastic feeler gage should only be used if possible separation exists based on visual inspection of bearing surfaces.

1. Inspect main rotor head upper pitch control rod end bearings for elastomeric cracks or separation, if a concentration or pileup of eraser type wear is present, if an extrusion is detected, if cracking or disbonding of elastomer from shim inner or outer member is suspected. Visually check for signs of inner member separation using hand force, shaking control rod. Check for gaps or cracks in areas other than manufactured shim gaps (WP 0538 00).
2. Inspect main rotor head lower pitch control rod end bearings for elastomeric cracks or separation, if a concentration or pileup of eraser type wear is present, if an extrusion is detected, if cracking or disbonding of elastomer from shim inner or outer member is suspected. Visually check for signs of inner member separation using hand force, shaking control rod. Check for gaps or cracks in areas other than manufactured shim gaps (WP 0538 00).

### MAIN ROTOR SCISSORS

1. Inspect swashplate scissors attachment spherical bearings for play (WP 0539 00).
2. Inspect rotating scissors bearings for play (WP 0540 00).

### SPINDLE ELASTOMERIC BEARINGS

Inspect elastomeric spherical and thrust bearings exterior surfaces through lower hub drain holes using mirror and flashlight (WP 0534 00).

### STABILATOR ACTUATOR CHECK, 70400-06641-108 AND 70400-06641-109

1. Remove cambered fairing (WP 0331 00 ).
2. With trailing edge of stabilator down, place a 50 to 100 pound bag of sand on stabilator.
3. Visually inspect both stabilator actuator housings for cracks in the radius at the bases. Replace stabilator actuator if any cracks are found (WP 0342 00).
4. Remove sand bag and install cambered fairing (WP 0331 00).

## STABILATOR HINGE FITTING TORQUE CHECK

### NOTE

- Whenever a stabilator hinge fitting is replaced, removed and reinstalled, or torque on mounting bolts is broken, the following check is required each 40 flight hours until torque is stabilized for three consecutive 40 hour torque checks .
- Repositioning/slewing the stabilator may be required to gain access to the corner bolts.

1. Remove right/left stabilator pylon fairings as needed to gain access to top and bottom corner bolts.
2. Remove screws and washers securing inspection covers to underside of stabilator. Remove covers.

### CAUTION

**TORQUE MUST NOT BE LESS THAN 180 INCH-POUNDS.**

3. Check torque on top and bottom corner bolts which attach each hinge fitting to front spar of stabilator.
4. **IF TORQUE IS LESS THAN 110 INCH-POUNDS ON ANY BOLT, REPLACE BOLT AND NUT. TORQUE BOLT TO 214 - 236 INCH-POUNDS. REPEAT TORQUE CHECK UNTIL BOLT STABILIZES AT 180 INCH-POUNDS MINIMUM FOR THREE CONSECUTIVE 40 HOUR TORQUE CHECKS.**
5. **IF TORQUE IS 110 - 179 INCH-POUNDS, RETORQUE TOP AND BOTTOM CORNER BOLTS IN A DIAGONAL PATTERN (TOP LEFT CORNER, BOTTOM RIGHT CORNER, TOP RIGHT CORNER, BOTTOM LEFT CORNER) TO 214 - 236 INCH-POUNDS. REPEAT TORQUE CHECK UNTIL BOLT STABILIZES AT 180 INCH-POUNDS MINIMUM FOR THREE CONSECUTIVE 40 HOUR TORQUE CHECKS.**
6. **IF TORQUE IS 110 - 179 INCH-POUNDS FOR THREE CONSECUTIVE 40 HOUR TORQUE CHECKS, REPLACE BOLT AND NUT. TORQUE BOLT TO 214 - 236 INCH-POUNDS. REPEAT TORQUE CHECK UNTIL BOLT STABILIZES AT 180 INCH-POUNDS MINIMUM FOR THREE CONSECUTIVE 40 HOUR TORQUE CHECKS.**
7. **IF TORQUE IS MORE THAN 180 INCH-POUNDS FOR THREE CONSECUTIVE 40 HOUR TORQUE CHECKS, TORQUE HAS STABILIZED. TORQUE CHECK IS COMPLETE.**
8. Install inspection covers to underside of stabilator with washers and screws.
9. Install right and left stabilator/pylon fairings with washers and screws.

## SWASHPLATE LINK ASSEMBLIES

1. Turn off electrical and hydraulic power.

**SWASHPLATE LINK ASSEMBLIES** - Continued

## CAUTION

Any swashplate link assembly which exceeds or does not conform to accept/reject criteria listed in this inspection is to be replaced.

## NOTE

- The following inspection is required on helicopters which have the swashplate link assemblies specified in step 2. If these swashplate links are not installed, this inspection is not required.
- Cracks of spherical bearing will be found on uniball surface usually starting at the outer lip and running parallel to the bolt axis across the bearing.

2. With expandable pin installed, visually inspect spherical bearings of forward longitudinal swashplate link assemblies, 70400-08110-047, 70400-08110-049, and 70400-08110-053; aft longitudinal swashplate link assemblies, 70400-08110-048, 70400-08110-050, and 70400-08110-054; and lateral swashplate link assemblies, 70400-08151-046, 70400-08151-048, and 70400-08151-050 for cracks. **A MAXIMUM OF ONE CRACK IS ALLOWED.** If no cracks are found and expandable pin is properly installed, inspection is complete.
3. If more than one crack is found, replace swashplate link (WP 1018 00).
4. If one crack is found, do this:

   a. Check Teflon liner for deterioration or extrusion between spherical bearing outer race. **NONE ALLOWED.** Replace swashplate link if liner deterioration or extrusion is found.

   b. Check spherical bearing for radial play. **NONE ALLOWED.** Replace swashplate link if radial play is found.

   c. Check gap under expandable pin washer using feeler gage, while pin is installed. **GAP SHALL NOT EXCEED 0.002 - INCH.** If gap exceeds 0.002-inch reinstall expandable pin to obtain correct gap (WP 1018 00).

   d. If expandable pin has passed gap check, perform torque check while pin is installed as follows:

      (1) Remove cotter pin from expandable pin.

      (2) Insert 1/4-inch Allen wrench into end of expandable pin.

      (3) While holding Allen wrench firmly, apply 300 inch pounds of torque to expandable pin nut. **MINIMUM TORQUE OF 300 INCH-POUNDS MUST BE ACHIEVED WITHOUT MOVEMENT OF NUT.** If nut moves before minimum torque is reached, replace swashplate link (WP 1018 00).

      (4) If minimum torque is achieved, remove Allen wrench and install new cotter pin.

   e. If all of the above conditions are met, swashplate link may remain in use for an additional 10 flight hours before replacement is required.

### TAIL ROTOR PITCH CONTROL RODS WITH SPHERICAL BEARINGS

1. Inspect tail rotor pitch control rod end bearings for wear using 0.010-inch side of locally made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0545 00).

## NOTE

Do the following inspections every 15 flight hours only on bearings that have failed the 0.010-inch feeler gage inspection.

2. Inspect tail rotor pitch control rod end bearings for wear using 0.015-inch side of locally made plastic feeler gage, (Figure 209, WP 1805 00) (WP 0545 00).

## TAIL ROTOR PYLON TO TAILCONE BOLTS TORQUE CHECK

### NOTE

Perform this check each time pylon is separated from tailcone.

1. Remove tailcone access covers (WP 0002 00).
2. Check bolts and nuts holding pylon to tailcone. **TORQUE MUST NOT BE LESS THAN 1311 INCH-POUNDS.**
3. **IF TORQUE IS 1311 INCH-POUNDS OR GREATER, TORQUE HAS STABILIZED. TORQUE CHECK IS COMPLETE.** Apply torque stripe to bolts (WP 0381 00).

### WARNING

### CSI

Verification of proper hardware installation and torque of bolts is a critical characteristic.

4. **IF TORQUE IS BELOW 1311 INCH-POUNDS, TORQUE HAS NOT STABILIZED. TORQUE BOLTS TO 1311 - 1449 INCH-POUNDS. REPEAT TORQUE CHECK EVERY 40 FLIGHT HOURS UNTIL TORQUE STABILIZES AT 1311 INCH-POUNDS MINIMUM TORQUE.** Apply torque stripe to bolts after torque stabilizes (WP 0381 00).
5. **IF TORQUE DOES NOT STABILIZE AFTER THREE CONSECUTIVE TORQUE CHECKS, REPLACE BOLT, NUT AND WASHERS. TORQUE BOLTS TO 1311 - 1449 INCH-POUNDS. REPEAT TORQUE CHECK EVERY 40 FLIGHT HOURS UNTIL TORQUE STABILIZES AT 1311 INCH-POUNDS MINIMUM TORQUE.** Apply torque stripe to bolts after torque stabilizes (WP 0381 00 and TM 55-1500-345-23).

## TRANSITION SECTION TO TAILCONE BOLT TORQUE CHECK

### NOTE

Perform this check each time tailcone is separated from transition section.

1. **HH-60A UH-60A** Do this:
   a. Remove troop seats from rear cabin (WP 0233 00).
   b. Remove soundproofing panel from left or right stowage compartment (WP 0258 00).
   c. Unlock cargo netting in stowage compartment.
2. Check torque on bolts and nuts holding tailcone to transition section in tightening direction. **TORQUE MUST NOT BE LESS THAN 190 INCH-POUNDS** (Figure 2, Detail A).
3. **IF TORQUE IS 190 INCH-POUNDS OR GREATER, TORQUE HAS STABILIZED. TORQUE CHECK IS COMPLETE.** Apply torque stripe to nuts (WP 0381 00 and TM 55-1500-345-23).
4. **IF TORQUE IS BELOW 190 INCH-POUNDS, TORQUE HAS NOT STABILIZED. TORQUE NUTS TO 190-210 INCH-POUNDS. REPEAT TORQUE CHECK EVERY 40 FLIGHT HOURS UNTIL TORQUE STABILIZES AT 190 INCH-POUNDS MINIMUM TORQUE.** Apply torque stripe to nuts after torque stabilizes (WP 0381 00 and TM 55-1500-345-23).
5. If torque does not stabilize after three consecutive torque checks, do this:
   a. Remove bolt, washers, and nut.
   b. Install new bolt, countersunk washer, washer, and nut with nut on forward side of stackup. **TORQUE NUT TO 190-210 INCH-POUNDS.** If nut bottoms on bolt shank, one additional washer may be installed under nut.

## TRANSITION SECTION TO TAILCONE BOLT TORQUE CHECK - Continued

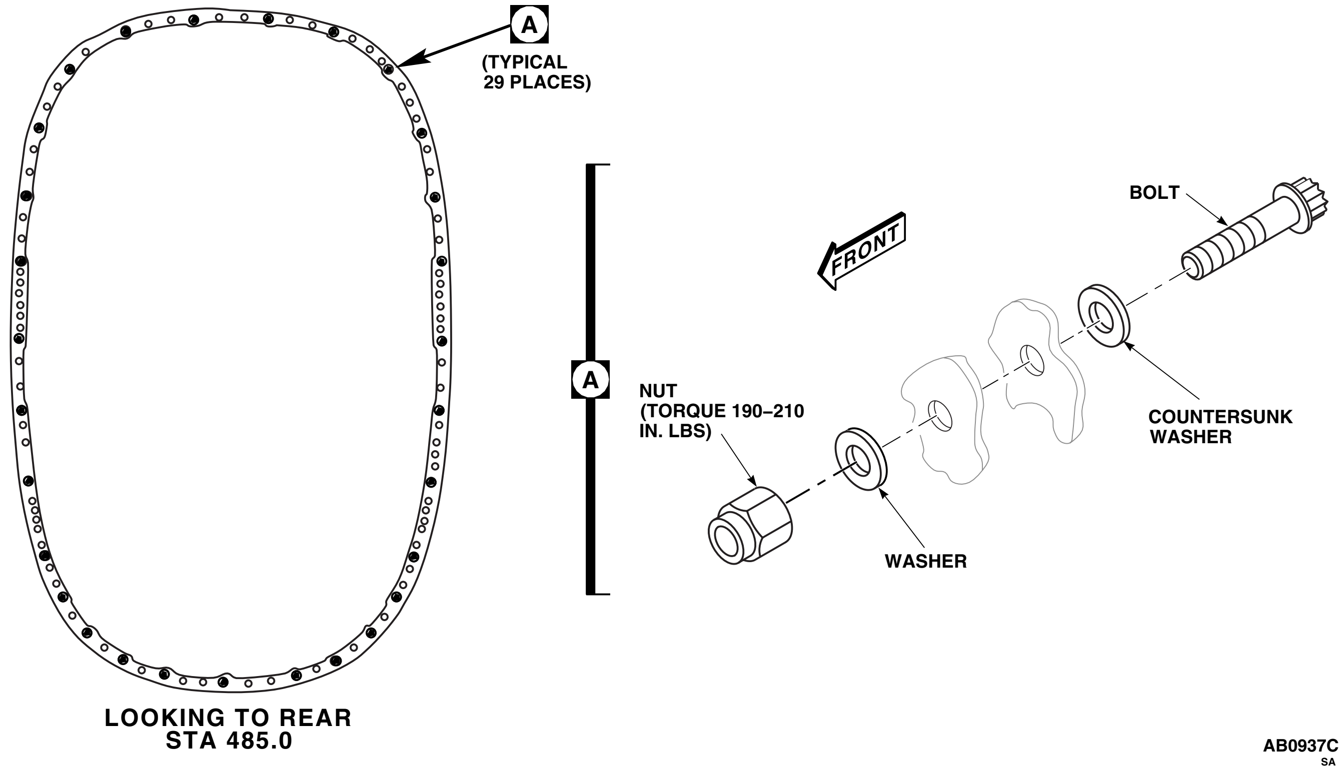


Figure 2. Transition Section to Tailcone Torque Check.

c. Check bolt for proper thread extension beyond nut. **BOLT SHALL EXTEND 0.084-INCH MINIMUM BEYOND NUT.**

d. Repeat torque check every 40 flight hours until stabilized. Apply torque stripe to nuts after torque stabilizes (WP 0381 00 and TM 55-1500-345-23).

e. Make sure DA Form 2408-13-1 is updated to reflect torque check if required.

6. Make sure area is clean and free of foreign objects.

7. **HH-60A UH-60A** Do this:

a. Hook cargo netting in rear section stowage compartment.

b. Install soundproofing panel (WP 0258 00).

c. Install rear troop seats (WP 0233 00 ).

## OIL COOLER ASSEMBLY

Inspect oil cooler viscous damper bearing for debris, damage, or overheating (WP 0626 00).

## MAIN ROTOR BLADE EXPANDABLE PIN TENSION CHECK

### NOTE

There must not be any binding of the expandable pin by the main rotor blade when the tension is checked. The main rotor blades and blade pins do not have to be removed for this inspection.

1. Check main rotor blade expandable pin for security and tension as follows:
   a. Use blade clamp assembly, hoist (or maintenance crane), hoist sling and adapter as necessary, to raise main rotor blade and remove any binding of expandable pins.
   b. Release expandable pin handle from lower nut and open handle.
   c. Pull pin out far enough for top two expandable segments to be visible above blade cuff. Verify that pin is not fractured by observing corresponding movement of lower end of core pin. **DO NOT COMPLETELY REMOVE PIN.**
   d. If pin is not defective, reinstall and check closing tension on handle as follows:
      (1) Using spring scale, place end of spring scale in handle nut hole and pull down in closing direction.
      (2) Keeping spring force perpendicular to long, riveted section of handle, **FORCE REQUIRED TO CLOSE HANDLE MUST BE A MINIMUM OF 25 POUNDS**.

### NOTE

If the force required to close the handle is exceptionally high (difficult to close handle), check for binding of the pin by the main rotor blade. Reducing the nut torque in order to reduce the closing force should not be necessary.

      (3) If force is 25 pounds or above, close and secure handle. **MAKE SURE THAT AT LEAST TWO THREADS EXTEND BEYOND NUT.** Inspection is complete.
      (4) **IF FORCE IS NOT AT LEAST 25 POUNDS, TIGHTEN NUT. ROTATE NUT 1/6 TURN AND RECHECK CLOSING FORCE. REPEAT UNTIL MINIMUM OF 25 POUNDS CLOSING FORCE IS OBTAINED. MAKE SURE THAT AT LEAST TWO THREADS EXTEND BEYOND NUT AFTER PROPER TENSION REQUIREMENTS ARE MET.** If a minimum of two threads are not exposed, clean expandable pin (WP 1634 00). After cleaning, repeat tension check step 1.d.
   e. If inspection criteria is not met, replace pin (WP 0576 00).

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## EVERY 120 HOURS

**This WP supersedes WP 1697 00, dated 15 December 2007.**

**INITIAL SETUP:**

**Tools and Special Tools**

Aircraft Mechanic's Toolkit, 5180-99-B01
Cable Assembly, CBR-TF-6
Eddy Current Inspection Unit, 19EII
Fluorescent Penetration Inspection Kit, XMA101
Gloves
Goggles/Face Shield
Nonmetallic Scraper
Probe Kit, SPCK-107A
Reference Block, Three Notch Titanium (0.008, 0.020, and 0.040 EDM Notches)
Torque Wrench, 30 - 200 in. lbs.
Torque Wrench, 150 - 1000 in. lbs.

**Material/Parts**

Acetone, Technical, Item 5, WP 1803 00
Alcohol, Denatured, Item 48, WP 1803 00
Brush, Electrical Contact, Item 60, WP 1803 00
Cleaning Compound, Solvent, Item 71, WP 1803 00
Cloth, Cleaning, Item 86, WP 1803 00
Remover, Paint, Item 250, WP 1803 00
Sealing Compound, Item 285, WP 1803 00
Swab Pack, Cotton, Item 313, WP 1803 00
Tape, Pressure Sensitive, Adhesive, Item 322, WP 1803 00
Towel, Machinery Wiping, Item 344, WP 1803 00

**Personnel Required**

UH-60 Helicopter Repairer MOS 15T (1)

## ENGINE OUTPUT SHAFT, TRANSMISSION INPUT MODULE FLANGE, ELASTOMERIC GIMBAL, AND ADJACENT COMPONENTS INSPECTION

1. Remove engine air inlet assembly (WP 0484 00).
2. Visually inspect accessible portion of engine output shaft with light and mirror through inspection hole in cowl for obvious damage. **REPLACE ENGINE OUTPUT SHAFT ASSEMBLY IF DAMAGE FOUND EXCEEDS ALLOWABLE LIMITS (WP 0486 00).**
3. Visually inspect engine output shaft for obvious damage. **REPLACE ENGINE OUTPUT SHAFT ASSEMBLY IF DAMAGE FOUND EXCEEDS ALLOWABLE LIMITS (WP 0486 00).**
4. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, visually inspect disc pack coupling for cracks, obvious damage, buckling and lamination spread (WP 0486 00).
5. On helicopters with engine output drive shaft, 70361-08014-041, visually inspect flange/coupling for scratches in paint. **IF PAINT IS SCRATCHED DOWN INTO BASE METAL, REPLACE FLANGE/COUPLING**.

**ENGINE OUTPUT SHAFT, TRANSMISSION INPUT MODULE FLANGE, ELASTOMERIC GIMBAL, AND ADJACENT COMPONENTS INSPECTION** - Continued

## WARNING

## CSI

Verification of minimum torque of bolts is a critical characteristic.

## NOTE

Whenever the engine output shaft is removed or replaced, an engine output shaft vibration level check must be performed (TM 1-6625-724-13&P).

6. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, check torque on three bolts connecting flexible coupling to input module flange while holding nuts as follows:
   a. Initially check bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nut. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**
   b. **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ALL BOLTS AND ASSEMBLY HARDWARE CONNECTING DISC PACK TO INPUT FLANGE (WP 0481 00).** If input module flange, 70351-08206-041, with nutplates is used, replace with input module flange, 70351-08206-102, if available. If input module flange, 70351-08206-041, is used, after torque has stabilized, place a drop of sealing compound, Item 285, WP 1803 00, to threads of bolts adjacent to nutplates. Make sure compound seeps into nutplates. Perform engine output shaft vibration check if shaft was disconnected (TM 1-6625-724-13&P).
   c. Check bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nut. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**
   d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 1 to 3 flight hours until torque stabilizes.
   e. **IF TORQUE DOES NOT STABILIZE AFTER THIRD CONSECUTIVE TORQUE CHECK, REPLACE THREE BOLTS AND ASSEMBLY HARDWARE CONNECTING DISC PACK TO INPUT MODULE FLANGE (WP 0481 00).** If input module flange, 70351-08206-041, with nutplates is used, replace with input module flange, 70351-08206-102, if available. If input module flange, 70351-08206-041, is used, after torque has stabilized, place a drop of sealing compound, Item 285, WP 1803 00, to threads of bolts adjacent to nutplates. Make sure compound seeps into nutplates. Balance engine output shaft (TM 1-6625-724-13&P).
7. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, check torque on three nuts securing flexible coupling to engine output shaft by torquing nuts in tightening direction only while holding bolts.
   a. Initially check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**
   b. **IF TORQUE ON ANY ONE NUT IS BELOW 90 INCH-POUNDS, REPLACE ENGINE OUTPUT SHAFT.** Perform an engine output shaft balance check if shaft was disconnected (TM 1-6625-724-13&P).
   c. Check nuts in tightening direction while holding bolts.**TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**
   d. **IF TORQUE ON ANY NUT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 1 to 3 flight hours until torque stabilizes.
   e. If torque does not stabilize after third consecutive torque check, replace engine output shaft assembly. Balance engine output shaft (WP 0481 00 and TM 1-6625-724-13&P).
8. On helicopters with engine output drive shaft, 70361-08014-041, check torque on six bolts securing flange/coupling to engine output shaft by torquing in tightening direction only.

**ENGINE OUTPUT SHAFT, TRANSMISSION INPUT MODULE FLANGE, ELASTOMERIC GIMBAL, AND ADJACENT COMPONENTS INSPECTION** - Continued

a. Initially check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

b. **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ENGINE OUTPUT SHAFT CONNECTING HARDWARE AND FLANGE/COUPLING (WP 0486 00).** Perform an engine output shaft balance check (TM 1-6625-724-13&P).

c. Check bolts in tightening direction.**TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 3 to 13 flight hours until torque stabilizes.

e. If torque does not stabilize after third consecutive torque check, replace engine output shaft connecting hardware and flange/coupling (WP 0486 00). Balance engine output shaft (TM 1-6625-724-13&P).

9. Visually inspect elastomeric gimbal for bond separation and bolt breakage (WP 0619 00).
10. Visually inspect for evidence of oil leakage from input module seal (WP 0619 00).
11. Do an engine output shaft vibration level check (TM 1-6625-724-13&P).
12. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, check DA Form 2408-13-1 to make sure torque check of bolts connecting disc pack coupling to input module flange is due after initial ground run and after 1 to 3 flight hours, if found loose during the torque check. Also, check DA Form 2408-13-1 to make sure torque check of bolts connecting disc pack coupling to engine output shaft is due after initial ground run and after 1 to 3 flight hours, if found loose during the torque check.
13. On helicopters with engine output drive shaft, 70361-08014-041, check DA Form 2408-13-1 to make sure torque check of bolts connecting flange/coupling to engine output shaft is due after initial ground run and after 3 to 13 flight hours, if found loose during the torque check.
14. Install engine air inlet assembly (WP 0484 00).

**FOLLOWING FIRST EXTERNAL LIFT MISSION EXCEEDING 8000 POUNDS**

**NOTE**

The following inspection is to be performed every 120 hours following first external lift mission exceeding 8000 pounds.

**UH-60A UH-60L 89-26179 - 92-26420** Inspect cargo hook well area between STA 343.0, STA 363.0, and L/RBL 10.0 for cracks. Give special attention to lower caps located on STA 343.0 and STA 363.0, inboard of L/RBL 10.0. **NO CRACKS ALLOWED.**

**INTERMEDIATE GEAR BOX CHIP DETECTOR/TEMPERATURE SENSOR**

**NOTE**

The following inspection is only required on aircraft without a functional built in test system installed.

1. Remove chip detector/temperature sensor and inspect self-closing valve (WP 0622 00).
2. Do an operational check of intermediate gear box chip detector system (WP 0085 00).

### MAIN MODULE SUMP CHIP DETECTOR

## NOTE

The following inspection is only required on aircraft without a functional built in test system installed.

Do an operational check on chip detector in left and right accessory module, left and right input module, and main module (WP 0085 00).

### MAIN TRANSMISSION SUPPORT BEAMS AND UPPER DECK SKIN

1. Remove main transmission drip pan (WP 0259 00, WP 0260 00, or WP 0261 00).
2. If installed, remove overhead lighting panel (TM 1-1520-253-13&P).
3. Inspect left and right main transmission support beams at BL 16.5 for cracks in upper cap, forward and aft of main transmission mounting pad at STA 343.0. Inspect web stiffener attaching STA 343.0 frames to left and right support beams at BL 16.5 for cracks. **NONE ALLOWED**. If cracks are found contact AMSAM-MMC-VS-UA.
4. Inspect upper deck skin for cracks in vicinity of gusset doubler on left and right main transmission support beams. If cracks are present in skin and not in support beam, repair skin (WP 0377 00).
5. Inspect upper deck skin for working fasteners in vicinity of gusset doubler on left and right support beams. If working fasteners are detected, replace working fasteners per TM 1-1500-204-23.
6. Install main transmission drip pan (WP 0259 00, WP 0260 00, or WP 0261 00).
7. If removed, install overhead lighting panel (TM 1-1520-253-13&P).

### OIL COOLER ASSEMBLY

## WARNING

Perform vibration check on oil cooler assembly every time tail rotor drive shaft, forward of STA 470.9, or oil cooler assembly is replaced or disconnected for maintenance.

Perform vibration check on oil cooler assembly (WP 0680 00).

### MAIN ROTOR DAMPER ATTACH BOLTS

Check main rotor damper attach bolt break away torque with torque wrench. Apply 700 inch-pounds of torque in tightening direction to bolt head. **IF BOLT HEAD MOVES, REMOVE AND INSPECT BOLT FOR WEAR AND WASHER FOR DEFORMATION.** Replace bolt and washer if required (WP 0537 00). If bolts are removed, check DA Form 2408-13-1 to make sure damper attachment bolts torque check is shown as due 9 to 11 flight hours after installation.

### PITCH CONTROL RODS

## NOTE

Removal of the cotter pin is not required. Remove the proseal prior to completing the required torque check. Reapply the proseal upon completion of the inspection.

Check pitch control rod upper bolt break away torque with torque wrench. Apply 700 inch-pounds of torque in tightening direction to bolt head. **IF BOLT HEAD MOVES, REMOVE AND INSPECT BOLT FOR WEAR AND WASHER FOR DEFORMATION.** Replace bolt and washer if required (WP 0538 00).

### TAIL GEAR BOX CHIP DETECTOR/TEMPERATURE SENSOR

**NOTE**

The following inspection is only required on aircraft without a functional built in test system installed.

1. Remove chip detector/temperature sensor and inspect self-closing valve (WP 0628 00).
2. Do an operational check of tail gear box chip detector system (WP 0085 00).

### TAIL ROTOR

Perform a balance check of the tail rotor (TM 1-6625-724-13&P).

### PRIMARY SERVO INSPECTION

1. Turn off all electrical and hydraulic power.
2. Open main rotor pylon sliding cover.
3. Rotate main rotor head to position blades to allow best working conditions.
4. Using a clean machinery wiping towel, Item 344, WP 1803 00, thoroughly clean the output end of each servo assembly.
5. With servo's installed on the aircraft and using a flashlight and mirror, visually inspect the bottom side of the rod end. Pay particular attention to the area under the piston nuts and the output lug area. **NO CRACKS ALLOWED.** Replace servo if damage is discovered (WP 1091 00).
6. Close main rotor pylon.

### TAIL ROTOR BLADE HORN ASSEMBLY

1. Clean surfaces of four tail rotor blade horn assemblies with soap and water or denatured alcohol, Item 48, WP 1803 00.
2. Visually examine painted surfaces for cracks with a magnifying glass.
3. If no cracks are found, tail rotor blade assembly may continue in service.
4. If crack is suspected, refer to WP 0585 00.

## EDDY CURRENT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB (PREFERRED METHOD)

### NOTE

- Eddy current is preferred method of inspection. Right hand engine work platform should be closed and secured. Eddy current probes are designed to access inside surface of damper flange through the inspection hole located on the bottom (6 O'clock) position of the main rotor hub. Eddy current instruments are positioned on top of right hand engine work platform and secured by wrapping the shoulder bag around pitch change link and securing the quick release hook to carrying bad D-ring.
- Inside of bolt hole must be free of dirt and debris which may be detrimental to inspection results. All surfaces need to be smooth to provide positive probe contact in inspection area.
- When cleaning, make sure to clean damper bracket attachment hole at the 11 O'clock position when viewed from outside of main rotor hub arm where hole intersects with the inside surface of the hub.

1. If necessary, clean and smooth surface. Clean internal surface of main rotor hub using cleaning cloth, Item 86, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00, or equivalent.

### NOTE

It is not necessary to repaint hub surface upon completion of this procedure.

2. If necessary, remove paint as follows:

   a. Mask of area surrounding the hole approximately 1/4-inch outboard in all directions with pressure sensitive adhesive tape, Item 322, WP 1803 00.

### CAUTION

Do not allow paint remover to come in contact with the elastomeric bearings. Use caution when applying paint remover so that only a small amount is applied to the inspection areas at one time. This will reduce the possibility of accidental spillage. Do not allow paint remover to enter the threads of insert in hole.

   b. Protect area around inspection site against accidental spillage of paint remover. Pack cavity of hub with machinery wiping towels, Item 344, WP 1803 00. Place protective cloth under hub arm to prevent damage to the swashplate or other related airframe surfaces.

   c. Apply paint remover, Item 250, WP 1803 00, using electrical contact brush, Item 60, WP 1803 00, to the surface defined by the tape.

   d. Allow paint remover to remain on the surface until paint bubbles. Use a nonmetallic scraper to remove the paint and primer.

   e. Thoroughly remove all traces of the paint remover using a machinery wiping towel, Item 344, WP 1803 00, saturated with water. Use cotton swab pack, Item 313, WP 1803 00, to clean insert.

**EDDY CURRENT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB (PREFERRED METHOD)** - Continued

3. Make the following initial settings on the eddy current inspection unit:

| CONTROL | SETTING |
|---|---|
| Frequency F1 | 1000 Khz |
| Frequency F2 | Off |
| Hdb | 60.0 |
| Vdb | 70.0 |
| Rot | 60 degrees |
| Probe Dr. | HI |
| LPF | 50 |
| HPF | 0 |
| H Pos | 80% |
| V Pos | 20% |

4. Set up on the test block as follows (TM 1-1520-265-23):

## CAUTION

Due to the high inspection sensitivity required during this inspection, very small coils have been utilized in the probe tips. Rough handling, excessive pressure and tapping the tip will damage the coils. Use extreme care when handling and storing the probes.

## NOTE

- If any part of probe kit is determined to be unserviceable, use Fluorescent Penetrant Inspection (Alternate Method). Refer to, FLUORESCENT PENETRANT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB, in this work package.
- Both probes shall be used to maintain contact with various surfaces around bolt hole. The 10 degree probe is intended for inspecting horizontal surface, while the 45 degree probe is for inspecting vertical surfaces around hole.
- Attempting to inspect horizontal surface with 45 degree probe or vertical surface with 10 degree probe significantly reduces likelihood of identifying any cracks within component.

a. Null the selected probe on the test block.

b. Adjust the phase angle as required to obtain horizontal lift-off.

**EDDY CURRENT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB (PREFERRED METHOD)** - Continued

c. Slide the probe over all three notches in the test block. Adjust the gain to obtain a three block vertical deflection when the probe is passed over the 0.040-inch notch in the test block. Refer to standard instrument display shown in Figure 1-7 of TM 1-1520-265-23.

5. Place the probe on a good area in the inspection location and null instrument.
6. Scan around perimeter of bolt hole as close as possible without achieving edge effect. Scan away from bolt hole perimeter 1/2-inch in all directions.
7. The 2 to 4 and 8 to 10 O'clock positions are high stress zones. Inspect these areas with extreme care. **ANY SIGNAL SIMILAR TO NOTCHES IN TEST BLOCK MAY BE A POSITIVE CRACK INDICATION AND REQUIRES VERIFICATION BY PERFORMING FLUORESCENT PENETRANT INSPECTION (ALTERNATE METHOD) (FLUORESCENT PENETRANT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB (ALTERNATE METHOD)) OF THE 70103-08112-041 MAIN ROTOR HUB.**
8. Record accomplishment of inspection on component historical record, DA Form 2408-16.
9. Make sure area is clean and free of foreign material.

**FLUORESCENT PENETRANT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB (ALTERNATE METHOD)**

1. If necessary, clean and smooth surface. Clean internal surface of main rotor hub using cleaning cloth, Item 86, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00, or equivalent.

## NOTE

It is not necessary to repaint hub surface upon completion of this procedure.

2. If necessary, remove paint as follows:

a. Mask of area surrounding the hole approximately 1/4-inch outboard in all directions with pressure sensitive adhesive tape, Item 322, WP 1803 00.

## CAUTION

Do not allow paint remover to come in contact with the elastomeric bearings. Use caution when applying paint remover so that only a small amount is applied to the inspection areas at one time. This will reduce the possibility of accidental spillage. Do not allow paint remover to enter the threads of insert in hole.

b. Protect area around inspection site against accidental spillage of paint remover. Pack cavity of hub with machinery wiping towels, Item 344, WP 1803 00. Place protective cloth under hub arm to prevent damage to the swashplate or other related airframe surfaces.

## WARNING

It is essential that the following cleaning procedure be performed prior to inspection. Failure to follow these procedures may result in a crack not being detected by the inspection.

c. Apply paint remover, Item 250, WP 1803 00, using electrical contact brush, Item 60, WP 1803 00, to clean inside of hub arm. Clean in area of 11 O'clock damper bracket mounting hole as viewed from outside hub arm in area where 11 O'clock hole intersects inside of hub.

d. If area is painted, allow paint remover to remain on the surface until paint bubbles. Use a nonmetallic scraper to remove the paint and primer.

**FLUORESCENT PENETRANT INSPECTION OF THE 70103-08112-041 MAIN ROTOR HUB (ALTERNATE METHOD)** - Continued

e. Thoroughly remove all traces of the paint remover using a machinery wiping towel, Item 344, WP 1803 00, saturated with water. Use cotton swab pack, Item 313, WP 1803 00, to clean insert.

## WARNING

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/face shield. Avoid repeated or prolonged contact. Use only in ventilated areas (or use approved respirator as determined by local safety/ industrial hygiene personnel). Keep away from open flames, sparks, not surfaces or other source of ignition.

3. Repeat cleaning process using technical acetone, Item 5, WP 1803 00. Clean entire area and thread inserts using cotton swab pack, Item 313, WP 1803 00.

## WARNING

## CSI

Fluorescent penetrant inspection is a critical characteristic.

## NOTE

Wait 15 minutes before proceeding with next step.

4. Fluorescent penetrant inspect hub in area of 11 O'clock damper bracket bolt hole as viewed from outside hub arm in area where 11 O'clock hole intersects inside surface of hub (4 places). Inspect per ASTM-E1417 and TM 1-1520-265-23.

## NOTE

This inspection requires use of Type 1, Method C, Level 4 sensitivity penetrant systems to identify cracks.

5. Clean inspection area around hole with solvent remover.
6. Apply penetrant to inside of hole using a cotton swab pack, Item 313, WP 1803 00, moistened with level 4 penetrant. After applying penetrant, use an inspection mirror and black light to ensure area I sufficiently coated with penetrant.
7. Allow dwell time of 60 minutes.
8. After dwell time has elapsed, wipe excess penetrant from inspection area using cleaning cloth, Item 86, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00. Clean penetrant from hole with cotton swab pack, Item 313, WP 1803 00. Visually check inspection area after each wipe using black light and mirror to ensure background fluorescence has been removed.
9. Apply developer and wait 30 minutes.
10. Using a dark cloth or plastic sheet to exclude as much light from inspection area, inspect internal hub surfaces of 11 O'clock damper attachment bolt hole and surrounding area using black light and inspection mirror for indication of cracking. Pay close attention to edges of elliptical breakout of the hole. **NO CRACKS ALLOWED. IF CRACKS ARE FOUND, REMOVE HUB FROM SERVICE.**
11. Remove residual penetrant material (developer and penetrant) from inspection area by spraying or wiping with solvent remover.
12. Record accomplishment of inspection on component historical record, DA Form 2408-16.
13. Make sure area is clean and free of foreign objects.

## RECURRING ULTRASOUND NDI OF MAIN ROTOR BLADE ATTACHMENT LUGS

NDI all 4 lugs of spindle per TM 1-1520-265-23 (UH-60 Main Rotor Hub Spindle Lug Ultrasound NDI).

## INSPECT STABILATOR

### NOTE

If stabilator is removed and reinstalled on same serial number helicopter and no adjustments or repairs have been made, no test flight is required.

1. Remove stabilator (WP 0338 00).
2. Inspect stabilator attachment bolts (WP 0187 00).

### CAUTION

**TORQUE MUST NOT BE LESS THAN 100 INCH-POUNDS.**

3. Check torque on 1/4-inch center bolts which attach each hinge fitting to front spar of stabilator.
4. **IF TORQUE IS MORE THAN 100 INCH-POUNDS TORQUE CHECK IS COMPLETE. WHEN BOLTS STABILIZE AT 100 INCH-POUNDS MINIMUM FOR THREE CONSECUTIVE 30 HOUR TORQUE CHECKS.**
5. **IF TORQUE IS LESS THAN 65 INCH-POUNDS, REPLACE BOLT AND NUT. TORQUE BOLTS TO 128 - 142 INCH-POUNDS.**
6. **IF TORQUE IS 65 - 99 INCH-POUNDS, RETORQUE CENTER BOLTS IN A DIAGONAL PATTERN (TOP LEFT CENTER, BOTTOM RIGHT CENTER, TOP RIGHT CENTER, BOTTOM LEFT CENTER, THEN TWO MIDDLE BOLTS) TO 128 - 142 INCH-POUNDS.**
7. **IF TORQUE IS 65 - 99 INCH-POUNDS FOR THREE CONSECUTIVE 360 HOUR TORQUE CHECKS, REPLACE BOLT AND NUT. TORQUE BOLTS TO 128 - 142 INCH-POUNDS.**
8. Install stabilator (WP 0338 00).

## APU ENGINE AIR PARTICLE SEPARATOR (EAPS)

Clean air particle separator (WP 1655 00).

## EVERY 360 HOURS OR 5 YEARS SERVICE

Service rescue hoist (WP 1625 00).

## BEFORE FIRST FLIGHT OF DAY

**This WP supersedes WP 1700 00, dated 21 March 2007.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Fluorescent Penetrant Inspection Kit, XMA101
Torque Wrench, 0 - 30 in. lbs.

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-1520-237-23
WP 0338 00
WP 0438 00
WP 1080 00
WP 1085 00

### INSPECT COLLECTIVE AND YAW BOOST SERVOS

1. Open main rotor pylon sliding cover. Neither hydraulic nor electrical power is required.
2. Pull on collective stick with about 10 to 20 lbs force. Release grip but do not push down.
3. Push left pedal with about 20 to 30 lbs force. Release load but do not push right pedal.
4. Inspect both collective and yaw boost servo pistons as follows:
   a. Visually inspect where output clevis attaches. Check for cracks or a break where clevis butts against piston. **NO CRACKS ALLOWED.**
   b. Check for broken piston by grabbing top end of the output link between thumb and forefinger and attempt to move the link vertically. **NO VERTICAL MOVEMENT ALLOWED.**
   c. **REPLACE SERVO HAVING CRACKED OR BROKEN PISTON PER WP 1080 00 FOR YAW BOOST SERVO AND WP 1085 00 FOR COLLECTIVE BOOST SERVO.**
5. Make sure area is clean and free of foreign objects before closing cover.
6. Close main rotor pylon sliding cover.

### INSPECT STABILATOR ASSEMBLY

**NOTE**

Do this inspection on helicopters that have stabilators without inspection covers in lower skin of leading edge.

1. Inspect upper and lower exterior surfaces of stabilator between BL 47.0 and BL 52.0 for cracks and loose rivets. **NONE ALLOWED.**
2. Replace stabilator with cracks or loose rivets and send stabilator to depot for repair (WP 0338 00).

### INSPECT VOLCANO SYSTEM

1. Check DCU and pallet for proper installation and security.
2. Make sure Interface Control panel (ICP) arm switch is in safety.

**INSPECT VOLCANO SYSTEM** - Continued

3. Make sure Pass/Failed/Armed switch on ICP is in OFF (out) position.
4. Remove and secure DCU cover.
5. Make sure DCU power switch and fire circuit switch are off.
6. Make sure safety pins with attached streamer are installed in launcher racks.
7. Check DCU power cables for proper connections.
8. Check launcher rack cables for proper connections.
9. Make sure launcher rack cable break away lanyards are secured in side panel snatch hooks.
10. Check DCU/Helicopter interface cables for proper connections.
11. Check jettison cables for proper connections.
12. If installed, remove launcher rack covers.
13. Check upper and lower expandable pins for proper installation and locking on launcher rack upper mounts.
14. Check side panel upper and lower mounts for security and tightness of rack.
15. Make sure quick release pins are installed in launch rack lower mounts.
16. Check upper load limiting bolts, nuts, and cotter pins for proper installation and security.
17. Check lower side panel expandable pins for security.

## WARNING

## CSI

Verification of cotter pin installation is a critical characteristic.

18. Check side strut attachment for proper installation of cotter pins, lockwire and hardware security.
19. Visually check racks-away sensors for security.
20. Visually check coding connectors on launchers for proper installation and security.

### MAIN LANDING GEAR SKIS - TORQUE CHECK

1. Place spring scale on outside edge of ski tailwheel. Apply pressure outboard until tailwheel swivels. **NO MORE THAN 3 - 5 POUNDS TENSION ALLOWED**.
2. If tension is not as specified, loosen or tighten nut on tailwheel swivel until torque is obtained.
3. Inspect cotter pins and lockwire for proper installation.

### INSPECT MAIN ROTOR HUB 11 O'CLOCK BOLT HOLE

## NOTE

The inspection only applies to 70103-08112-041 and 70103-08112-042. Other part numbered hubs do not require inspection.

Using a magnifying glass, visually inspect the 11 O'clock bolt holes in all four areas where the damper bracket bolts to the main rotor hub (Figure 1). **NO CRACKS PERMISSIBLE.**

## INSPECT MAIN ROTOR HUB 11 O'CLOCK BOLT HOLE - Continued

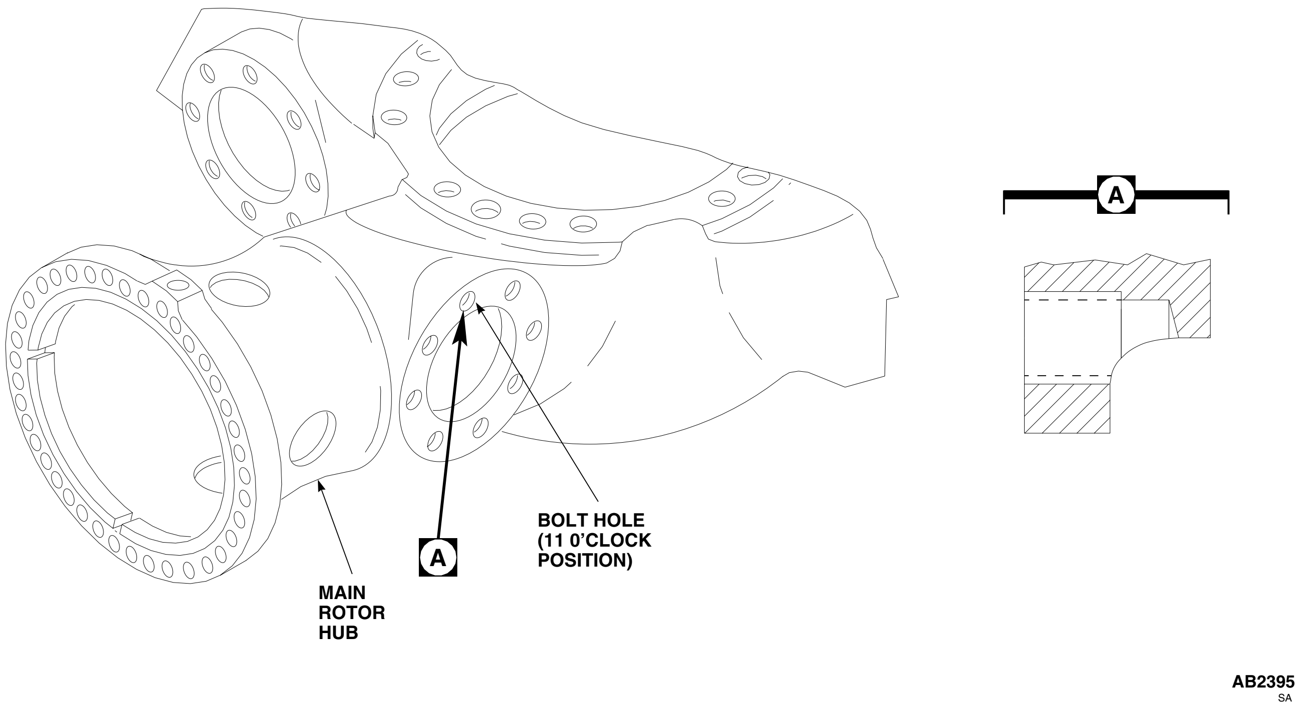

Figure 1. Main Rotor Hub 11 O'Clock Bolt Hole.

## CHECK COCKPIT AIR BAG SYSTEM (CABS) ELECTRONIC CRASH SENSOR UNIT (ECSU)

1. Check CABS ECSU located under the copilot's seat to determine system status.

## INSPECT EACH MAIN LANDING GEAR DRAG BEAM

### NOTE

- Prior to first flight of day, wipe clean the top and bottom of left and right main landing gear drag beams within a 2 inch radius of the drag beam jackpad bolt/tiedown.
- Do not remove the bolt to accomplish this check.

1. Check for evidence of cracks radiating from the jackpad bolt/tiedown holes. **NO CRACKS ALLOWED.**
2. If cracks are suspected, perform a flourescent penetrant inspection (TM 1-1520-265-23).

## END OF WORK PACKAGE

## UNIT LEVEL

## GENERAL

### CAUTION

- Damage to equipment will result if corrosion preventive compound, Item 97, WP 1803 00, and corrosion preventive compound, Item 104, WP 1803 00, used on the tail rotor servo to tail rotor quadrant push rod and flight control rods (forward of primary servo) are mixed. **DO NOT MIX THE CORROSION PREVENTIVE COMPOUNDS.**
- If maintenance requiring removal of the tail rotor servo to tail rotor quadrant push rod and flight control rods (forward of primary servo) from aircraft is performed, the external application of Fluid Film Liquid AR must coincide with the internal application of Fluid Film Liquid A and the external application of corrosion preventive compound, grade 1 must coincide with the internal application of Lubricating Oil. **DO NOT MIX THE CORROSION PREVENTIVE COMPOUNDS.**

### NOTE

- Components listed in 90 Day Corrosion Inspection, in this work package, are to be inspected and have corrosion preventive compounds applied.
- When helicopters are operating in highly corrosive environments (continued exposure to salt water or salt air), the Commander or Maintenance Officer may, at his/her discretion, increase the scope and/or frequency of the application of corrosion preventive compounds to 30 days.

## 90 DAY CORROSION INSPECTION

### NOTE

The following components require inspection and application of corrosion preventive compounds at 90 day intervals.

### Cockpit Exterior

1. Unlatch and open nose door.
2. Inspect nose door and nose avionics compartment as follows:
   a. **HH-60A HH-60L** Inspect FLIR fairing as follows:
      (1) Remove FLIR fairing.
      (2) Check condition of FLIR and fairings.
      (3) Check for dents, cracks, missing hardware, corrosion, and/or damage.
      (4) Install FLIR fairing.
   b. **UH-60A UH-60L EH-60A** Inspect nose door and nose avionics compartment as follows:
      (1) Check for dents, cracks, missing hardware, corrosion, and/or damage.
      (2) Inspect shock mounts for bottoming, corrosion, and/or security.
      (3) Inspect compartment for evidence of water intrusion.
      (4) Inspect around base of vertical gyros for corrosion.

**90 DAY CORROSION INSPECTION** - Continued

3. Inspect nose section avionics compartment electrical connectors (exterior) as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.
   b. Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.
   c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.
4. Close and latch nose door.
5. Inspect cockpit exterior as follows:
   a. Inspect cockpit exterior skin for corrosion, dents, cracks, and/or missing rivets.
   b. Check drain holes under pilots and copilots seats for blockage and/or evidence of corrosion.
   c. Visually inspect nose door latches for corrosion.
   d. Inspect windshield wiper arms for corrosion.
   e. Inspect all antennas for corrosion and/or sealant deterioration.
   f. Inspect wire strike deflectors for damage and/or corrosion.
   g. Inspect cockpit door latches for corrosion.
6. Inspect pilots and copilots step assemblies for cracks, corrosion, and/or missing hardware.

### Cockpit Interior

1. Inspect cockpit interior as follows:
   a. Inspect entire cockpit interior for general cleanliness
   b. Inspect for evidence of oil leakage from ceiling, corrosion, and security of fasteners.
2. Inspect pilots and copilots seats as follows:
   a. Check lap belts for corrosion, cuts, fraying, and security.
   b. Check crotch belt for corrosion, cuts, fraying, and security.
   c. Check shoulder harness for corrosion, cuts, fraying, and security.

### Cabin Exterior

1. Inspect cabin exterior as follows:
   a. Inspect cabin exterior skin for corrosion, dents, cracks, and/or missing rivets.
   b. Check drain holes on cabin tub bottom for blockage and/or evidence of corrosion.
   c. Inspect all antennas for corrosion and/or sealant deterioration.
2. **HH-60A HH-60L** Inspect external rescue hoist as follows:
   a. Inspect hoist support for corrosion, cracks, damage, and security.
   b. Check hoist cowlings and fairings for damage and security, and inspect screw heads for corrosion.
3. Inspect main landing gear drag beam pivot pin as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

**90 DAY CORROSION INSPECTION** - Continued

b. Inspect ID of pivot pin for corrosion. If corrosion is found, remove corrosion (WP 0438 00).

c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 105, WP 1803 00.

4. Inspect main landing gear weight-on-wheels switch for corrosion and security.

5. Inspect main landing gear drag beam jack pad as follows:

a. Inspect jack pad retention nut for presence and alignment of torque stripe.

b. Cover sealant with corrosion preventive compound, Item 103, WP 1803 00 and/or Item 106, WP 1803 00.

6. Inspect ESSS for corrosion as follows:

a. Remove fairings (WP 1428 00).

b. Inspect and treat electrical connectors with corrosion preventive compound, Item 107, WP 1803 00.

c. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

d. Inspect and treat fuel and pneumatic fittings with corrosion preventive compound, Item 107, WP 1803 00.

e. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

### Cabin Interior

1. Inspect seats as follows:

a. Inspect troop/observer seat lap belts and shoulder harness for corrosion, cuts, fraying, and security.

b. Inspect gunner's seat lap belts and shoulder harness for corrosion, cuts, fraying, and security.

c. **EH-60A** Inspect mission operator's seat lap belts and shoulder harness for corrosion, cuts, fraying, and security.

d. **HH-60A HH-60L** Inspect medical attendant's seat lap belts, crotch and shoulder harness for corrosion, cuts, fraying, and security.

2. Inspect cargo hook support structure for damage, corrosion, and/or cracks.

3. Inspect cargo hook emergency release and normal release electrical connectors (exterior) as follows:

a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

b. Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

4. Inspect battery as follows:

a. Remove battery cover (WP 0857 00).

b. **UH-60A UH-60L EH-60A** Check battery vent lines for damage, cleanliness, corrosion, and/or obstructions.

## NOTE

This inspection not required on helicopters with sealed lead acid battery installed.

c. Inspect battery analyzer connector interior and exterior as follows:

**90 DAY CORROSION INSPECTION** - Continued

(1) Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

(2) Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

(3) Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

d. Inspect main battery connector interior as follows:

(1) Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

(2) Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

(3) Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

e. Install battery cover (WP 0857 00).

5. Inspect tail rotor control cables and pullies as follows:

a. Remove soundproofing (WP 0258 00).

b. Inspect tail rotor control cables for wear, fraying, corrosion, and/or loose or missing plastic coating, particularly in the pulley area.

c. Install soundproofing (WP 0258 00).

6. Inspect exterior of electrical connectors over fuel cells as follows:

a. Remove fuel cell enclosure panels.

b. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

c. Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

d. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

e. Install fuel cell enclosure panels.

### Transition/Tailcone Interior

1. Inspect transition and tailcone area for standing water, cracks, and/or corrosion.

2. Inspect electrical connectors (exterior) for corrosion and condition of preventative compound. Treat as necessary

### Transition Area Exterior

1. Inspect transition area exterior as follows:

a. Inspect for corrosion, cracks, dents, and/or missing rivets.

b. Inspect drain holes on transition section bottom area for blockage and/or evidence of corrosion.

c. Inspect all antennas for sealant deterioration and/or bare metal.

2. Inspect HIRSS strut mounts at airframe attachment points for presence and condition of sealant.

**90 DAY CORROSION INSPECTION** - Continued

### Tailcone Exterior

1. Inspect tailcone exterior as follows:
   a. Inspect for corrosion, cracks, dents, and/or missing rivets.
   b. Inspect chaff and flare dispenser payload modules and mounts for condition, security, corrosion, and cleanliness
   c. Inspect all antennas for sealant deterioration and/or bare metal.
   d. Open drive shaft covers.
   e. Inspect driveshafts for chipped paint, cracks, and/or corrosion.
   f. Inspect drive shaft flanges for corrosion between tube and flange which can be identified by flaking paint.
   g. Inspect disc pack couplings for corrosion and condition of corrosion preventative compound. Treat as necessary.
   h. Inspect drive shaft bearing supports for cracks, corrosion, distortion, and security.
   i. Close and secure drive shaft covers.
2. Inspect tail wheel lock actuator, attaching hardware, and bellcrank lock mechanism as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.
   b. Inspect for corrosion. If corrosion is found, replace corroded parts (WP 0464 00).
   c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.
3. Inspect tail wheel lock actuator electrical connectors and all tailcone electrical connector exteriors as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.
   b. Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.
   c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

### Tail Pylon

1. Inspect tail pylon as follows:
   a. Inspect for corrosion, cracks, dents, and/or missing rivets.
   b. Remove intermediate and tail rotor gear box fairings. Open tail pylon drive shaft cover.
   c. Inspect driveshaft for chipped paint, cracks, and/or corrosion.
   d. Inspect drive shaft flange for corrosion between tube and flange which can be identified by flaking paint.
   e. Inspect disc pack coupling for corrosion and condition of corrosion preventative compound. Treat as necessary.
2. Inspect intermediate gear box housing as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.
   b. Inspect gear box housing for corrosion, especially around housing joints, bolts, and studs. If corrosion is found, remove corrosion (WP 0664 00).

**90 DAY CORROSION INSPECTION** - Continued

c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 106, WP 1803 00.

3. Inspect tail rotor servo to tail rotor quadrant push rod as follows:

## NOTE

- Corrosion preventive compound, Item 97, WP 1803 00, and corrosion preventive compound, Item 104, WP 1803 00, are both being used as corrosion preventive compounds on the Tail Rotor Servo To Tail Rotor Quadrant Push Rods. If reapplication or touch up of the corrosion preventive compounds is necessary, use the corrosion preventive compound that was previously used. MIL-C-16173, Grade 1, is a firm black coating and Fluid Film Liquid AR, is an amber, soft gel. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**
- Exposed threads, serrated locking washers, slotted keyways and witness holes are likely places for intrusion of moisture and must be coated.
- If aircraft is being operated in highly corrosive or erosive environment, where increased aircraft washes are required, inspect the corrosion preventive compound integrity of the Tail Rotor Servo To Tail Rotor Quadrant Push Rod after every wash. Allow push rod to dry then apply corrosion preventive compound, Item 97, WP 1803 00, or corrosion preventive compound, Item 104, WP 1803 00, as needed. Use corrosion preventive compound that was previously being used. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**
- If aircraft receives tail rotor maintenance involving hydraulic fluid, inspect the Tail Rotor Servo To Tail Rotor Quadrant Push Rod for integrity of corrosion preventive compound. If integrity of corrosion preventive compound has been violated, wash the push rod and surrounding area thoroughly and allow push rod to dry. Apply corrosion preventive compound, Item 97, WP 1803 00, or corrosion preventive compound, Item 104, WP 1803 00, as needed. Use corrosion preventive compound that was previously being used. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**

a. Inspect for external corrosion and integrity of corrosion preventive compound.

b. If damage is found, repair (WP 1172 00).

## NOTE

Use corrosion preventive compound that was previously being used. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**

c. If required, using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 97, WP 1803 00, or corrosion preventive compound, Item 104, WP 1803 00. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**

4. Inspect tail gear box housing as follows:

a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

b. Inspect gear box housing for corrosion, especially around housing joints, bolts, and studs. If corrosion is found, remove corrosion (WP 0686 00).

c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 106, WP 1803 00.

**90 DAY CORROSION INSPECTION** - Continued

5. Inspect all tail rotor pylon section electrical connector (exterior) as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.
   b. Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.
   c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.
6. Inspect tail rotor pitch beam retaining nut, washer, and exposed end of shaft for corrosion. Treat as necessary with corrosion preventive compound, Item 106, WP 1803 00.
7. Install intermediate and tail rotor gearbox fairings. Close and secure tail pylon drive shaft cover.

### Main Rotor Pylon

1. Inspect flight control rods (forward of primary servo) as follows:

**NOTE**

- Corrosion preventive compound, Item 97, WP 1803 00, and corrosion preventive compound, Item 104, WP 1803 00, are both being used as corrosion preventive compounds on the flight control rods (forward of primary servo). If reapplication or touch up of the corrosion preventive compounds is necessary, use the corrosion preventive compound that was previously used. MIL-C-16173, Grade 1, is a firm black coating and Fluid Film Liquid AR, is an amber, soft gel. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**
- Exposed threads, serrated locking washers, slotted keyways and witness holes are likely places for intrusion of moisture and must be sealed.
- If aircraft is being operated in highly corrosive or erosive environment, where increased aircraft washes are required, inspect the corrosion preventive compound integrity of flight control rods (forward of primary servo) after every wash. Allow control rods to dry then apply corrosion preventive compound, Item 97, WP 1803 00, or corrosion preventive compound, Item 104, WP 1803 00, as needed. Use corrosion preventive compound that was previously being used. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**
- If aircraft receives forward upper deck maintenance involving hydraulic fluid, inspect flight control rods for integrity of corrosion preventive compound. If integrity of corrosion preventive compound has been violated, wash control rods and surrounding area thoroughly and allow control rods to dry. Apply corrosion preventive compound, Item 97, WP 1803 00, or corrosion preventive compound, Item 104, WP 1803 00, as needed. Use corrosion preventive compound that was previously being used. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**

   a. Visually inspect all flight control rod assemblies for external corrosion and integrity of corrosion preventive compound.
   b. If damage is found, repair (WP 1172 00).

**90 DAY CORROSION INSPECTION** - Continued

## NOTE

Use corrosion preventive compound that was previously being used. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**

c. If required, using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 97, WP 1803 00, or corrosion preventive compound, Item 106, WP 1803 00. **DO NOT MIX CORROSION PREVENTIVE COMPOUNDS.**

2. Inspect upper deck flight control rods, bellcranks, walking beam, and tie rods (aft of primary servo) as follows:

   a. Visually inspect all flight control rod assemblies for external corrosion.

   b. Inspect for scratched and worn paint.

   c. If damage is found, repair (WP 1018 00 and WP 1172 00).

3. Inspect main transmission as follows:

   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

   b. Inspect main transmission housing for corrosion, especially around housing joints, bolts, and studs. If corrosion is found, remove corrosion (WP 0639 00).

   c. Reapply corrosion preventive compound , Item 106, WP 1803 00.

4. Inspect main rotor pylon fairing stringer (above skin at STA 460.0 TO STA 480.0) as follows:

## NOTE

The stringer or external strap is located on the outside of the fuselage skin under the main rotor pylon fairing fuselage attachment flange.

   a. Remove APU panel for access to the stringer/strap area (WP 0307 00).

   b. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

   c. Inspect for corrosion to the left hand and right hand stringer/strap and skin behind the fairing attachment in the area of STA 460.0 TO STA 480.0. **PITS SHALL NOT EXCEED 0.015-INCH DEEP.** If corrosion is found but does not exceed limits, refer to Corrosion Removal Procedure No. 6. Refer to, CORROSION REMOVAL PROCEDURE NO. 6, in this work package.

   d. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 104, WP 1803 00.

   e. Install APU panel (WP 0307 00).

5. Inspect all main rotor pylon section electrical connectors (exterior) as follows:

   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.

   b. Inspect for corrosion. If corrosion is found, refer to Corrosion Removal Procedure No. 3. Refer to, CORROSION REMOVAL PROCEDURE NO. 3, in this work package.

   c. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

### Main Rotor System

1. Inspect main rotor head for chipped paint, corrosion, and/or presence/condition of sealant.

**90 DAY CORROSION INSPECTION** - Continued

2. Visually inspect entire main rotor system including main rotor blades, main rotor blade retention pins, bolts, nuts, and washers for corrosion.
3. Check pitch control rod hardware and jamnut areas for presence/condition of sealant.
4. Inspect swashplate and scissors assembly for cracks, dents, distortion, corrosion, and security.
5. Inspect main rotor blade exposed balance washers, nuts, and bolts as follows:
   a. Remove corrosion preventive compound. Refer to, CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL, in this work package.
   b. Inspect for corrosion. **PITS IN WASHERS SHALL NOT EXCEED 0.020-INCH DEEP. PITS NOT ALLOWED IN BOLTS AND NUTS.**If corrosion is found on washers and does not exceed limit, do this:
      (1) Remove surface corrosion using abrasive mat, Item 2, WP 1803 00, or corrosion removing compound, Item 108, WP 1803 00, with acid swabbing brush, Item 57, WP 1803 00. Rinse with water and dry with machinery wiping towel, Item 344, WP 1803 00.
      (2) Apply epoxy primer coating kit, Item 120, WP 1803 00.

### Aft Main Rotor Pylon

1. Inspect drive shaft flanges for corrosion between tube and flange identified by flaking paint.
2. Inspect drive shafts for chipped paint, cracks, and/or corrosion.
3. Inspect axial fan and compartment for chipped paint and/or corrosion.
4. Inspect ALQ-144 power cable and connector for condition and presence of corrosion preventive compound. Treat as necessary.
5. Inspect ALQ-144 shock mounts and bonding straps for cracks and/or corrosion.
6. Inspect APU and compartment for corrosion.

### Engines

1. Inspect entire engine and engine compartment for corrosion and/or standing water.
2. Inspect cowling latches and hinge pins for corrosion.

## CORROSION PREVENTIVE COMPOUND BUILDUP REMOVAL

**NOTE**

Continued application of corrosion preventive compound may cause excessive buildup.

1. Remove corrosion preventive compound using machinery wiping towel, Item 344, WP 1803 00, dampened with technical isopropyl alcohol, Item 170, WP 1803 00.
2. Wipe dry with clean machinery wiping towel, Item 344, WP 1803 00.

## CORROSION REMOVAL PROCEDURE

### Corrosion Removal Procedure No. 1

1. Remove surface corrosion using abrasive mat, Item 2, WP 1803 00. Remove as much corrosion as possible without removing part. Do not remove any more material than is necessary to remove corrosion. Do not remove sealant to permit cleanup.
2. Clean repaired area using technical isopropyl alcohol, Item 170, WP 1803 00, and acid swabbing brush, Item 57, WP 1803 00. Dry using clean machinery wiping towel, Item 344, WP 1803 00.

**CORROSION REMOVAL PROCEDURE** - Continued

3. Inspect repaired area. **PART MAY REMAIN IN SERVICE PROVIDING THAT ALL VISIBLE CORROSION IS REMOVED.**

## CAUTION

Damage to equipment will result if corrosion preventive compound contacts Teflon lined spherical bearings. Teflon linings will degrade. Use care when applying corrosion preventive compound.

## NOTE

Do not spray corrosion preventive compound on components with Teflon lined spherical bearings. Use brush only.

4. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

### Corrosion Removal Procedure No. 2

1. Remove surface corrosion using abrasive mat, Item 2, WP 1803 00. Remove as much corrosion as possible without removing part. Do not remove any more material than is necessary to remove corrosion. Do not remove sealant to permit cleanup.
2. Clean repaired area using technical isopropyl alcohol, Item 170, WP 1803 00, and acid swabbing brush, Item 57, WP 1803 00. Dry using clean machinery wiping towel, Item 344, WP 1803 00.
3. Inspect repaired area. **PART MAY REMAIN IN SERVICE PROVIDING THAT ALL VISIBLE CORROSION IS REMOVED.**
4. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

### Corrosion Removal Procedure No. 3

1. Disconnect electrical connector.
2. Remove surface corrosion from electrical connector (TM 1-1500-343-23).
3. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.
4. Connect electrical connector.

### Corrosion Removal Procedure No. 4

1. Remove surface corrosion using abrasive mat, Item 2, WP 1803 00. Remove as much corrosion as possible without removing part. Do not remove any more material than is necessary to remove corrosion.
2. Clean repaired area using technical isopropyl alcohol, Item 170, WP 1803 00, and acid swabbing brush, Item 57, WP 1803 00. Dry using clean machinery wiping towel, Item 344, WP 1803 00.

## CAUTION

Damage to equipment will result if corrosion preventive compound contacts Teflon lined spherical bearings. Teflon linings will degrade. Use care when applying corrosion preventive compound.

## NOTE

Do not spray corrosion preventive compound on components with Teflon lined spherical bearings. Use brush only.

3. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 107, WP 1803 00.

**CORROSION REMOVAL PROCEDURE** - Continued

### Corrosion Removal Procedure No. 5

1. Remove surface corrosion using abrasive mat, Item 2, WP 1803 00. Remove as much corrosion as possible without removing part. Do not remove any more material than is necessary to remove corrosion. Do not remove sealant to permit cleanup.
2. Clean repaired area using technical isopropyl alcohol, Item 170, WP 1803 00, and acid swabbing brush, Item 57, WP 1803 00. Dry using clean machinery wiping towel, Item 344, WP 1803 00.
3. Inspect repaired area. **PART MAY REMAIN IN SERVICE PROVIDING THAT ALL VISIBLE CORROSION IS REMOVED.**
4. Apply corrosion removing compound, Item 108, WP 1803 00, with acid swabbing brush, Item 57, WP 1803 00, to repaired area. Rinse with water. Dry with machinery wiping towel, Item 344, WP 1803 00.
5. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 105, WP 1803 00.

### Corrosion Removal Procedure No. 6

1. Remove surface corrosion using procedures for aluminum per TM 1-1500-344-23. Do not remove any more material than is necessary to remove corrosion.
2. Inspect repaired area. **PITS SHALL NOT EXCEED 0.015-INCH DEEP.**
3. Treat repaired aluminum surfaces per TM 1-1500-344-23.
4. Touch up repaired area with epoxy primercoating kit, Item 120, WP 1803 00.
5. Using acid swabbing brush, Item 57, WP 1803 00, apply corrosion preventive compound, Item 105, WP 1803 00.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## EVERY 120 DAYS

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 1644 00
WP 1645 00
WP 1712 00

### INSPECT EJECTOR RACKS, MAU-40/A AND BRU-22A/A

1. Clean BRU-22A/A ejector rack and firing lead cable (WP 1645 00).
2. Clean MAU-40/A ejector rack (WP 1644 00).
3. Inspect MAU-40/A ejector rack per WP 1712 00.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## EVERY 6 MONTHS

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-1500-204-23
WP 0414 00
WP 0541 00

### MAIN ROTOR BLADE

Every 6 months, check main rotor blade spar pressure (WP 0541 00).

### GROUND RECEPTACLE

(WP 0414 00 and TM 1-1500-204-23).

### PORTABLE FIRE EXTINGUISHERS

Inspect portable fire extinguishers located in the cockpit and cabin (TM 1-1500-204-23).

### END OF WORK PACKAGE

## UNIT LEVEL

## AIRCRAFT GENERAL

## EVERY 12 MONTHS

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Torque Wrench, 30 - 200 in. lbs.

**Material/Parts**
Antiseize Compound, Item 49, WP 1803 00

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-1500-204-23
WP 0087 00
WP 1803 00

### COMPASS INDICATORS

Check gyromagnetic and magnetic standby compass indicator for correct reading on all cardinal headings (TM 1-1500-204-23).

### PITOT STATIC SYSTEM INSPECTION

**NOTE**

If aircraft is operated in inclement weather, drain ports should be checked more frequently.

1. From under cockpit, remove caps from pitot and static drain ports underneath pilot's and copilot's seats.
2. Drain water from lines. Check drain holes for blockage.
3. Coat caps with antiseize compound, Item 49, WP 1803 00.
4. Install caps. **TORQUE TO 40 - 60 INCH-POUNDS.**
5. Perform an inspection and operational check of the pitot-static system to include the altimeter, vertical velocity indicator, and the airspeed indicator as applicable (WP 0087 00).

### FREE-AIR THERMOMETER (FAT) INSPECTION

**NOTE**

Inspect and test Free-Air Thermometer any time the FAT gage is replaced.

Inspect and test free-air thermometer (FAT) (TM 1-1500-204-23).

**END OF WORK PACKAGE**

## CABIN TUB INSPECTION

### NOTE

Removal of floor panel assemblies is to be performed at 48 months since last performed. Under no circumstances will the duration exceed 48 months since last performed.

1. Remove cabin floor panel assemblies (WP 0262 00).
2. Inspect tub section for corrosion, loose or missing fasteners, damage to stringers, and general condition. Inspect floor panel assemblies for damage and security of fasteners. Repair or replace missing or damaged fasteners (WP 0402 00). Pay particular attention to tub's right/rear and left/rear corners as these areas are prone to collect dirt, debris and moisture. Make sure drain holes are not clogged or blocked. Treat corroded areas as necessary.
3. Install cabin floor panel assemblies (WP 0262 00).

## FLIGHT CONTROL RODS

### NOTE

- Remove and inspect flight control rod assemblies at 48 month interval. Inspection interval may be made to coincide with the closest 720 hour inspection as long as 48 month interval is not exceeded.
- Refer to WP 1036 00 for control rod disassembly and repair.
- Do not disassemble any riveted connections when inspecting control rods. Inspect only the internal surfaces of the adapter tube that are accessible and exposed after disassembly of threaded components. **DO NOT REMOVE** plug or any cast resin from adapter to facilitate inspection.

1. Remove and completely disassemble the following flight control rods:
   a. Torque shaft to boost servo control rods (4 ea.).
   b. Boost servo to mixer control rods (3 ea.).
   c. Mixer to primary servo control rods (3 ea.).
   d. Yaw lever to forward quadrant control rod (1 ea.).
   e. Tail rotor servo to tail rotor quadrant pushrod (1 ea.).
2. Visually inspect all external surfaces of disassembled control rod components for corrosion. Repair as required (WP 1172 00).
3. Visually inspect internal areas of control rod for corrosion using engine borescope. Repair as required (WP 1172 00).

## FUEL CELL CORROSION INSPECTION

### NOTE

- To perform this inspection, either obtain FUEL CELL CORROSION INSPECTION KIT or request assistance from supporting ASB/AVIM or AVCRAD.
- Inspect video scope per setup procedures within TM 1-4920-475-13&P prior to use.

1. Set up video scope per TM 1–4920–475–13&P, on left side of aircraft.
2. Attach grounding clamps of grounding strap to handle on video scope and to aircraft ground.
3. Insert Corrosion Preventive Compound (CPC) Tube Kit through working channel in video scope until tube is just about to exit tip of probe. **DO NOT PUSH CPC TUBE OUT OF PROBE TIP UNLESS TREATING CORROSION OF MOLD.** CPC tube will obscure view if extended past probe tip.

### WARNING

Corrosion preventive compound, Item 105, WP 1803 00, is flammable and toxic. Good general ventilation is normally adequate. Skin and eye protection is required. Avoid all sources of ignition.

4. Attach CPC tube kit nozzle to CPC can, Item 105, WP 1803 00.
5. If present, remove body plug in upper step boxes on left and right side of aircraft. **DO NOT DISCARD BODY PLUGS.**

**FUEL CELL CORROSION INSPECTION** - Continued

## WARNING

Corrosion preventive compound, Item 105, WP 1803 00, is flammable and toxic. Good general ventilation is normally adequate. Skin and eye protection is required. Avoid all sources of ignition.

## NOTE

- If corrosion or mold is found, the corrosion/mold should be recorded. Photograph area and document location. Re-inspect at next PMI. The Maintenance Officer (MO) may inspect more frequently at his discretion. The fuel cells should be removed during the next 48 month inspection and the compartment repaired.
- If evidence of deteriorating foam blocks in fuel cell cavities exists, then it should be recorded and re-inspected at every PMI. The MO may inspect more frequently at his discretion. The fuel cells should be removed during the next 48 month inspection and the foam replaced.
- If display on monitor is blurred after spraying CPC onto corrosion/mold, remove video scope from aircraft, turn off lamp and clean probe tip per TM 1-4920-475-13&P.
- The 48 month fuel cell removal requirement may be waived if the fuel cell compartment video scope inspection shows no indication of cracks, corrosion, or mold.

6. Inspect fuel cell compartment as follows:
   a. If corrosion or mold covers less than 10 percent of compartment, push CPC tube out of probe tip approximately 1 inch and spray CPC on corroded area or mold using CPC tube kit. Record location of corrosion and re-inspect at every PMI. The Maintenance Officer (MO) may inspect more frequently at his discretion.
   b. If corrosion damage exceeds the limits detailed in WP 0377 00 or the surface corrosion covers over 10 percent of fuel compartment surface area, fuel cells must be removed and airframe repaired within 30 days.
   c. If crack indications are found on inspected components, fuel cells must be removed and airframe repaired within 30 days.
   d. Inspect stringers, gussets and vertical surfaces of skin for corrosion, mold and deteriorating foam blocks (Figure 1 and Figure 2).
   e. Remove fuel cells and make repairs in fuel cell in accordance with TM 1-1500-204-23 and TM 1-1500-344-23 of any of the following criteria are met:
      (1) Evidence of deteriorating foam blocks in fuel cell cavities. Deteriorating foam can clog drain holes and lead to corrosion.
      (2) Corrosion or mold covers more than 10 percent of compartment being inspected.

## NOTE

Shaded areas in Figure 1 have no access.

7. Inspect left hand underside fuel cell as follows (Figure 1):
   a. Inspect compartment L107 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 30.5L.
   b. Inspect compartment L108 and L208 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 24.25L.

**FUEL CELL CORROSION INSPECTION** - Continued

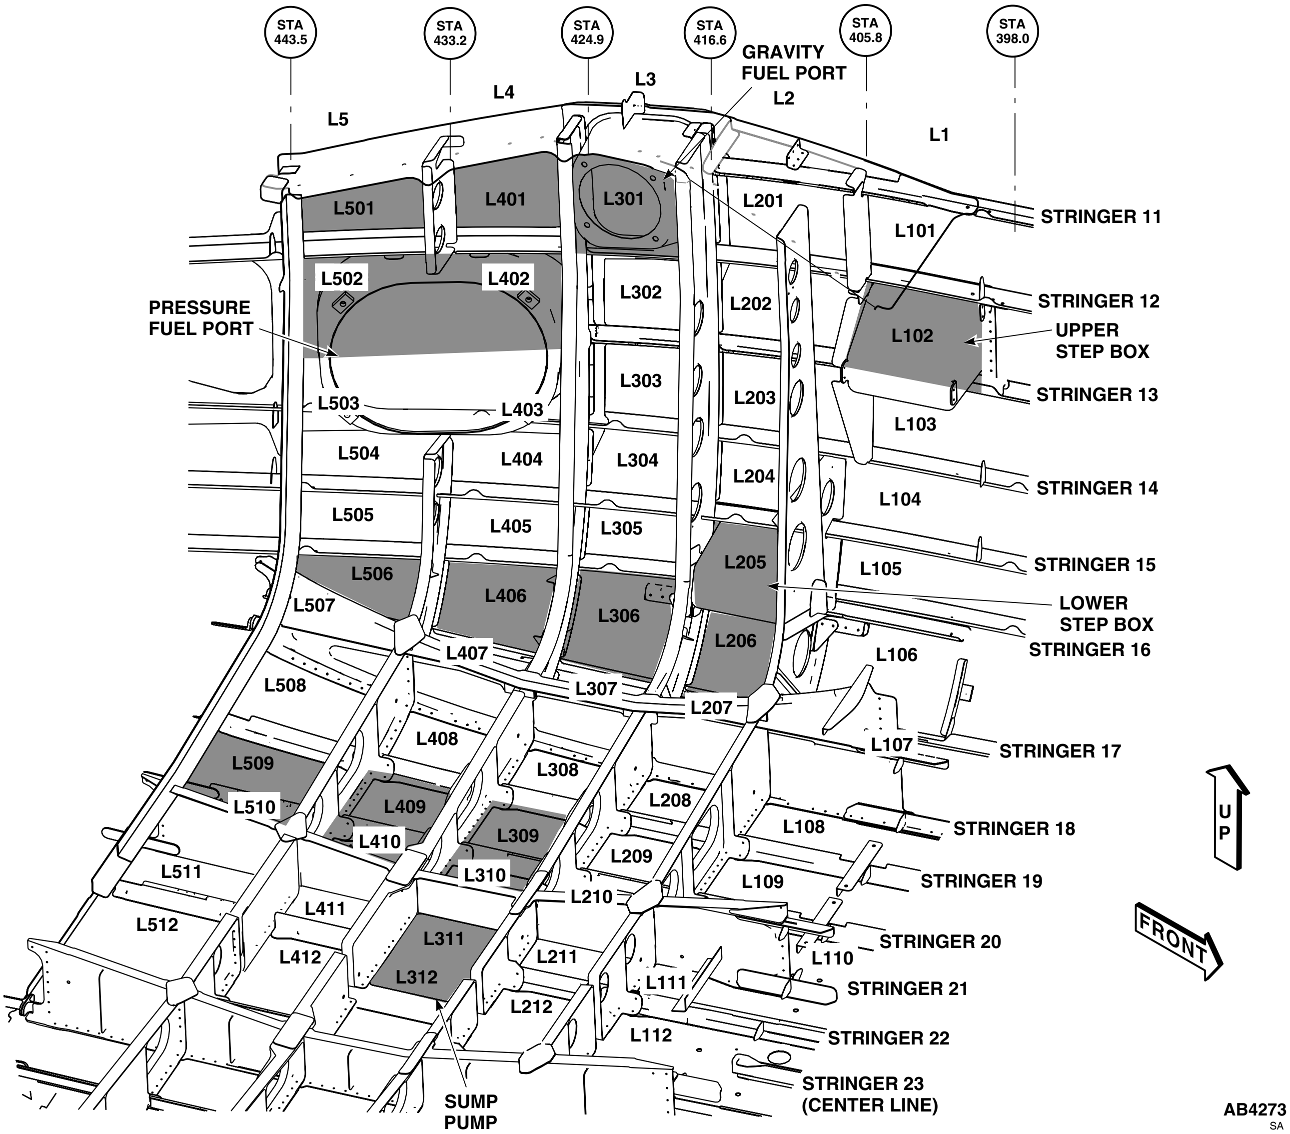

Figure 1. Left Side Fuel Cell Compartments.

c. Inspect compartment L109 and L209 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 17.5L.

d. Inspect compartment L110 and L210 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 11.5L.

e. Inspect compartment L111 and L211 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 5.5L.

f. Inspect compartment L112 and L212 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 1.75L.

g. Inspect compartment L207 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 409.5, BL 30.5L.

**FUEL CELL CORROSION INSPECTION** - Continued

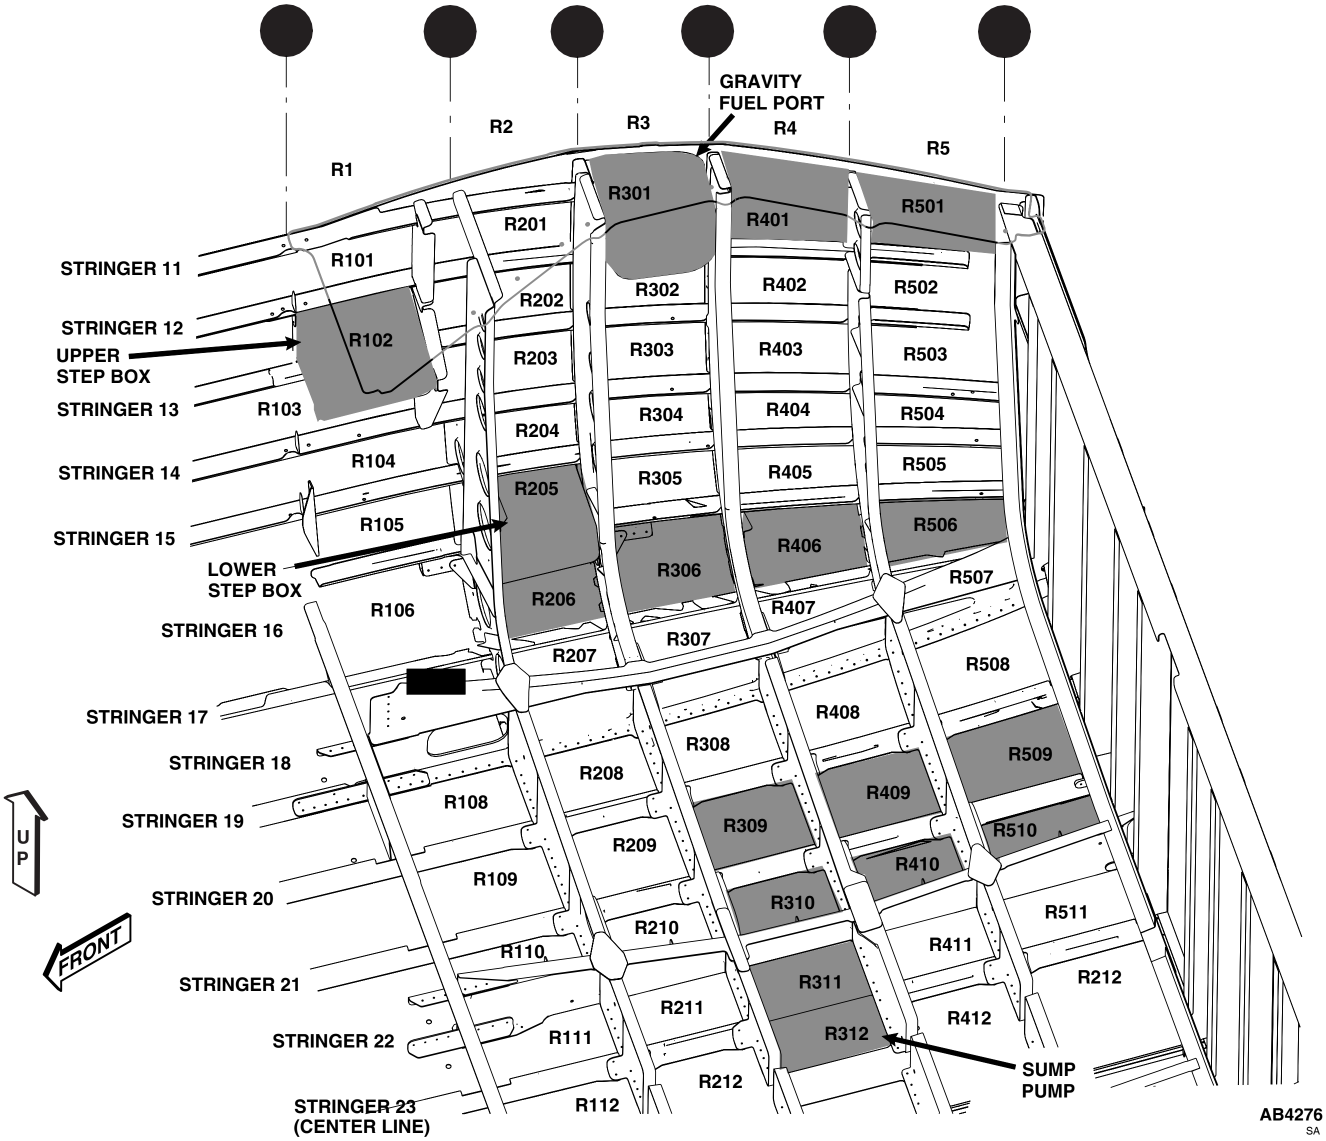

Figure 2. Right Side Fuel Cell Compartments.

h. Inspect compartment L307 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 418.0, BL 30.5L.

i. Inspect compartment L308 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 418.0, BL 24.25L.

j. Inspect compartment L407 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 426.0, BL 30.5L.

k. Inspect compartment L408 and L508 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 426.0, BL 24.25L.

l. Inspect compartment L411 and L511 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 427.0, BL 5.5L.

**FUEL CELL CORROSION INSPECTION** - Continued

m. Inspect compartment L412 and L512 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 427.0, BL 2L.

8. Inspect right underside fuel cell as follows (Figure 2):

a. Inspect compartment R107 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 30.5R.

b. Inspect compartment R108 and R208 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 24.25R.

c. Inspect compartment R109 and R209 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 17.5R.

d. Inspect compartment R110 and R210 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 11.5R.

e. Inspect compartment R111 and R211 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 5.5R.

f. Inspect compartment R112 and R212 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 399.0, BL 1.75R.

g. Inspect compartment R207 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 409.5, BL 30.5R.

h. Inspect compartment R307 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 418.0, BL 30.5R.

i. Inspect compartment R308 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 418.0, BL 24.25R.

j. Inspect compartment R407 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 426.0, BL 30.5R.

k. Inspect compartment R408 and R508 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 426.0, BL 24.25R.

l. Inspect compartment R411 and R511 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 427.0, BL 5.5R.

m. Inspect compartment R412 and R512 for corrosion, mold and deteriorating foam blocks by inserting probe tip approximately 1 - 2 inches through drain hole located at STA 427.0, BL 2R.

9. Inspect left hand side of fuel cell as follows (Figure 1):

## CAUTION

Probe tip must be centered before insertion of probe tip into guide tube, or removal from guide tube. Excessive force should not be used to insert the video probe through the guide tube. Failure to follow maintenance procedures may cause damage to video scope.

## NOTE

While inspecting, the probe tip must be extended past the guide tube at least 2 inches so video scope probe can articulate.

a. Insert video probe through guide tube.

b. Insert guide tube with video scope through 0.50-inch hole in AFT surface of upper step box in transition section.

**FUEL CELL CORROSION INSPECTION** - Continued

c. Determine orientation of probe tip (up or down).

d. Locate lightening hole in stringer 12 (Figure 3).

e. Bend and twist guide tube through lightening hole in stringer 12.

f. Inspect compartment L201 for corrosion, mold and deteriorating foam blocks by putting guide tube through lightening hole in stringer 12. Bend tube as shown in Figure 3. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

g. Inspect compartment L101 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 5. Guide tube will be inserted into aircraft approximately 15 - 18 inches.

h. Inspect compartment L103 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 6. Guide tube will be inserted into aircraft approximately 11 - 14 inches.

i. Inspect compartment L104 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 6 and push probe through guide tube. Use gravity to guide video scope probe.

j. Inspect compartment L105 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 6 and push probe through guide tube. Use gravity to guide video scope probe.

k. Inspect compartment L106 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 6 and push probe through guide tube. Use gravity to guide video scope probe.

l. Inspect compartment L202 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 7. Guide tube will be inserted into aircraft approximately 7 - 8 inches.

m. Inspect compartment L302 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 13. Bend tube as shown in Figure 7. Guide tube will be inserted into aircraft approximately 7 - 8 inches.

n. Inspect compartment L203 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 8. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

o. Inspect compartment L303 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 14. Bend tube as shown in Figure 8. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

p. Inspect compartment L403 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 14. Bend tube as shown in Figure 8. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

q. Inspect compartment L503 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 14. Bend tube as shown in Figure 8. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

r. Inspect compartment L204 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 9. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

s. Inspect compartment L304 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 15. Bend tube as shown in Figure 9. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

t. Inspect compartment L404 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 15. Bend tube as shown in Figure 9. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

u. Inspect compartment L504 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 15. Bend tube as shown in Figure 9. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

v. Insert guide tube with video probe into compartment L204 as shown in Figure 10.

w. Locate lightening hole in frame STA 416.6 as shown in Figure 10.

x. Twist and bend guide tube through lightening hole as shown in Figure 10.

## FUEL CELL CORROSION INSPECTION - Continued

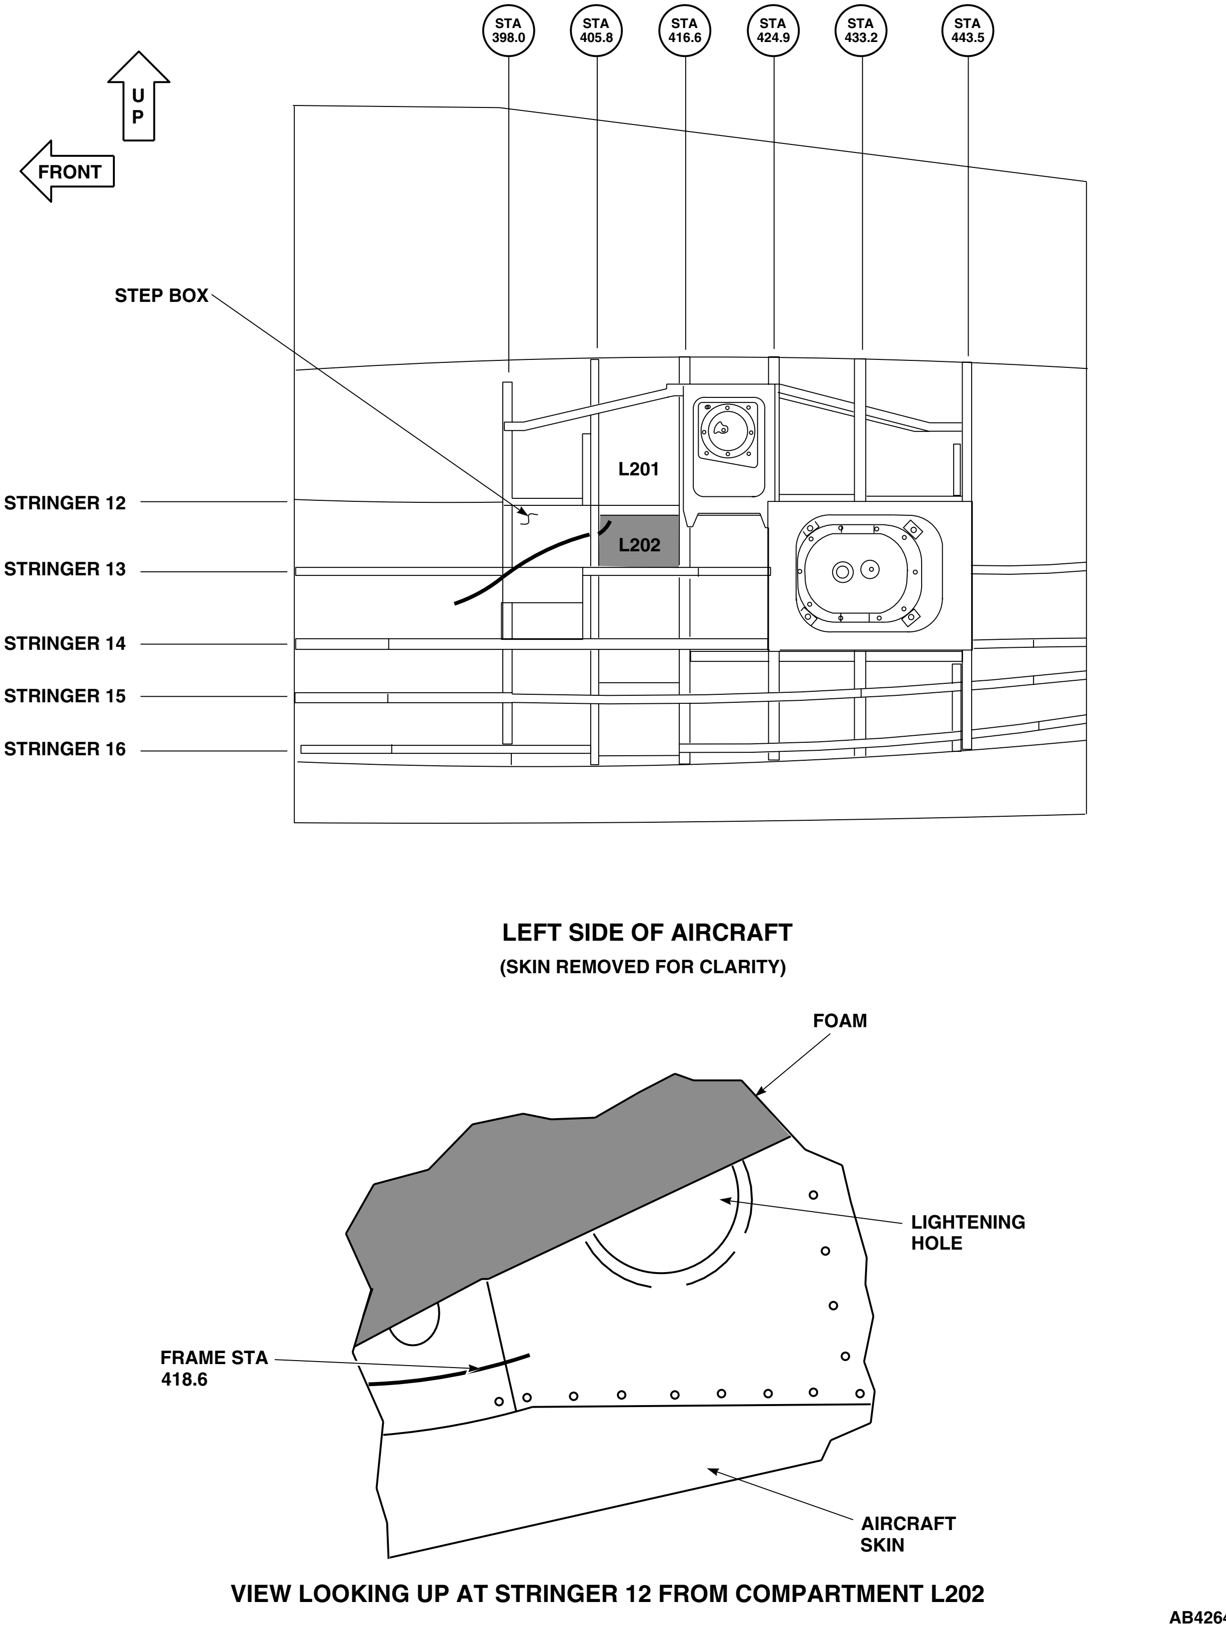

Figure 3. Left Side Stringer 12 Location.

**FUEL CELL CORROSION INSPECTION** - Continued

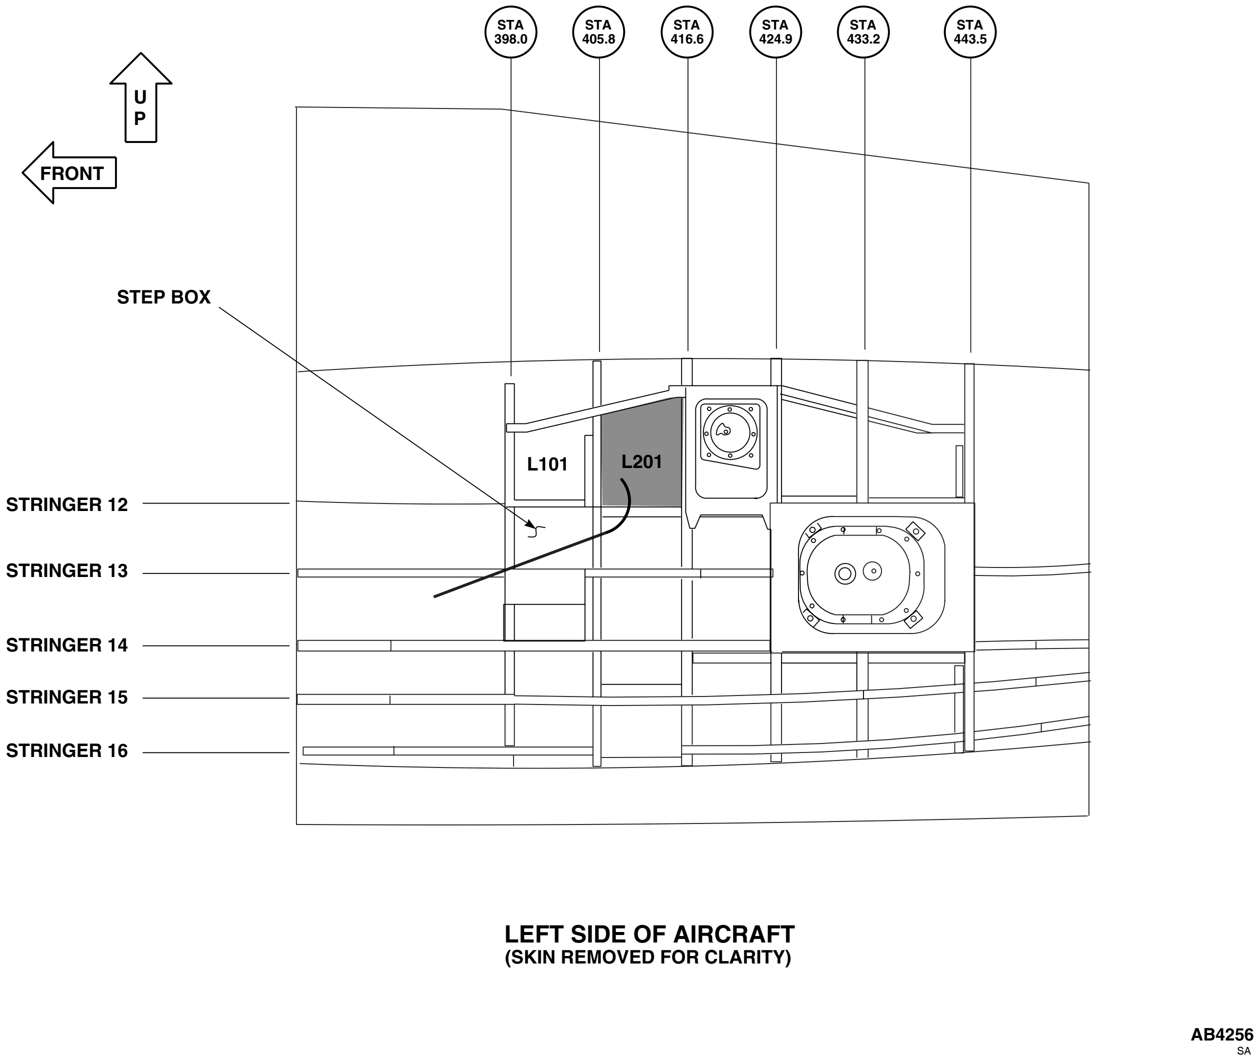

Figure 4. Inspection of Compartment L201.

y. Inspect compartment L305 for corrosion, mold and deteriorating foam blocks by putting guide tube through lightening hole in frame STA 416.6. Bend tube as shown in Figure 11. Guide tube will be inserted into aircraft approximately 13 - 15 inches.

z. Inspect compartment L405 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 16. Bend tube as shown in Figure 11. Guide tube will be inserted into aircraft approximately 13 - 15 inches.

aa. Inspect compartment L505 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 16. Bend tube as shown in Figure 11. Guide tube will be inserted into aircraft approximately 13 - 15 inches.

10. Inspect right hand side of fuel cell as follows (Figure 2):

**FUEL CELL CORROSION INSPECTION** - Continued

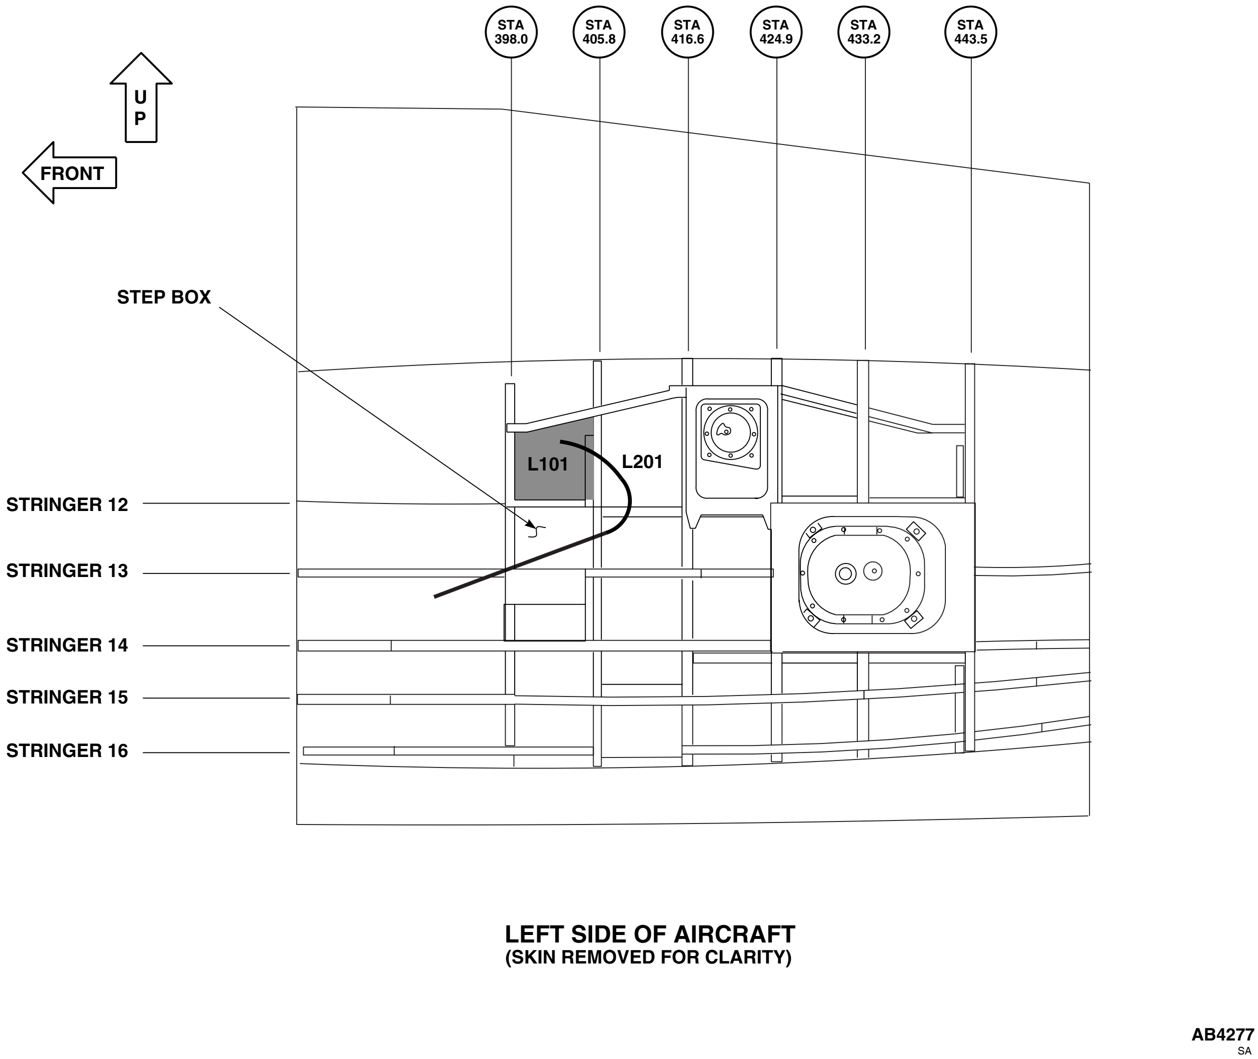

Figure 5. Inspection of Compartment L101.

**FUEL CELL CORROSION INSPECTION** - Continued

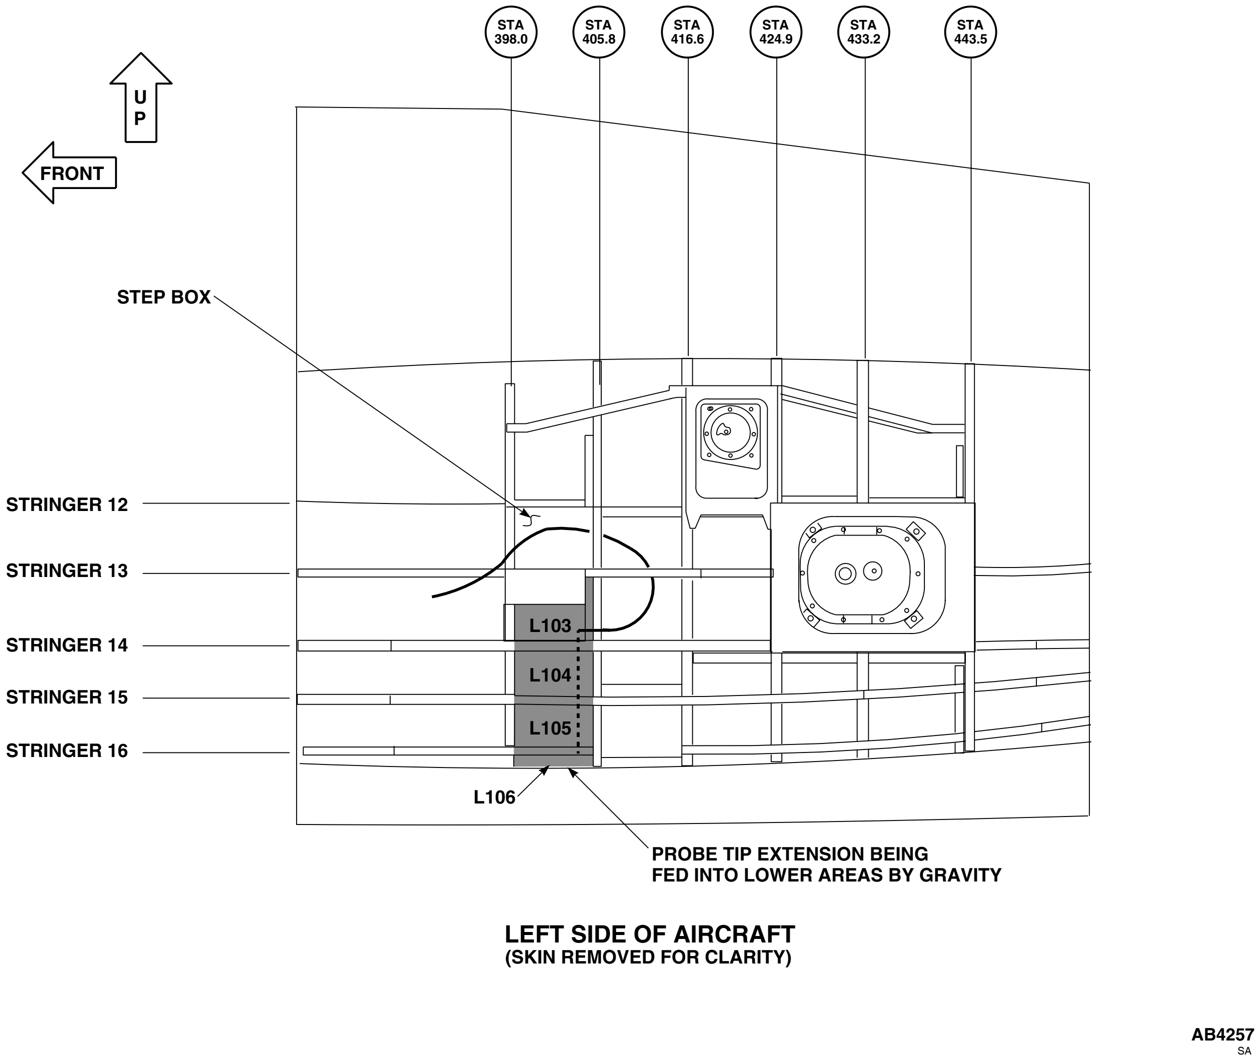

Figure 6. Inspection of Compartments L103, L104, L105, L106.

**FUEL CELL CORROSION INSPECTION** - Continued

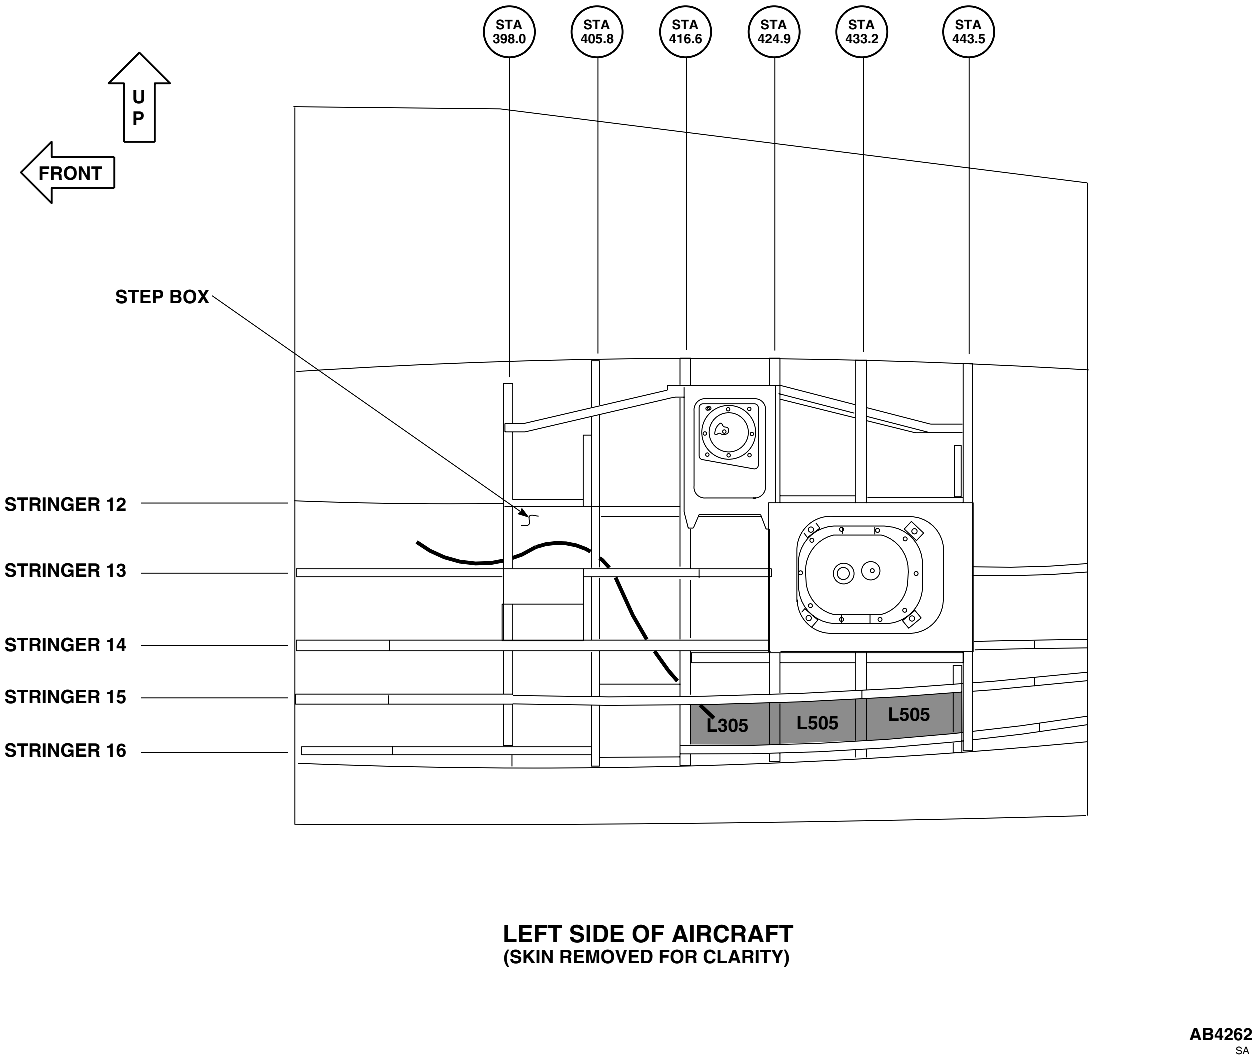

Figure 11. Inspection of Compartments L305, L405, L505.

**FUEL CELL CORROSION INSPECTION** - Continued

## CAUTION

- Prior to inspection of right hand side of aircraft, make sure probe tip has been centered.
- Probe tip must be centered before removal of probe tip from guide tube as inspection progresses. Failure to follow maintenance instructions may damage video scope.

## NOTE

While inspecting, the probe tip must be extended past the guide tube at least 2 inches so video scope probe can articulate.

a. Move scope to right hand side of aircraft and attach grounding clamps of grounding strap to handle on video scope and to aircraft ground.

b. Insert guide tube with video scope through 0.50-inch hole in AFT surface of upper step box in transition section.

c. Determine orientation of probe tip (up or down).

d. Locate lightening hole in stringer 12. (Figure 12).

e. Bend and twist guide tube through lightening hole in stringer 12.

f. Inspect compartment R201 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 13. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

g. Inspect compartment R101 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 14. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

h. Inspect compartment R103 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 15. Guide tube will be inserted into aircraft approximately 11 - 14 inches.

i. Inspect compartment R104 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 15 and push probe through guide tube. Use gravity to guide video scope probe.

j. Inspect compartment R105 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 15 and push probe through guide tube. Use gravity to guide video scope probe.

k. Inspect compartment R106 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 15 and push probe through guide tube. Use gravity to guide video scope probe.

l. Inspect compartment R202 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 16. Guide tube will be inserted into aircraft approximately 7 - 8 inches.

m. Inspect compartment R302 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 13. Bend tube as shown in Figure 16. Guide tube will be inserted into aircraft approximately 7 - 8 inches.

n. Inspect compartment R402 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 13. Bend tube as shown in Figure 16. Guide tube will be inserted into aircraft approximately 7 - 8 inches.

o. Inspect compartment R502 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 13. Bend tube as shown in Figure 16. Guide tube will be inserted into aircraft approximately 7 - 8 inches.

p. Inspect compartment R203 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 17. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

q. Inspect compartment R303 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 14. Bend tube as shown in Figure 17. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

r. Inspect compartment R403 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 14. Bend tube as shown in Figure 17. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

**FUEL CELL CORROSION INSPECTION** - Continued

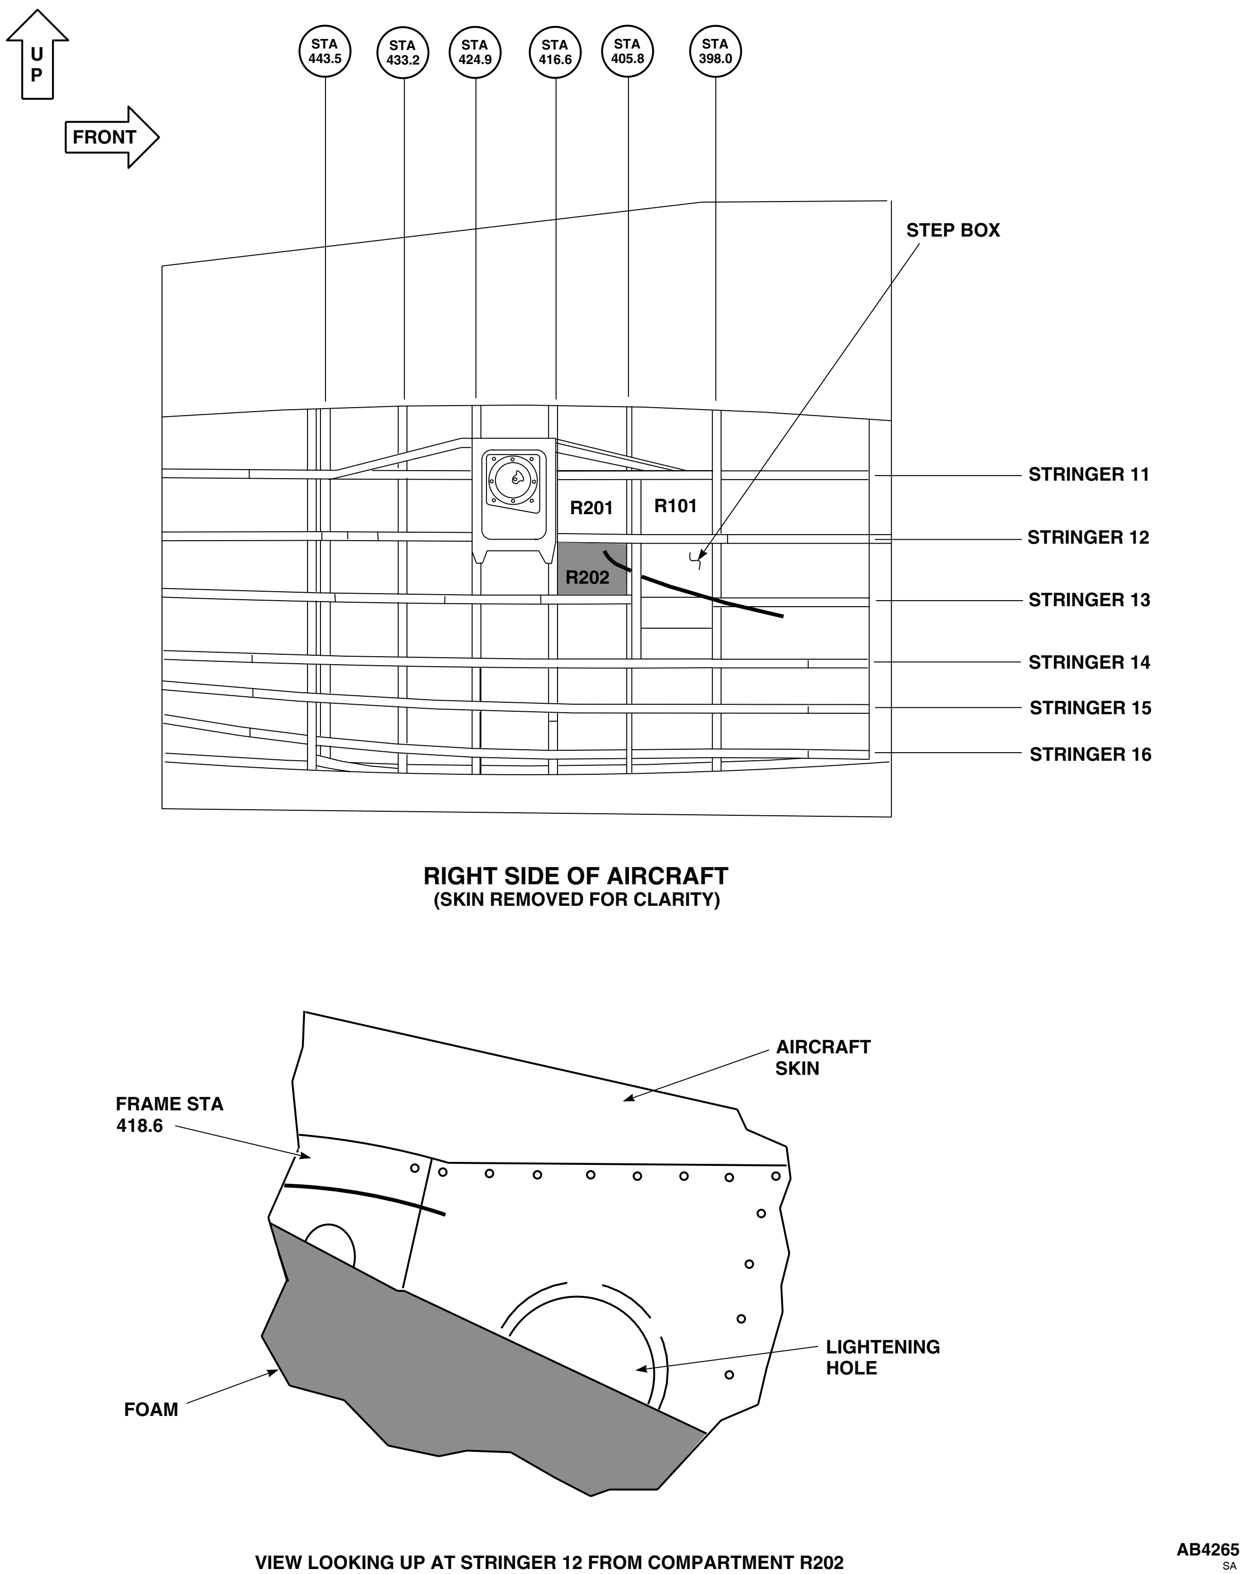

Figure 12. Right Stringer 12 Location.

**FUEL CELL CORROSION INSPECTION** - Continued

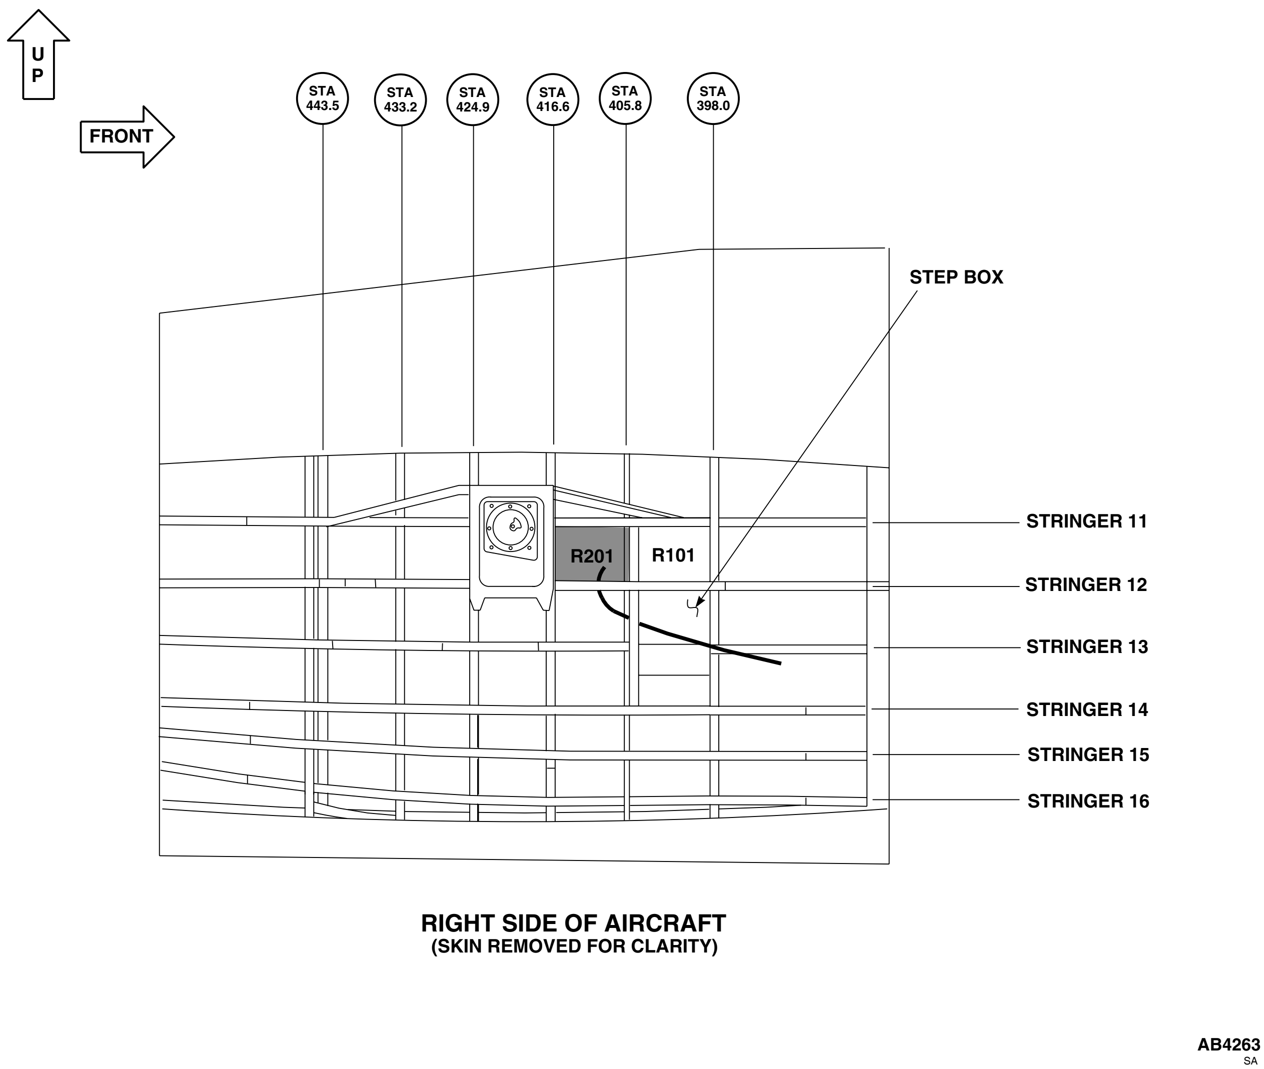

Figure 13. Inspection of Compartment R201.

s. Inspect compartment R503 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 14. Bend tube as shown in Figure 17. Guide tube will be inserted into aircraft approximately 11 - 13 inches.

t. Inspect compartment R204 for corrosion, mold and deteriorating foam blocks. Bend tube as shown in Figure 18. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

u. Inspect compartment R304 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 15. Bend tube as shown in Figure 18. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

v. Inspect compartment R404 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 15. Bend tube as shown in Figure 18. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

w. Inspect compartment R504 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 15. Bend tube as shown in Figure 18. Guide tube will be inserted into aircraft approximately 12 - 15 inches.

**FUEL CELL CORROSION INSPECTION** - Continued

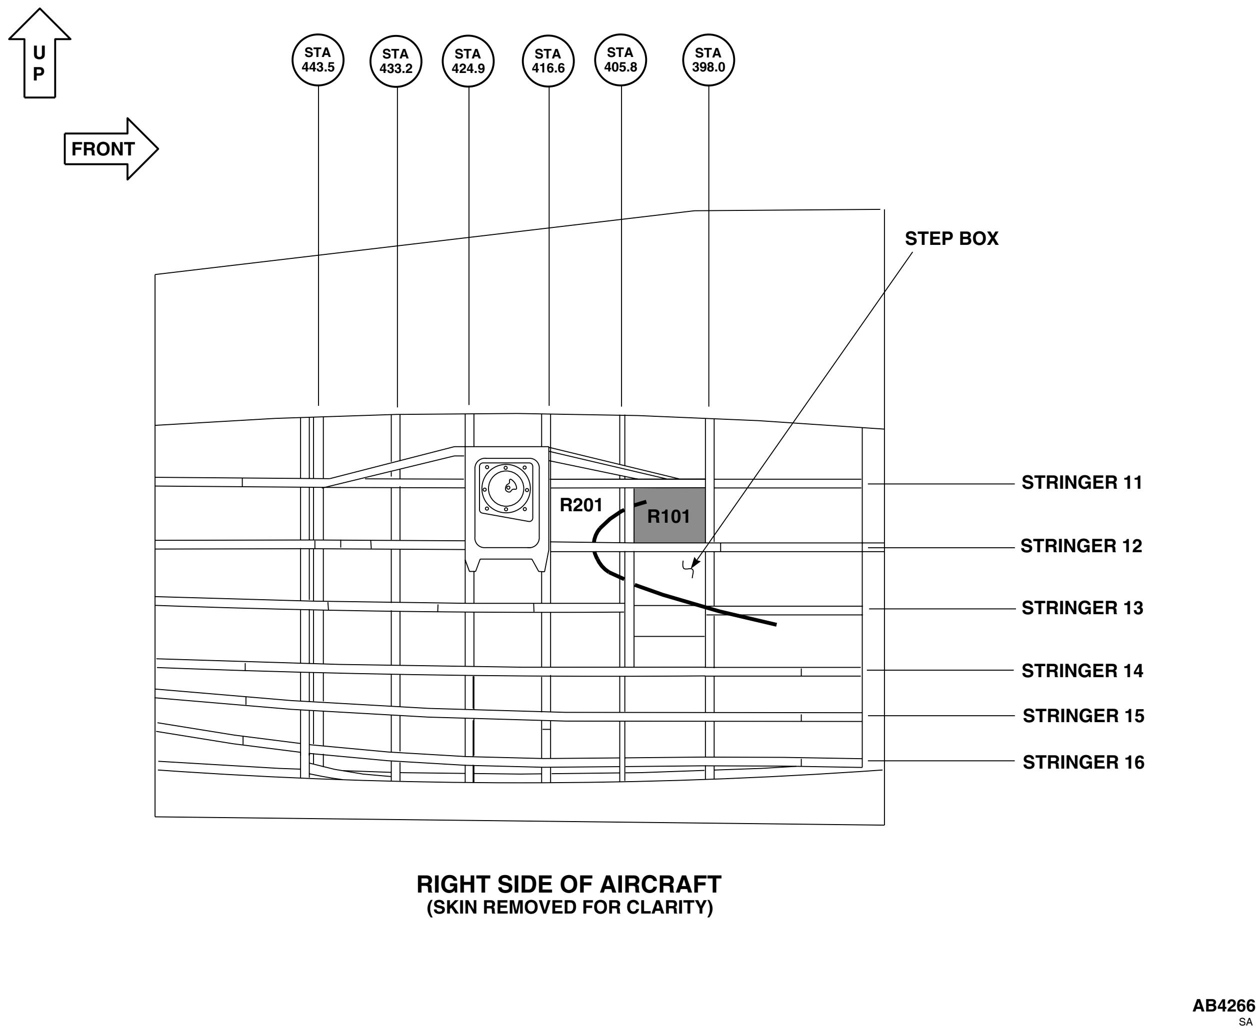

Figure 14. Inspection of Compartment R101.

x. Insert guide tube with video probe into compartment R204 as shown in Figure 19.

y. Locate lightening hole in frame STA 416.6 as shown in Figure 19.

z. Twist and bend guide tube through lightening hole as shown in Figure 19.

aa. Inspect compartment R305 for corrosion, mold and deteriorating foam blocks by putting guide tube through lightening hole in frame STA 416.6. Bend tube as shown in Figure 20. Guide tube will be inserted into aircraft approximately 13 - 15 inches.

ab. Inspect compartment R405 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 16. Bend tube as shown in Figure 20. Guide tube will be inserted into aircraft approximately 13 - 15 inches.

ac. Inspect compartment R505 for corrosion, mold and deteriorating foam blocks by sliding probe along stringer 16. Bend tube as shown in Figure 20. Guide tube will be inserted into aircraft approximately 13 - 15 inches.

**FUEL CELL CORROSION INSPECTION** - Continued

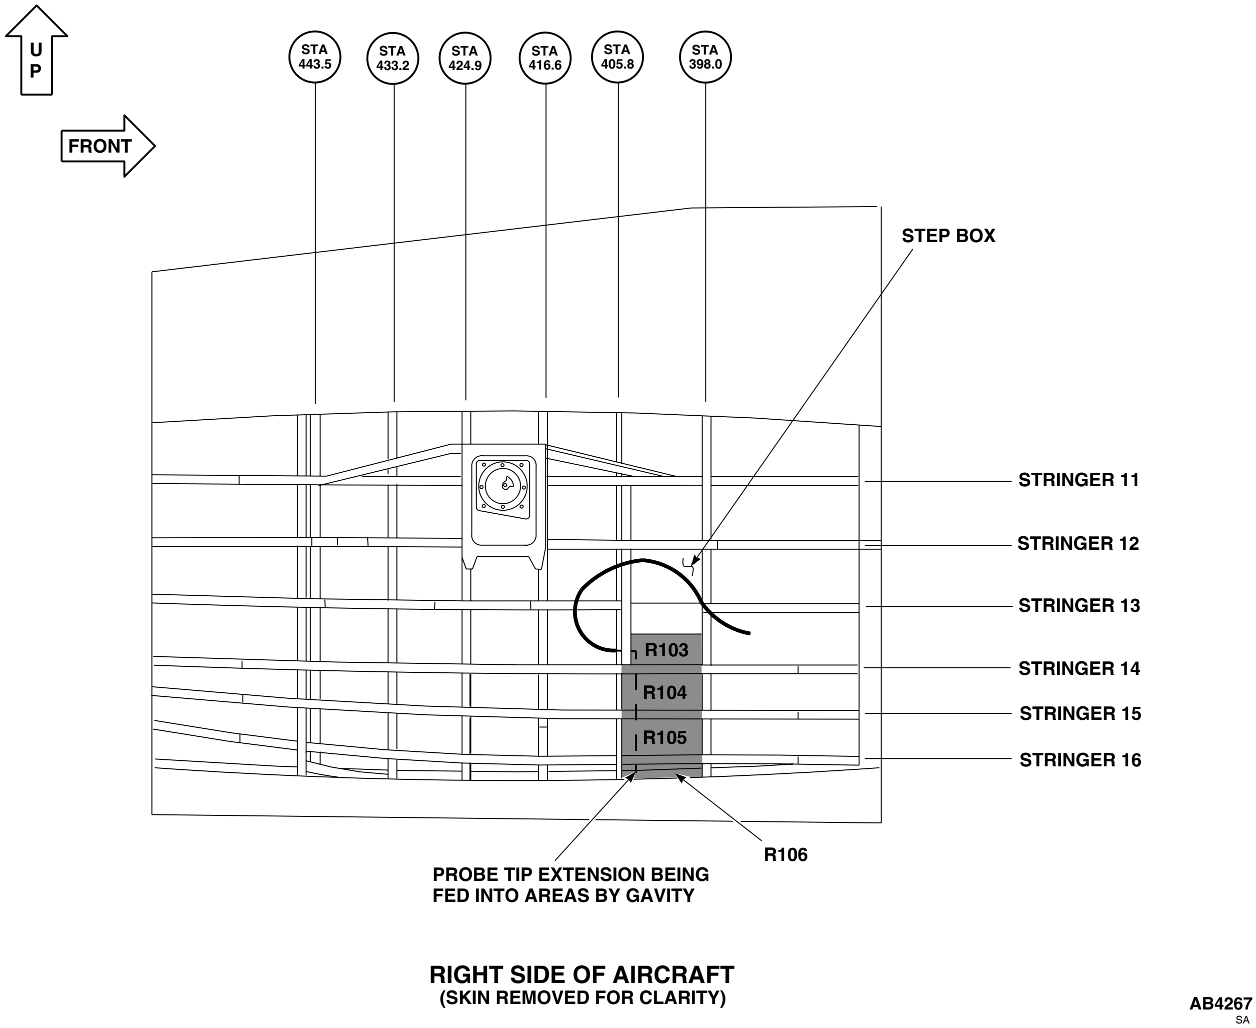

Figure 15. Inspection of Compartments R103, R104, R105, R106.

11. Remove guide tube with video scope.
12. Remove video scope from guide tube.
13. Apply sealing compound, Item 266, WP 1803, to body plugs and install body plugs in upper step boxes on left and right side of aircraft. Ensure proper seal for water integrity corrosion protection with sealing compound.
14. Package video scope per TM 1-4920-475-13&P for storage.

## END OF WORK PACKAGE

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER DUAL-ENGINE OPERATION WITH GUST LOCK ENGAGED

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

### INSPECTION

1. Turn off all electrical power.
2. Squeeze pin levers together at each hinge on oil cooler access door. Remove door.
3. Inspect tail takeoff flange for broken or deformed teeth, check pawl and surrounding areas for cracks.
4. Install oil cooler access door.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER EXCEEDING 145 KIAS WITH CARGO DOORS OPENED

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

### EXCEEDING 145 KIAS

**NOTE**

Do the following before next flight after exceeding 145 KIAS with cargo doors open.

1. Check doors and windows for distortion and damage.
2. Check door tracks, rollers and latching mechanism for damage.
3. Check door for proper operation.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER FIRE EXTINGUISHING SYSTEM DISCHARGE (HALON-TYPE)

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 0142 00
WP 1195 00
WP 1198 00
WP 1200 00

### INSPECTION

1. Remove discharged extinguishing agent container (WP 1195 00).
2. If extinguishing agent was discharged through directional valve to No. 1 engine or APU, remove directional valve (WP 1200 00).

**CAUTION**

Damage to equipment will result if system is flushed with water. Halon becomes corrosive when in contact with water. Use filtered, dry compressed air when purging system.

3. Purge directional valve using filtered, dry compressed air. Check flapper for freedom of movement.
4. Purge discharge tubes using filtered, dry compressed air.
5. Install directional valve (WP 1200 00).
6. Purge engine compartments and APU compartment where extinguishing agent has been discharged using filtered, dry compressed air.
7. Inspect engine compartments and components for damage. Replace damaged parts.
8. Inspect rubber materials and insulations for damage. Replace damaged parts.
9. Replace thermal disc (WP 1198 00).
10. Replace discharged extinguishing agent container with a fully charged container.
11. Install extinguishing agent container (WP 1195 00).
12. Do operational check of fire extinguishing system (WP 0142 00).

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER FIRING CHAFF DISPENSER

**This WP supersedes WP 1710 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**

Aircraft Mechanic's Toolkit, 5180-99-B01
Gloves
Goggles/Face Shield

**Material/Parts**

Acetone, Technical, Item 5, WP 1803 00
Towel, Machinery Wiping, Item 344, WP 1803 00

**Personnel Required**

UH-60 Helicopter Repairer MOS 15T (1)

**References**

WP 1246 00
WP 1247 00
WP 1248 00
WP 1249 00
WP 1803 00

### INSPECTION

## WARNING

Acetone is extremely flammable and toxic to the eyes, skin and respiratory tract. Wear protective gloves and goggles/face shield. Avoid repeated or prolonged contact. Use only in ventilated areas (or use approved respirator as determined by local safety/ industrial hygiene personnel). Keep away from open flames, sparks, not surfaces or other source of ignition.

1. Inspect tail rotor deice slipring and brush assembly for accumulation of chaff.
2. Clean any accumulated chaff from slipring and brush holder with technical acetone, Item 5, WP 1803 00, and machinery wiping towel, Item 344, WP 1803 00.
3. If disassembly of slipring is required to remove chaff, refer to (WP 1246 00, WP 1247 00, WP 1248 00, and WP 1249 00).

### END OF WORK PACKAGE

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER FIRING BRU-22A/A EJECTOR RACK

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Material/Parts**
Corrosion Preventive Compound, Item 105, WP 1803 00

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 1443 00
WP 1645 00
WP 1803 00

### INSPECTION

#### WARNING

Breech cannot be removed or installed with stores loaded on ejector rack. If breech is removed with stores on ejector rack, stores will be released.

1. Clean breech, gun and piston assembly (WP 1645 00).
2. Visually inspect breech, gun, and piston assembly for cracks or breaks (WP 1443 00).
3. Visually inspect breech and piston assembly for missing or broken rings.
4. Visually inspect piston assembly for straightness.
5. Replace breech, gun, or piston assembly as required.
6. Replace missing or broken bearing ring and pressure rings on piston or breech as required (WP 1443 00).
7. Spray breech, gun, and piston assembly lightly using corrosion preventive compound, Item 105, WP 1803 00.

#### NOTE

Make certain breech is fully forward and locked. Close hooks and leave latched at all times when ejector unit is not in use.

8. Assemble breech, gun and piston assembly (WP 1443 00).

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER FIRING MAU-40/A EJECTOR RACK

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

### INSPECTION

**NOTE**

The following inspections must be done after firing explosive squib, regardless of flight hour and/or calendar inspection requirements.

Inspect ejector rack, Table 1, Items 1, 2b, 2c, 3a, 4, 5b, 7, 8, 9, and 17.

**Table 1. MAU-40/A Ejector Rack Inspection and Maintenance Criteria.**

| NOMENCLATURE | INSPECT FOR | REPAIR |
|---|---|---|
| 1. Cartridge Retainers | a. Cracks | Replace |
| | b. Corrosion, nicks, burrs, lubrication | Clean, repair, lubricate or replace |
| | c. Threads damaged | Chase with die or replace |
| 2. Breech Assembly | a. Evidence of gas leakage | Replace packings |
| | b. Corrosion, burrs, nicks, lubrication | Clean, repair, lubricate or replace |
| | c. Metal erosion around firing contact hole | Return to depot |
| 3. Breech Electrical Contact | a. Burned or loose | Replace |
| | b. 0.020 to 0.050-inch firing contact protrusion | Replace, if damaged, adjust |

**INSPECTION** - Continued

**Table 1. MAU-40/A Ejector Rack Inspection and Maintenance Criteria. - Continued**

| NOMENCLATURE | INSPECT FOR | REPAIR |
|---|---|---|
| 4. Slave Piston Assy | a. Evidence of gas leakage | Replace packing |
| | b. Corrosion, nicks, burrs, lubrication | Clean, repair, lubricate or replace |
| | c. Metal erosion | Replace |
| | d. Thread damaged | Chase with die or replace |
| 5. Stores-Away-Switch | a. Plunger not flush with or slightly recessed below switch housing when depressed | Grind or file switch plunger end until flush with switch housing when depressed |
| | b. Binding or bent | Replace |
| 6. Cylinder Block | a. Evidence of gas leakage | Replace packing |
| | b. Corrosion, nicks, burrs, lubrication | Clean, repair, lubricate or replace |
| | c. Metal erosion | Replace or repair |
| 7. Ejection Piston | a. Evidence of gas leakage | Replace packings |
| | b. Corrosion, nicks, burrs, lubrication | Clean, repair, lubricate or replace |
| | c. Metal erosion | Replace |
| 8. Orifice Housing | a. Evidence of gas leakage | Replace packings |
| | b. Corrosion, nicks, burrs, lubrication | Clean, repair, lubricate or replace |
| | c. Metal erosion | Replace |

**INSPECTION** - Continued

**Table 1. MAU-40/A Ejector Rack Inspection and Maintenance Criteria. - Continued**

| NOMENCLATURE | INSPECT FOR | REPAIR |
|---|---|---|
| 9. Orifice Assembly | a. Corrosion, nicks, burrs, lubrication | Clean, repair, lubricate or replace |
| 10. Strike Block | a. Hexagon shape od | Replace |
| 11. Bolts, Screws, Nuts | a. Damaged threads and cracks | Replace |
| | b. Corrosion, nicks, burrs | Clean, repair or replace |
| 12. Packing | a. Wear, damage, and lubrication | Replace and lubricate |
| 13. Electrical Wiring | a. Burnt, chaffed, or wires caught on moving parts which may cause shorting, arming solenoid, 141186, installed in center position | Reposition, secure with ties, replace with solenoid 64D13223-30 |
| | b. Electrical circuits | Troubleshoot, repair and/or replace defective component |

**NOTE**

Failure to apply an even coating of grease to linkage junction points may cause icing problems which may delay or prevent release of in flight safety lock.

| NOMENCLATURE | INSPECT FOR | REPAIR |
|---|---|---|
| 14. Mechanical Linkage | Freedom of movement and proper operation when operating linkage manually | Remove upper close out channel assembly and adjust. lubricate all linkage junction points |

**INSPECTION** - Continued

**Table 1. MAU-40/A Ejector Rack Inspection and Maintenance Criteria. - Continued**

| NOMENCLATURE | INSPECT FOR | REPAIR |
|---|---|---|
| 15. Hook Manual Release | Hooks open or close with torque of 25 to 100 inch-pound manually applied to hook manual release | If torque required to open or close hooks exceeds 100 inch-pounds, disassemble, clean, inspect, lubricate, and reassemble. If opening and closing torque still exceeds 100 inch-pounds rack will require overhaul |
| 16. MAU-40/A | Visually inspect exposed external surfaces for damage and corrosion | Clean, repair or replace |
| 17. Sway Brace Assembly | Cracks, corrosion, nicks, burrs | Clean, lubricate, repair or replace |
| 18. Gas Tube Assembly | Cracks, corrosion, nicks, burrs | Clean, lubricate, repair or replace |

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## AFTER ENGINE OUTPUT SHAFT MAINTENANCE

**This WP supersedes WP 1713 00, dated 17 April 2006.**

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Powerplant Repairer's Toolkit, 5180-99-B07
Torque Wrench, 30 - 200 in. lbs.

**Material/Parts**
Sealing Compound, Item 285, WP 1803 00

**Personnel Required**
Aircraft Powerplant Repairer MOS 15B (1)
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-6625-724-13&P
WP 0481 00
WP 0484 00
WP 0486 00
WP 1803 00

### AFTER ENGINE OUTPUT SHAFT MAINTENANCE (P/N 70361–08004–042, –043).

1. Remove air inlet assembly (WP 0484 00).

## WARNING

## CSI

Verification of minimum torque of bolts is a critical characteristic.

2. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, check torque on three bolts connecting flexible coupling to input module flange while holding nuts as follows:

   a. Initially check bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nuts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

   b. **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ALL BOLTS AND ASSEMBLY HARDWARE CONNECTING DISC PACK TO INPUT FLANGE (WP 0486 00). IF INPUT MODULE FLANGE, 70351-08206-041, WITH NUTPLATES IS USED, REPLACE WITH INPUT MODULE FLANGE, 70351-08206-102, IF AVAILABLE. IF INPUT MODULE FLANGE, 70351-08206-041, IS USED, AFTER TORQUE HAS STABILIZED, PLACE A DROP OF SEALING COMPOUND, Item 307, WP 1803 00, TO THREADS OF BOLTS ADJACENT TO NUTPLATES. MAKE SURE COMPOUND SEEPS INTO NUTPLATES.** Perform engine output shaft vibration check if shaft was disconnected (TM 1-6625-724-13&P).

   c. Check bolts in tightening direction. If input module flange, 70351-08206-102, is used, check torque while holding nut. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

   d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE BOLTS TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 1 to 3 flight hours until torque stabilizes.

   e. If torque does not stabilize after third consecutive torque check, replace three bolts and assembly hardware connecting disc pack to input module flange (WP 0481 00). If input module flange, 70351-08206-041, with nutplates is used, replace with input module flange, 70351-08206-102, if available. If input module flange, 70351-

**AFTER ENGINE OUTPUT SHAFT MAINTENANCE (P/N 70361–08004–042, –043).** - Continued

08206-041, is used, after torque has stabilized, place a drop of sealing compound, Item 285, WP 1803 00, to threads of bolts adjacent to nutplates. Make sure compound seeps into nutplates. Balance engine output shaft (TM 1-6625-724-13&P).

3. On helicopters with engine output drive shaft, 70361 08004-042 or 70361-08004-043, check torque on three nuts securing flexible coupling to engine output shaft by torquing nuts in tightening direction only while holding bolts as follows:

   a. Initially check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

   b. **IF TORQUE ON ANY ONE NUT IS BELOW 90 INCH-POUNDS, REPLACE ENGINE OUTPUT SHAFT.** Perform an engine output shaft balance check if shaft was disconnected (TM 1-6625-724-13&P).

   c. Check nuts in tightening direction while holding bolts. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

   d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 1 to 3 flight hours until torque stabilizes.

   e. If torque does not stabilize after third consecutive torque check, replace engine output shaft assembly. Balance engine output shaft (TM 1-6625-724-13&P).

4. Install air inlet assembly (WP 0484 00).

**AFTER ENGINE OUTPUT SHAFT MAINTENANCE (P/N 70361–08014–041).**

1. Remove air inlet assembly (WP 0484 00).

2. On helicopters with engine output drive shaft, 70361 08014-041, check torque on six bolts securing flange/coupling to engine output shaft by torquing in tightening direction only as follows:

   a. Initially check bolts in tightening direction. **TORQUE MUST NOT BE LESS THAN 90 INCH-POUNDS.**

   b. **IF TORQUE ON ANY ONE BOLT IS BELOW 90 INCH-POUNDS, REPLACE ENGINE OUTPUT SHAFT CONNECTING HARDWARE AND FLANGE/COUPLING** Perform an engine output shaft balance check (TM 1-6625-724-13&P).

   c. Check bolts in tightening direction. **TORQUE MUST NOT BE LESS THAN 130 INCH-POUNDS.**

   d. **IF TORQUE ON ANY BOLT IS BELOW 130 INCH-POUNDS, RETORQUE BOLTS TO 130 - 140 INCH-POUNDS.** Repeat torque check after each 3 to 13 flight hours until torque stabilizes.

   e. If torque does not stabilize after third consecutive torque check, replace engine output shaft assembly connecting hardware and flange/coupling. Balance engine output shaft (TM 1-6625-724-13&P).

3. Install air inlet assembly (WP 0484 00).

# AIRCRAFT GENERAL

# AFTER MAIN ROTOR BLADE CONTACT WITH TAIL ROTOR PYLON OR TAILCONE

## INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 0544 00
WP 1733 00

## INSPECTION

### NOTE

- The following inspection is required when any turning main rotor blades come in contact with tail rotor pylon or tailcone.
- Other inspections may apply depending on circumstances.
- Inspect spindle bearings on spindle being replaced to determine if bearing is serviceable. If bearing is serviceable it may be used on replacement spindle.

1. **REPLACE ALL SPINDLES REGARDLESS OF THE EXTENT OF DAMAGE TO BLADE(S), TAIL PYLON OR TAILCONE.** Clearly tag spindles ″DAMAGE OCCURRED DUE TO BLADE STRIKING TAIL PYLON/TAILCONE″. Also, explain the severity of damage to tailcone or tail pylon.
2. Inspect the hub arm ID (4 places) for damage caused by spindle retention nut contact. If evidence of contact is found, replace hub. Clearly tag hub ″DAMAGE OCCURRED DUE TO BLADE STRIKING TAIL PYLON/TAILCONE″. Also, explain the severity of damage to tailcone or tail pylon.
3. Inspect main rotor blade(s) paying particular attention to the inboard five foot section. If damage to blade(s) is less than accept/reject criteria, repair blade(s) and return to service. If damage is greater than accept/reject criteria remove blade(s) and return to depot. Clearly tag blade(s) ″BLADE DAMAGE OCCURRED DUE TO BLADE STRIKING TAIL PYLON/TAILCONE″. Also, explain the severity of damage to tailcone or tail pylon (WP 0544 00).
4. Perform sudden stoppage inspection (WP 1733 00).

**END OF WORK PACKAGE**

## AIRCRAFT GENERAL

## AFTER MAIN ROTOR BLADE CONTACT WITH ALQ-144 IR JAMMER

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 11-1520-237-23
WP 0544 00
WP 1733 00

### INSPECTION

**NOTE**

The following inspection is required when main rotor blades come in contact with ALQ-144 IR jammer for any reason other than hard landing.

1. Inspect main rotor blades for damage as follows:
   a. Inspect main rotor blades (WP 0544 00).
   b. If damage to blades is within limits, repair blades and continue this inspection.
   c. If damage to blades exceeds limits, perform sudden stoppage inspection (WP 1733 00).
2. Inspect droop stop ears for cracks. If cracks are found, replace spherical bearing. Clearly tag bearing ″DAMAGE OCCURRED DUE TO EXCESSIVE BLADE FLAPPING.″ Note on tag what components were hit and severity of damage to helicopter parts.
3. Inspect hub arm ID (inside diameter) for damage caused by spindle retention nut contact. If evidence of contact is found, replace spindle and hub. Clearly tag spindle ″DAMAGE OCCURRED DUE TO EXCESSIVE BLADE FLAPPING.″ Note on tag what components were hit and severity of damage to helicopter parts.
4. Inspect ALQ-144 IR jammer for damage. If no damage is found, perform operational check (TM 11-1520-237-23). If damaged is found replace unit (TM 11-1520-237-23).

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TB 43-0211
WP 0616 00
WP 0622 00
WP 0628 00

## AOAP SAMPLING

### NOTE

- **UH-60A EH-60A HH-60A** Sampling of main gear box is required.
- Sampling of intermediate and tail gear boxes is required.
- Information and instructions relative to AOAP are given in TB 43-0211.
- AOAP sample reports are considered advisory in nature and cannot be used as a sole basis for determining the airworthiness of a transmission or a gear box. If an AOAP laboratory reports ananomalous oil sample results and/or recommends removal of an otherwise normally functioning gearbox, contact the Logistics Assistance Representative or Liaison Engineer for assistance.

1. Obtain an oil sample from main, intermediate or tail gear box (TB 43-0211).
2. If no chips are detected, submit sample to AOAP lab and return helicopter to service.
3. If chips are present in sample, evaluate chips (WP 0616 00, WP 0622 00, WP 0628 00).
4. If no action is required, enclose chips in suitable container and submit chips and oil sample to AOAP laboratory. Return helicopter to service.
5. If serviceability check is required, perform check and take corrective action (WP 0616 00, WP 0622 00, and WP 0628 00).
6. When Oil Analysis and Feedback Form, DA Form 3254-R, is received from the AOAP laboratory, take the corrective action that is recommended by the laboratory. If any problems arise because of the recommendation made by the laboratory, contact AMCOM Engineering, for assistance.

WP 0741 00
WP 0755 00
WP 1441 00
WP 1603 00
WP 1700 00

## INSPECTION

### NOTE

Inspect ejector rack before loading stores.

1. Place ejector unit safety stop lever to unlocked position. Open aft suspension hook and close forward suspension hook. Turn safety stop lever toward locked position. **SAFETY STOP LEVER MUST NOT GO TO LOCKED POSITION.** If safety stop lever moves into the locked position, replace ejector rack (WP 1441 00).
2. Place safety stop lever to unlocked position. Open forward suspension hook and close aft suspension hook. Turn safety stop lever toward locked position. **SAFETY STOP LEVER MUST NOT GO TO LOCKED POSITION.** If safety stop lever moves into the locked position, replace ejector rack (WP 1441 00).
3. Place safety stop lever to unlocked position. Close both suspension hooks. Turn safety stop lever toward locked position. **SAFETY STOP LEVER MUST GO TO LOCKED POSITION (SAFETY STOP LEVER BALL PLUNGER DROPS INTO SAFETY BUSHING DETENT).** If safety stop lever does not move into the locked position, replace ejector rack (WP 1441 00).
4. Pull forward on manual release lever. **SUSPENSION HOOKS MUST NOT OPEN.** If suspension hooks open, replace ejector rack (WP 1441 00).
5. Place safety stop lever to unlocked position. Pull forward on manual release lever. **BOTH SUSPENSION HOOKS SHALL SNAP OPEN.** If suspension hooks do not open, replace ejector rack (WP 1441 00).
6. Inspect all visible ejector unit wiring for frayed or burned insulation and broken wires. **NONE ALLOWED.** If frayed or burned insulation or broken wires are found, replace ejector rack (WP 1441 00).
7. Inspect electrical connectors and receptacles for dirt, moisture or other contaminants. Remove dirt, moisture, or contamination using dry, compressed air.
8. Inspect electrical connectors and receptacles for broken or damaged pins, thread damage, cracked or deformed shell, cracked or loose potting, and corrosion. **NONE ALLOWED.** If broken or damaged pins, thread damage, cracked or deformed shell, cracked or loose potting, or corrosion is found, replace ejector rack (WP 1441 00).
9. Inspect ejector unit assembly for deep scratches, dents, or fractures to housing and swaybraces that may affect structural integrity of the ejector unit. **NONE ALLOWED.** If deep scratches, dents, or fractures to housing and swaybraces are found to affect the structural integrity of the unit, replace ejector rack (WP 1441 00).

**INSPECTION** - Continued

10. Inspect ejector unit for damage that may affect proper latching and unlatching of hooks. **NONE ALLOWED.** If damage is found that may affect proper latching and unlatching of hooks, replace ejector rack (WP 1441 00).
11. Inspect ejector unit for loose swaybrace attaching hardware. **NONE ALLOWED.** If loose swaybrace/attaching hardware is found, tighten hardware.

## INSPECT HYDRAULIC SYSTEM COMPONENTS

### NOTE

The following inspection is for helicopters operating in desert environment or for helicopters whose temperature label shows black to 270°F(132°C). Tempilabel shows black to 275°F(135°C).

1. Inspect bleed valve drain line on hydraulic pump. If drain line shows signs of melting replace drain line and hydraulic pump (WP 0706 00 and WP 0741 00).
2. Inspect hydraulic fluid as follows:
   a. Drain a small amount of hydraulic fluid from pump module bleed/relief valve. Check hydraulic fluid for discoloration.
   b. If hydraulic fluid is red in color, add same amount of fluid removed to hydraulic reservoir (WP 1603 00).
   c. If hydraulic fluid is brownish, drain entire reservoir, flush fluid from affected system, and reservice reservoir (WP 1603 00 and WP 0755 00).
3. Check hydraulic system components for leakage. Replace seals or components as required if leakage is excessive.

## INSPECT MAU-40/A EJECTOR RACK

1. Visually inspect exposed external surfaces of ejector rack for damage and corrosion.
2. Visually inspect electrical wiring and connectors for frayed or burnt insulation or broken wires.
3. Visually inspect sway brace for damage or corrosion.

## INSPECT EACH MAIN LANDING GEAR DRAG BEAM

Refer to WP 1700 00.

UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-6625-724-13&P
WP 0481 00
WP 0486 00
WP 0655 00

---

**INSPECTION**

### NOTE

The following step will be done whenever the engine output shaft is removed or bolts are untorqued.

1. Remove engine output shaft from input module (WP 0486 00).
2. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043,inspect input module flange assembly, for fretting in washer contact area (WP 0655 00).

### WARNING

### CSI

Verification of minimum torque is a critical characteristic.

3. **PERFORM TORQUE CHECK ON THE INPUT MODULE FLANGE NUT. TORQUE NUT IN TIGHTENING DIRECTION. TORQUE NUT TO 646 - 714 INCH-POUNDS.**

**INSPECTION** - Continued

## NOTE

- On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, hardware used to secure disc pack coupling to input module flange is a balanced set. If any individual piece of hardware is to be replaced, replace all hardware with the correct balanced hardware kit.
- On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, hardware kit, 70000-30100-043, may be used with either input module flange, 70351-08206-041 or 70351-08206-102.
- On helicopters with engine output drive shaft, 70361-08014-041, use hardware kit, 70000-30100-044, with flange/coupling, 70351-08255-102.

4. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, visually inspect the three installation bolts for burrs. Replace bolts if burrs are found (WP 0481 00).
5. On helicopters with engine output drive shaft, 70361-08014-041, visually inspect six installation bolts for burrs. Replace bolts if burrs are found (WP 0481 00).
6. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043,, inspect installation bolts for binding in disc pack coupling assembly by inserting bolts in disc pack only and checking for freedom of rotation. Bolts must be able to be turned by hand. If not, reject bolts (WP 0486 00).
7. Perform engine output shaft vibration level check prior to next flight (TM 1-6625-724-13&P).
8. Record vibration data for each shaft on DA form 2408-15-2.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## ENGINE WHINE/HIGH FREQUENCY VIBRATION INSPECTION

**This WP supersedes WP 1721 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
Aircraft Powerplant Repairer MOS 15B (1)
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-2840-248-23
TM 1-6625-724-13&P
WP 0486 00
WP 0655 00

### INSPECTION

1. If a loud whine or high frequency vibration can be identified as coming from No. 1 or No. 2 gear box input area, do this:
   a. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, reduce the suspected engine power to ground idle with opposite engine driving the main rotor at 100% Nr. If whine increases in volume at about 85% Ng, replace the suspected engine output shaft assembly (WP 0486 00) and input module flange (WP 0655 00).
   b. On helicopters with engine output drive shaft, 70361-08014-041, reduce the suspected engine power to ground idle with opposite engine driving the main rotor at 100% Nr. If whine increases in volume at about 85% Ng, remove and inspect input flange/coupling (WP 0655 00), and then perform engine output shaft vibration check (TM 1-6625-724-13&P).
   c. Make entry on appropriate forms.
2. If whine does not increase, shutdown opposite engine. Increase throttle of the affected engine to fly position. Increase and decrease collective pitch. If the whine changes pitch at the same time Ng speed changes, perform borescope inspection (TM 1-2840-248-23).
3. On helicopters with engine output drive shaft, 70361-08004-042 or 70361-08004-043, if borescope inspection shows no signs of foreign object damage to engine compressor, replace the engine output shaft assembly (WP 0486 00) and input module flange (WP 0655 00).
4. On helicopters with engine output drive shaft, 70361-08014-041, if borescope inspection shows no signs of foreign object damage to engine compressor, remove and inspect input flange/coupling (WP 0655 00) and then perform engine output shaft vibration level check (TM 1-6625-724-13&P).

WP 0689 00
WP 1428 00
WP 1597 00
WP 1599 00

### INSPECTION

1. Inspect main landing gear attachment points, hardware, and surrounding structure.
2. Visually inspect the axle, wheel, drag beam assembly, drag beam support fitting, bolts, and pins for cracks, deformation, or loose hardware.
3. Remove fairing assemblies and floor panels (WP 0286 00 and WP 0262 00 00).
4. Inspect skins and stringers in the area of the drag beam support fitting for cracks, deformation, and loose or sheared rivets.
5. Inspect tub interior, especially in area of landing gear, for damage, distortion, foreign matter, and corrosion.
6. Repair or replace components that show evidence of cracks, looseness, or permanent deformation (WP 0388 00 00).
7. Inspect tail landing gear attachment points and surrounding structure.
8. Visually inspect the axle, wheel, fork assembly, shock strut, yoke support fitting, shock strut support fitting, bolts, and pins for cracks, deformation, or loose hardware.
9. Remove fairing assemblies and access covers (WP 0291 00).
10. Inspect skins and stringers in the area of the yoke support and shock strut support fittings for cracks, deformation, and loose or sheared rivets.
11. Inspect tailcone skins and stringers for cracks, deformations, and loose or sheared rivets.
12. Open tailcone drive shaft covers and inspect drive shaft supports (WP 0327 00).
13. Do tail drive shaft alignment check (WP 0689 00).
14. Remove landing gear fairings (WP 0286 00).
15. Inspect lower shear deck weband corner longerons between yoke support and fold point.

**INSPECTION** - Continued

16. Fluorescent penetrant inspect tailcone fold fitting aft side between the centerlines of upper shear pins and upper lightening holes (TM 1-1520-265-23).
17. Repair or replace components that show evidence of cracks, leakage, or deformation (WP 0415 00).
18. Service main and tail landing gear struts (WP 1597 00 and WP 1599 00 00).
19. Inspect inside of hub arm for signs of contact with spindle retention nut. If evidence of contact is found, replace spindles and hub. Tag components ″DAMAGE OCCURRED DUE TO EXCESSIVE BLADE FLAPPING″.
20. Inspect droop stop ears for cracks. If ear is cracked, replace elastomeric bearing assembly. Tag removed spindle ″DAMAGE OCCURRED DUE TO EXCESSIVE BLADE FLAPPING″.
21. Inspect radar warning system blade antenna, AN/APR-39, for damage and distortion.
22. Inspect fuel system breakaway valves for visible yellow line around center of valve. If yellow line is visible, replace valve.
23. Evaluate operational readiness and recommend corrective action.
24. If main rotor blades contacted tailcone, pylon, or IR jammer with or without blade tip damage, do this:
    a. Replace spindles (WP 0551 00). Tag spindle ″POSSIBLE DAMAGE OCCURRED DUE TO BLADE STRIKE″. Also note what blade contacted.
    b. Inspect hub for damage WP 0548 00 00). If hub will be replaced, tag damaged hub ″DAMAGE OCCURRED DUE TO EXCESSIVE BLADE FLAPPING″.
25. Check oil cooler drive shaft for preloading, as follows:
    a. Disconnect Section II tail rotor drive shaft near No. 1 viscous damper (WP 0667 00).
    b. Remove bolts attaching rear oil cooler support.

**WARNING**

**CSI**

Verification of preload is a critical characteristic.

    c. Using dial indicating scale, make sure that no more than 10 pounds of force is needed to align rear oil cooler support boltholes with boltholes in bearing flange.
    d. **IF PRELOAD IS MORE THAN 10 POUNDS, REPLACE OIL COOLER.**

**WARNING**

**CSI**

Verification of torque is a critical characteristic.

    e. If preload is 10 pounds or less, install oil cooler rear support to bearing support with bolts, washers, shims and nuts. **TORQUE NUTS TO 115 - 125 INCH-POUNDS.** Make sure shimming procedures in WP 0678 00 are followed.
    f. Reconnect Section II tail rotor drive shaft (WP 0667 00).
26. If ESSS was installed, inspect as follows:
    a. Remove upper and lower ESSS fairings (WP 1428 00).
    b. Inspect upper and lower attachment fittings, surrounding structure, and struts for damage, deformation, and cracks.

**INSPECTION** - Continued

c. If 230 gallon external fuel tanks were installed, inspect as follows:

(1) Inspect external tank suspension lugs, suspension lug bushings, and the structure around lugs for damage, deformation, delamination, or any indication of movement.

(2) **IF DAMAGE IS LOCATED WITHIN 6 INCHES OF THE LUGS, TANK MUST BE RETURNED TO CONTRACTOR.**

(3) If no damage is found and tank passes functional check, it may be returned to service.

d. Install upper and lower ESSS fairings (WP 1428 00).

WP 1128 00
WP 1129 00

## INSPECTIONS

### NOTE

This inspection only pertains if the pitch control rods were connected when blade folding was attempted and the blade fell from the spindle.

1. Inspect elastomeric bearing (WP 0534 00).
2. Inspect control rods, clevises, four rotating push rods, rotating and stationary swashplate, bellcranks, links, pushrods, primary servos, shafts and linkages in the mixer. Inspect parts for looseness, distortion, misalignment, cracks, nicks, bearing abnormality and elongated rivets. Special attention should be given to linkages between stationary swashplate. Replace damaged parts (WP 0551 00, WP 0563 00, WP 1089 00, WP 1091 00, WP 1094 00, WP 1102 00, andWP 1120 00 through WP 1127 00.

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## MAIN ROTOR BLADES SUBJECT TO HIGH WINDS

### INITIAL SETUP:

**Tools and Special Tools**

Aircraft Mechanic’s Toolkit, 5180-99-B01
Fluorescent Penetrant Inspection Kit, XMA101

**Personnel Required**

UH-60 Helicopter Repairer MOS 15T (1)

**References**

TM 1-1520-265-23
WP 0544 00
WP 0554 00
WP 1037 00

### INSPECTION

1. If main rotor blades are subjected to winds great enough to break anti-flap bracket, do this:

**NOTE**

Refer to WP 0554 00 for maintenance procedures and damage limitations.

a. Remove and replace main rotor spindle assembly without elastomeric bearings, and return to approved overhaul facility with tag stating ″DAMAGE OCCURRED DUE TO EXCESSIVE WINDS″.

b. Inspect inside of main rotor hub for evidence of contact by spindle nut.

c. Inspect elastomeric bearing endplate for nicks and gouges.

d. Inspect elastomeric bearing for rubber disbond.

e. Inspect droop stop attachment ears for cracks. **NO CRACKS ALLOWED.** If crack is found, replace elastomeric bearing assembly with spindle. Tag bearing ″DAMAGE OCCURRED DUE TO EXCESSIVE WINDS″.

f. Inspect main rotor blades for abnormal twists and bends (pay particular attention to inboard 5 foot section of blade).

g. Coin-tap inboard 5 foot section of blade over spar to check bonding (WP 0544 00).

h. Visually inspect flight control rods and linkages between main rotor head and pilot-assist servos (pay particular attention to mixer, mixer limiter bearings, and cams).

i. Do a main rotor rig/check (WP 1037 00).

2. If main rotor blades are subjected to winds great enough to roll over and/or peen anti-flap stop plate, but not break anti-flap bracket, do this:

**NOTE**

Refer to WP 0554 00 for maintenance procedures and damage limitations.

a. Remove anti-flap bracket.

b. Inspect inside of main rotor hub for evidence of contact by spindle nut.

c. Fluorescent penetrant inspect, Type II, Method C, anti-flap bracket (TM 1-1520-265-23). If anti-flap bracket is broken, remove and replace spindle assembly and anti-flap bracket assembly. Tag parts ″DAMAGE OCCURRED DUE TO EXCESSIVE WINDS″.

d. Inspect elastomeric bearing endplate for nicks and gouges.

**INSPECTION** - Continued

e. Inspect elastomeric bearing for rubber disbond.

f. Inspect droop stop attachment ears for cracks. **NO CRACKS ALLOWED.** If crack is found, replace elastomeric bearing assembly with spindle. Tag bearing ″DAMAGE OCCURRED DUE TO EXCESSIVE WINDS″.

g. Inspect main rotor blades for abnormal twists and bends (pay particular attention to inboard 5 foot section of blade).

h. Coin tap inboard 5 foot section of blade over spar to check bonding (WP 0544 00).

i. Visually inspect flight control rods and linkages between main rotor head and pilot assist servos (pay particular attention to mixer, mixer limiter bearings, and cams).

j. Do a main rotor rig/check (WP 1037 00).

TM 1-1500-328-23

## INSPECTION

1. If droop stop pounding is experienced, inspect droop stop ears (on elastomeric bearing end plate) for cracks. If one or two ears are cracked, remove and replace elastomeric bearing.
2. Inspect inside of hub arm for signs of contact with spindle retention nut. If contact is found, remove and scrap spindle (TM 1-1500-328-23) and return hub to depot with tag stating ″DAMAGE DUE TO EXCESSIVE SPINDLE FLAPPING″.
3. If main rotor blades contact tailcone/pylon, remove and scrap spindle (TM 1-1500-328-23) and return hub to depot with tag stating ″DAMAGE DUE TO EXCESSIVE BLADE FLAPPING″.

## OPERATING HELICOPTER IN EROSIVE CONDITIONS

**This WP supersedes WP 1728 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, SC 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-1520-237-10
TM 9-1095-208-23-2&P
WP 0539 00
WP 1631 00
WP 1632 00
WP 1634 00
WP 1635 00

### INSPECTION

**NOTE**

Items in this section are minimum requirements for helicopters operating in erosive environments. Areas to be inspected and frequency of inspection will depend on severity of erosive environment.

1. Clean swashplate guide and spherical bearing (WP 1635 00).
2. Inspect swashplate guide and spherical bearing (WP 0539 00).
3. Clean main rotor blade pins (WP 1634 00).
4. Clean helicopter exterior (WP 1631 00).

**NOTE**

Wash engines of aircraft operated within 200 miles of an active volcano, or operated within 10 miles of salt water after last flight of the day.

5. Clean engines (WP 1632 00).

**NOTE**

Perform this inspection on volcano system components operated in sand and dust conditions.

6. Perform the following on volcano system components operated in sand and dust conditions:
   a. Check for sand and/or dust in launcher rack connectors, seals and on arming of latching levers. Remove particles with forced air or brush.
   b. Check expando and single acting pins for proper seating and that spring button is out.
   c. Clean sand and/or dust from DCU switches with soft brush or forced air.
   d. Clean sand and/or dust from DCU cover prior to securing to DCU.

**INSPECTION** - Continued

e. Perform preventative maintenance checks and services, refer to TM 9-1095-208-23-2&P.

f. Ensure launcher racks are covered whenever canisters are not installed.

g. Perform complete volcano operational check before any mission (TM 1-1520-237-10).

**END OF WORK PACKAGE**

**UNIT LEVEL**

**AIRCRAFT GENERAL**

**OPERATING HELICOPTER IN HEAVY RAINFALL**

**This WP supersedes WP 1729 00, dated 17 April 2006.**

**INITIAL SETUP:**

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
TM 1-1520-253-13&P
WP 0857 00

---

**INSPECTION 77-27714-96-26722**

## NOTE

Perform this inspection after helicopter has flown in heavy rainfall.

1. Inspect battery vent tubes for collection of water.
2. Inspect battery case for collection of water (WP 0857 00).
3. Remove all water that collected in battery case and battery vent tubes.

**INSPECTION HH-60A HH-60L**

## NOTE

Perform this inspection after helicopter has flown in heavy rainfall.

1. Remove OBOGS concentrator filter (TM 1-1520-253-13&P).
2. Inspect filter bowl for collection of water. Remove all water in filter bowl.
3. Inspect filter bowl for corrosion. **NO CORROSION ALLOWED.** If corrosion is present, replace bowl.
4. Install filter bowl (TM 1-1520-253-13&P).

## OPERATING HELICOPTER IN NUCLEAR OR BIOCHEMICALLY CONTAMINATED ATMOSPHERE

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01

**Material/Parts**
Decontamination Agent

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
FM 3-5, NBC Decontamination

### MAINTENANCE

**NOTE**

- Perform this inspection on volcano system components, which were in sealed containers, while exposed to a nuclear or biochemically contaminated atmosphere. Individual components subjected to a nuclear or biochemically contaminated atmosphere cannot be decontaminated.
- Wear protective NBC gear (MOPP IV) while completing these procedures.

1. Decontaminate each container using soap water and approximately 200 gallons of decontamination agent. Wash containers using sponges and high pressure water.
2. All decontaminate solutions used in these procedures must be disposed of in accordance with FM 3-5, NBC Decontamination.

### PRELIMINARY INSPECTION

**NOTE**

- Following a known or suspected lightning strike, the visual and operational checks listed below must be done before next flight.
- Lightning strike damage can be distinguished from other damage, such as physical gouging, denting, or erosion, because it normally appears as a blackened surface, pit, or hole with a burned rim. Since lightning is attracted to sharp objects, pay close attention to protrusions, sharp corners, outer surfaces such as main and tail rotor blade tips and trailing edges, pitot heads, main and tail landing gear, electrostatic discharger, and antennas.

1. Inspect visible surfaces of main rotor blades and main rotor hub assembly including pitch horns, spindles, hub, dampers, bifilar, main rotor shaft extension, controls, and swashplate assembly for evidence of lightning damage.
2. Inspect visible surfaces of tail rotor blades and tail rotor assembly, including inboard and outboard retention plates, pitch horn, pitch change beam and shaft, and control linkages for evidence of lightning damage.
3. Visually inspect helicopter flight controls for evidence of lightning damage. Check for freedom of movement of all flight controls.
4. Visually inspect entire helicopter surface for arc burns, burn holes, burn runners, paint discoloration, lost or eroded metal, torn metal, bulged or delaminated skin, pits, or punctures, no matter how slight.
5. Visually inspect exposed electrical wiring, including wiring in nose compartment and under main rotor pylon fairing.
6. Inspect all electrical, AFCS, and avionic components, including antennas for damage.
7. Visually inspect gravity refueling ports, pressure refueling port, and fuel cell vent port.
8. Visually inspect APU for damage.
9. If no visible damage is found, do a complete operational check of the electrical, avionics and automatic flight controls systems and all aircraft subsystems with electrical controls and/or wiring; e.g. engine fire detection and extinguishing systems, caution and advisory warning system, and hydraulic system (TM 11-1520-237-23). Include measurement of VSWR on all antenna systems and a check of the magnetic compass accuracy.
10. If no damage was found after completing operational checks, lightning energy level was very low or was a near miss, then no further inspection is required.
11. If any type of damage was found, refer to DAMAGE INSPECTION below. Document fully all damage found and list all components needing replacement. Submit a CAT I deficiency report which includes this information.

### MAIN ROTOR AND FLIGHT CONTROLS

1. Tag all components being sent to depot with ″LIGHTNING STRIKE″.
2. Inspect entire top and bottom length of main rotor blades for the following (WP 0544 00):

**NOTE**

If minor external damage is found, major internal damage may have occurred.

   a. Entire blade length and trailing edge for arc burns, burn holes, burn runners, arcing, paint discoloration, voids, delamination and puncture marks. **NONE ALLOWED.** Return blade to depot if damage is found.

   b. Tip cap, tip cap nickel abrasion strip, tip cap attaching screws, and trailing edge of trim tab for arc burns or discoloration. **NONE ALLOWED.**

**MAIN ROTOR AND FLIGHT CONTROLS** - Continued

c. Ends of blade leading edge nickel abrasion strip or titanium strip for arc burns. **NONE ALLOWED.**

d. Remove one expandable pin at a time from blade and check for discoloration. **NONE ALLOWED.** Replace expandable pin if damage is found. Partially fold blade and check for damage.

3. Remove spindle assembly of damaged blade and send to depot (WP 0551 00). After removal of spindle assembly, inspect the following:

a. Check liner on main rotor hub in spindle attach area for damage and disbonding. **NONE ALLOWED.** If damage or disbonding is found, send hub assembly to depot.

b. Check spindle attachment bolts for damage and discoloration. **NONE ALLOWED.** If damage or discoloration is found, replace spindle attachment bolts.

c. Check outboard damper attaching bolt and upper pitch control rod attaching bolt for damage or discoloration. **NONE ALLOWED.** Replace bolts if damage is found.

d. Disconnect pitch control rod end from swashplate (WP 0563 00). Inspect upper and lower pitch control rod end bearings for arc burns. **NO ARC BURNS ALLOWED.** If arc burns are found, replace control rod.

e. Inspect rotating scissors for damage. **NONE ALLOWED.** If damage is found, replace scissors.

f. Disconnect servo control rods (WP 1120 00, WP 1121 00, or WP 1122 00). Check swashplate for proper rotation and cyclic and collective movement. **REPLACE SWASHPLATE IF ROTATING OR STATIONARY PARTS ARE DAMAGED AND IF PITCH CONTROL ROD OR DAMPER ATTACHING BOLTS WERE DAMAGED.**

g. Inspect entire hub assembly for direct lightning attachment.

4. After main rotor blade lightning strike, remove damper (WP 0558 00). Inspect as follows:

a. Check damper attaching bolts for arcing burns or pitting. **NONE ALLOWED.** If damage is found, replace bolts.

b. Inspect bearings for arc burns or pitting. Fully extend damper control rod and check for arc burns. Check for leaks around indicator and control rods. **NO DAMAGE OR LEAKS ALLOWED.** If damage or leaks are found, send damper to depot.

c. Check damper bracket lugs and bushings for arc burns. **NO ARC BURNS ALLOWED.** If damage is found, send hub assembly to depot.

5. After blade lightning strike, check the following:

a. Check bearings, bushings and attaching bolts on flight control rods, bellcranks, and levers between servo output rods and swashplate for arc burns. **NO ARC BURNS ALLOWED.** Replace parts showing arc burns (WP 0548 00, WP 1103 00 through WP 1117 00).

b. Check forward and aft bellcrank support attaching fittings for arc burns. **NO ARC BURNS ALLOWED.** Replace bellcrank supports if arc burns are found (WP 1132 00).

6. After any lightning strike, check the following:

a. Check primary servo input and output linkage bearings for arc burns. Fully extend pistons and check for roughness, pitting, or arc burns. Check rubber bellows for damage. **NO DAMAGE ALLOWED.** Send servo to depot if damage is found (WP 1091 00).

b. If burn marks were found on input linkage, check mixer, yaw boost servo output rod, pitch/trim output rod, collective boost output rod, roll actuator output rod, yaw boost servo, pitch/trim servo, collective boost servo, and roll actuator for arc burns. **NO ARC BURNS ALLOWED.** If arc burns are found, send servo to depot and replace burned components (WP 1080 00, WP 1083 00, WP 1085 00, and WP 1167 00).

c. Check yaw boost servo input rod, pitch/trim input rod, collective boost input rod, roll actuator input rod, and torque shafts for arc burns. If arc burns are found, check upper cabin control rods, control rods on right and left

**MAIN ROTOR AND FLIGHT CONTROLS** - Continued

sides of cabin, all bellcranks, and control rods in cockpit for arc burns. **NO ARC BURNS ALLOWED.** If arc burns are found, replace damaged components (WP 1094 00, WP 1103 00 through WP 1117 00.

**MAIN TRANSMISSION AND DRIVE SHAFT**

1. Visually inspect main gear box mounting points, attaching bolts, and exposed portion of main rotor shaft for arc burns or leakage. **NO DAMAGE ALLOWED.** If damage is found, remove main transmission and send to depot (WP 0630 00).
2. If any main rotor component shows signs of lightning strike, remove main module and send to depot (WP 0630 00).
3. Visually inspect input drive shafts, gimbals, and support tubes for arc burns or leakage. **NO DAMAGE ALLOWED.** If damage is found, send components to depot (WP 0653 00).

**TAIL ROTOR SYSTEM**

1. Inspect entire inboard and outboard surfaces of tail rotor blades for the following (WP 0545 00):
   a. Entire blade length for arc burns, burn holes, burn runners, paint discoloration, voids, and delaminations.
   b. Blade tip and trailing edge for arc burns, disbonding, and loose rivets in tip cap.
   c. Leading edge abrasion strip and skin-to-horn joint for arc burns.
   d. Pull boot from horn and check spar and pivot bearing for arc burns.
   e. **NO DAMAGE ALLOWED.**
2. If damage was found, do this:
   a. Remove outboard retention plate and outboard tail rotor blade (WP 0585 00). Check spar retention plate area for fuzzy appearance and/or loose fibers. **NO DAMAGE ALLOWED.** If damage is found, return blade to depot.
   b. Check pitch control rod end bearings, pitch change beam clevis ends and inside taper, and outboard retention plate corners for damage. **NO DAMAGE ALLOWED.** If damage is found, return components to depot.
   c. Check pitch control rod and retention plate attaching bolts for damage. **NO DAMAGE ALLOWED.** Replace damaged bolts.
   d. Check inboard retention plate (paying particular attention to corners) for damage. **NO DAMAGE ALLOWED.** If damage is found, send plate to depot.

**MAIN LANDING GEAR**

1. Check strut lower stage piston, axle, drag beam, and attaching parts of main landing gear for damage. Check landing gear dimension for proper servicing and leaks (WP 1597 00).
2. If damage was found, remove landing gear (WP 0438 00 and WP 0444 00 00) and do the following:
   a. Check drag beam attaching bolt and pivot pins for arc burns. **NO ARC BURNS ALLOWED.** Replace if arc burns are found.
   b. Check ground wire (left side only) and bonding jumper from fuselage to drag beam for damage. **NO DAMAGE ALLOWED.** If damaged, replace components.
   c. Fully extend lower stage shock strut and check for pitting and roughness on chrome plated surface. **NONE ALLOWED.** If pitting or roughness is found, send shock strut to depot.

**TAIL LANDING GEAR**

1. Check tail landing gear for damage, proper servicing dimension, and leaks (WP 1599 00).

**TAIL LANDING GEAR** - Continued

2. If damage was found, remove tail landing gear (WP 0459 00 and WP 0462 00 00) and do the following:
   a. Check yoke and landing gear shock strut attaching bolts for arc burns. **NO ARC BURNS ALLOWED.** If arc burns are found, replace bolts.
   b. Check inside diameter of bushings in yoke for arc burns. **NO ARC BURNS ALLOWED.** If arc burns are found replace bushings.
   c. Check bearings in shock strut for arc burns. **NO ARCING ALLOWED.** If arc burns are found, send shock strut to depot.
   d. Fully extend lower stage shock strut and check for pitting and roughness on chrome plated surface. **NONE ALLOWED.** If pitting or roughness is found, send shock strut to depot.

## TAIL ROTOR PYLON

1. Check surface of tail rotor pylon, pylon fold joint, stabilator, and electrostatic dischargers for lightning passage.
2. If damage was found, do the following:

### NOTE

Refer to WP 0186 00 and WP 0187 00 for maintenance procedures.

   a. Remove stabilator and inspect attaching bolts, bearings, attachment fittings, actuator attaching bolts, and bearings for damage. **NONE ALLOWED.** If damage is found, send stabilator to depot. Replace attaching hardware.
   b. Check stabilator attachment fittings, bearings, bushings, and stabilator actuator attachment bearing and fitting on tail pylon for arc burns. **NO ARC BURNS ALLOWED.** If damage is found on stabilator attachment fitting or actuator fitting, send stabilator and tail rotor pylon to depot.
   c. Fold tail rotor pylon (WP 1681 00 00) and check fold joint, attaching bolts, surface of joints, shearpins, barrelnuts, and hinge fittings on tail rotor pylon for arc burns. **NO ARC BURNS ALLOWED.** If arc burns are found, replace attaching hardware and send pylon to depot.
   d. Check hinge fittings on tailcone for arc burns. **NO ARC BURNS ALLOWED.**
   e. Remove tail rotor and intermediate gear box fairings. Check tail rotor control cables for blown plastic covering. **NO DAMAGE ALLOWED.** If damage is found, check all sections of cable and replace any damaged section.

## INTERMEDIATE GEAR BOX, TAIL GEAR BOX, AND DRIVE SHAFT

### NOTE

Refer to WP 0659 00, WP 0675 00, and WP 0681 00 for maintenance procedures.

1. Visually inspect intermediate and tail gear box mounting points and attaching hardware for arc burns or leakage. **NO DAMAGE ALLOWED.** If damage is found, remove gear box and send to depot. Replace attaching hardware.
2. If no visual damage was found on intermediate gear box, but any one of the couplings, viscous damper bearings, hardware, or shafts adjacent to gear box are damaged, remove intermediate gear box and send to depot.
3. Inspect tail drive shafts, couplings, and viscous damper bearings for arc burns or leakage. **NO DAMAGE ALLOWED.** If damage is found, remove component and send to depot.
4. If no visual damage was found on tail rotor gear box, but there was evidence of a lightning strike on tail rotor, remove tail gear box and servo and send to depot.

## OIL COOLER

### NOTE

Refer to WP 0675 00 and WP 0678 00 for maintenance procedures.

Visually inspect oil cooler for arc burns or leaking. **NO DAMAGE ALLOWED.** If damage is found, remove oil cooler fan and send to depot.

## ENGINE

### NOTE

Refer to WP 0485 00 and WP 0486 00 for maintenance procedures.

1. Visually inspect engine compartment, output drive shaft, and engine mounting points for signs of arc burns. **NO ARC BURNS ALLOWED.** If damage is found, replace damaged components.
2. Inspect engines (TM 1-2840-248-23).
3. If no visual damage is found, do an operational check (WP 0072 00).

## APU

Visually inspect APU for damage. **NO DAMAGE ALLOWED.** If damage is found, remove APU (WP 1359 00). Send APU to depot. If no damage is found, do an operational check (WP 0155 00 and WP 0156 00).

## ELECTRICAL/AVIONICS

Visually inspect electrical AFCS (WP 0028 00) and avionic components (TM 11-1520-237-23) for damage. **NO DAMAGE ALLOWED.** Remove and bench check components that are damaged. Replace all damaged components found during bench test or inspection.

## FUEL SYSTEM

1. Visually inspect exposed electrical wiring, including wiring in nose compartment, and under main rotor pylon, for burns or charring. **NONE ALLOWED.** Repair or replace damaged wiring (TM 1-1500-204-23).
2. Visually inspect gravity refueling ports, pressure refuel port, and fuel cell vent port for arc burns. **NO ARC BURNS ALLOWED.** Replace any damaged component. During next refueling, check pressure refuel/defuel high-level shutoff valves and vent valve for proper operation (WP 0130 00).

## EXTERNAL FUEL TANK

1. Inspect refueling port, air, fuel, and electrical interfaces for arc burns.
2. Inspect for any indication of damage to composite structure (WP 1482 00).
3. **IF THE DAMAGE EXCEEDS MAXIMUM ALLOWABLE TOLERANCES, THE TANK MUST BE RETURNED TO THE CONTRACTOR.**

WP 0551 00

### MAIN ROTOR BLADES SUDDEN STOPPAGE

**NOTE**

The following inspections are required whenever a blade is damaged by striking an object.

1. If damage to blades is less than the accept/reject criteria, repair blades and return to service (WP 0544 00).
2. Inspect droop stop ears for cracks. If ear is cracked, replace spindle. Tag removed spindle ″DAMAGE OCCURRED DUE TO EXCESSIVE BLADE FLAPPING″.
3. If damage to blades includes severing blades inboard of tip cap, remove transmission and rotor head assembly and send to overhaul facility. Clearly tag all components ″BLADE DAMAGE OCCURRED WHILE ROTOR HEAD IN MOTION″. Also explain what the blades hit, if known, and how badly helicopter parts were damaged.
4. If damage to blades is greater than main rotor blade accept/reject criteria (WP 0544 00) and includes damage to primary structural components (cuff, spacer assembly, and spar assembly), do this:
   a. Remove blades and spindles and send to overhaul facility. Clearly tag all components ″BLADE DAMAGE OCCURRED WHILE ROTOR HEAD IN MOTION″. Also explain what the blades hit, if known, and how badly helicopter parts were damaged.
   b. Inspect elastomeric bearings for damage (WP 0551 00).
   c. Inspect blade attachment lugs and damper lugs on spindle for damage. Crazing of paint on lugs is evidence of damage.
   d. Inspect hub arm ID (4 places) for damage caused by elastomeric bearing contact.
   e. Inspect dampers, control horns, pitch control rods, rotating swashplate and swashplate scissors for damage.
   f. Inspect airframe attachment points for deformation and damage.
   g. Visually inspect input drive shafts, tail drive shafts, oil cooler shaft area, all associated flexible couplings, bearings, and supports for cracks and distortion.
5. If damage to blades is greater than main rotor accept/reject criteria (WP 0544 00) but damage is limited to pocket skin assembly, trim tab, abrasion strip, and balance block and does not include damage to primary structural components, remove blades and send to approved overhaul facility. Clearly tag all components ″BLADE DAMAGE OCCURRED WHILE ROTOR HEAD IN MOTION″. Also explain what blades hit, if known, and how badly helicopter parts were damaged.

## MAIN ROTOR BLADES SUDDEN STOPPAGE - Continued

6. If damage to tip cap is greater than tip cap accept/reject criteria (WP 0544 00), remove tip cap and inspect adjacent blade structure (tip block, Rosan insets, tip weights, weight studs, tip rib and skin adjacent tip rib) for damage. Disposition of blade shall be based on repairability of these components.
7. Perform sudden stoppage inspection for engines (TM 1-2840-248-23).

## TAIL ROTOR BLADES SUDDEN STOPPAGE

### NOTE

The following inspections are required whenever a blade is damaged by striking an object.

1. If damage to blades is less than tail rotor blade accept/reject criteria (WP 0546 00) do this:
   a. Inspect all four tail gear box mounting lugs.
   b. Visually inspect intermediate gear box mounting, all drive shaftings, flexible couplings, drive shaft bearings, oil cooler axial fan, and drive shaft supports for cracks and distortion.
   c. Perform oil cooler spline wear inspection.
   d. Repair tail rotor blade (WP 0546 00).
2. If damage to blades is greater than tail rotor blade accept/reject criteria (WP 0546 00) and includes damage to spar and/or severing blade inboard of tip weights, dents or gouges in leading edge over 1/4-inch deep in either polyurethane or nickel abrasion strips, or damage to attachment block, do this:
   a. Remove pitch beam, pitch change links, blades, retention plates, tail gear box, intermediate gear box, oil cooler axial fan, and all tail drive shaft assemblies from helicopter and send with all attaching hardware to overhaul facility for detail inspection and overhaul. Clearly tag all components ″DAMAGE OCCURRED WHILE TAIL ROTOR IN MOTION″. Also explain what the blades hit, if known, and how badly the helicopter parts were damaged.
   b. Visually inspect tail pylon for possible structural damage such as loose rivets, cracks, etc. Inspect gear box attachment points for deformation and other signs of damage.
3. If damage to blades is greater than tail rotor blade accept/reject criteria (WP 0546 00) but is limited to damage to tip weights or tip block studs, and/or skin and honeycomb in Region A, Region B, or Region C, do this:
   a. Inspect all four tail gear box mounting lugs.
   b. Visually inspect intermediate gear box mounting, all drive shafting, flexible couplings, drive shaft bearings, oil cooler axial fan, and drive shaft supports for cracks and distortion.
   c. Perform oil cooler spline wear inspection.
   d. Remove blades from helicopter and send to overhaul facility. Clearly tag all components ″DAMAGE OCCURRED WHILE TAIL ROTOR IN MOTION″. Also explain what blades hit, if known, and how badly helicopter parts were damaged.
4. Perform sudden stoppage inspection for engines (TM 1-2840-248-23).

## TAIL ROTOR OUT OF BALANCE - LOSS OF MATERIAL

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
Torque Wrench, 30 - 200 in. lbs

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 0681 00
WP 1681 00

### INSPECTION

**NOTE**

Loss of material may be the result of lightning strike, ballistic damage or loss of rotor heater mat/abrasion strip.

1. If tail rotor becomes unbalanced causing severe vibration through loss of material or loosening of rotor plug (centering bushing), or inboard boot support touches outboard retention plate, do inspections as follows:
   a. Check torque on nuts and studs that hold both sections of tail rotor gear box together. Do not loosen nuts before checking torque. **TORQUE MUST BE 171 - 189 INCH-POUNDS.** Replace gear box if torque is below minimum.
   b. Check tail rotor gear box mounting bolts for torque (WP 0681 00).
   c. Visually inspect tail rotor gear box fitting inside and outside. Remove drive shaft to get through access hole. Carefully examine airframe for cracks.
   d. Inspect both sides of tailcone and pylon hinge fittings. Fold pylon (WP 1681 00) to examine inside surfaces for cracks.
   e. Inspect stringers near barrel-nuts for cracks.
   f. Inspect intermediate gear box mounting fitting for cracks.

### UP TO 126% NR

No special inspection required.

### ABOVE 126% NR

1. Inspect main rotor blade tip caps for security, cracks, bond separations, elongation of holes, erosion, or other damage.
2. Inspect main rotor blade cover skins for cracks, bond separations, crazing of paint, erosion, or other damage. Pay close attention to area around tip rib for above conditions.
3. Inspect main rotor blade root laminated areas for cracks, bond separations, delamination of plies, and crazing of paint at bond interface with blade skin.
4. Inspect main rotor blade cuffs and attaching hardware for signs of movement from attaching hardware. Check sealing compound around boltheads for damage.
5. Test main rotor blade pressure indicator (WP 1624 00). Check indicator for damage and security.
6. Inspect main rotor head elastomeric bearings, spindle modules, hub, and bifilar for general condition.
7. Inspect tail rotor blades for signs of cracks, bond separations, crazing, or skin delaminations.
8. Inspect tail rotor blade from mid-span to control horn for bond separations and delaminations of trailing edge skins. Check areas between control horn and trailing edge skins for above condition.
9. Remove tail rotor boots and inspect for security of pivot retainer (WP 0588 00). Check boot support for above condition.
10. Inspect engine drive shaft assemblies for loose fasteners and for yielding flexible couplings.
11. Inspect ends of tail drive shaft sections for signs of yielding, indicated by loose lockbolts, elongated lockbolt holes, and paint flaking near or between lockbolts.
12. Inspect flexible couplings for yielding, and for distortion of segments.
13. Inspect drive shaft tubes for any signs of bending.
14. **CONTACT UH-60 SYSTEMS ENGINERING, AMCOM, FOR POSSIBILITY OF ADDITIONAL INSPECTIONS AND/OR REMOVALS.**

### INSPECTION

1. **MAIN TRANSMISSION OIL TEMPERATURE MUST NOT EXCEED 284°F(140°C), OR MUST NOT BE BETWEEN 248°F(120°C) and 284°F(140°C) FOR OVER 60 MINUTES.** If oil temperature exceeds limits, do this:

   a. Inspect oil cooler, lines, and interior of duct for blockage and debris. Remove any blockage or debris (Figure 1).

   b. Replace all five main transmission modules.

2. If main transmission oil temperature exceeds 248°F(120°C) and main transmission oil temperature caution light is illuminated, do this:

   a. Inspect oil cooler, lines, and interior of duct for blockage and debris. Remove any blockage or debris.

   b. Replace all five main transmission modules (WP 0630 00).

3. If main transmission oil temperature is in precautionary range 221°F(105°C) to 284°F(140°C) for less than 60 minutes, and aircraft is not in a prolonged hover in hot weather conditions above 95°F(35°C), and MAIN XMSN OIL TEMP caution light did not illuminate, do this:

   a. Inspect generator drive spline adapters. **REPLACE WORN, DISCOLORED, OR CRACKED SPLINE ADAPTERS.**

   b. Drain main gear box oil (WP 0630 00).

   c. Remove both input module chip detectors and strainer assemblies. Using borescope with light source, inspect both strainer sleeves for blockage of the core hole oil passage in the sump housing. If blockage exists, measure amount chip detector sleeve overlaps core hole oil passage. **MAX OVERLAP 0.030-INCH (WP 0617 00).**

   d. Using borescope with light source, inspect core hole oil passage between input module chip detectors and pumps for blockage (Figure 2). **NO BLOCKAGE ALLOWED.** If blockage is found, replace main module (WP 0630 00).

   e. Remove oil pumps (WP 0648 00).

   f. Check for damaged packings. Replace damaged packings.

**INSPECTION** - Continued

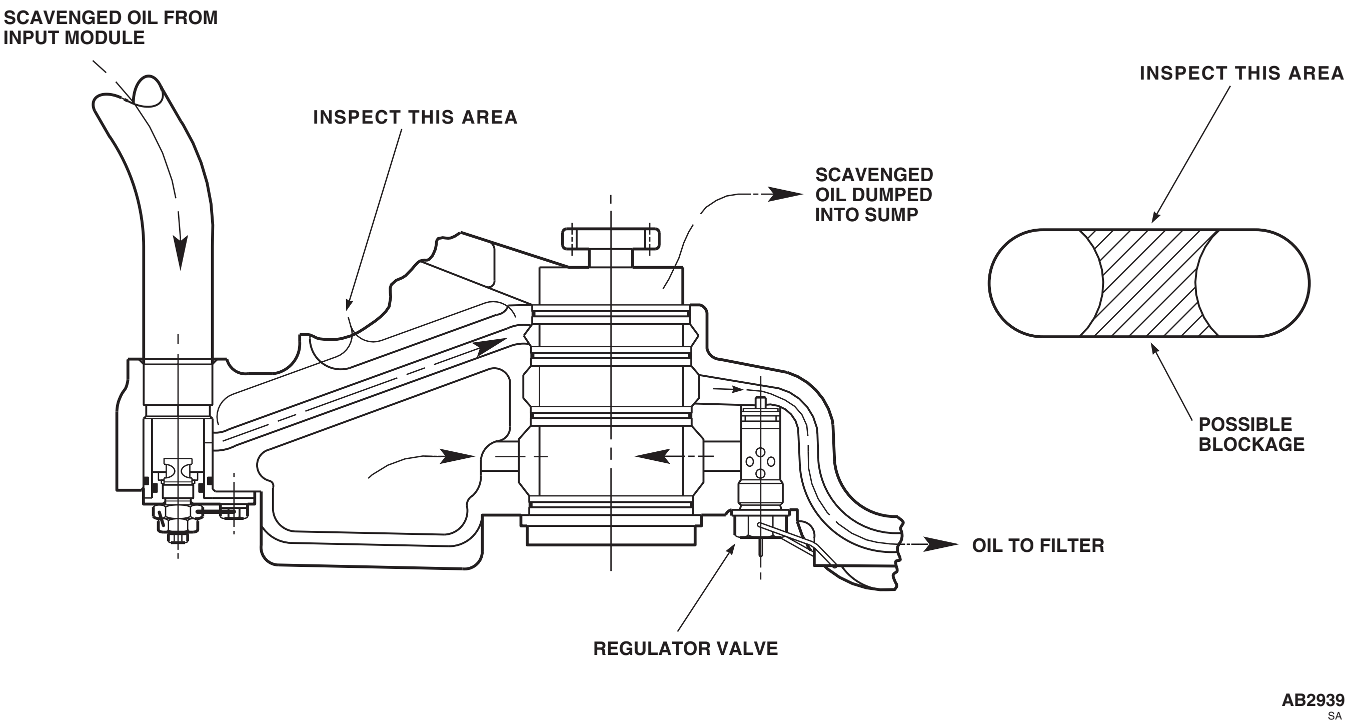

Figure 1. Transmission Core Hole Inspection.

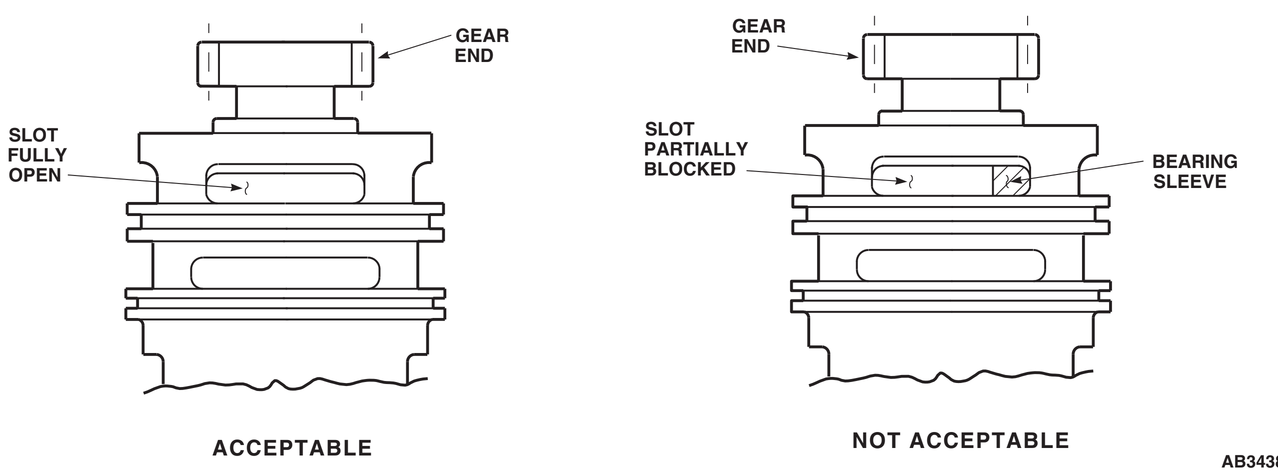

Figure 2. Transmission Bearing Sleeve Inspection.

## NOTE

Bearing sleeve is bronze in color.

g. Check both upper slots to ensure bearing sleeve has not rotated and caused partial blockage. **NO BLOCKAGE ALLOWED.** If blockage is found, replace oil pump (WP 0648 00).

**INSPECTION** - Continued

h. If no cause for overtemp can be found, perform a serviceability check. Inspect all strainers, chip detectors, and oil filters. If no problems are found, return aircraft to service. If problem persists, contact AMCOM Engineering for instructions.

4. If main transmission oil temperature was between 221°F(105°C) and 248°F(120°C), do this:

a. Inspect oil cooler, lines and interior of duct for blockage and debris. Remove blockage and debris.

b. Inspect input module drain tubes for blockage and debris. Remove blockage and debris.

c. Inspect generator drive spline adapters. **REPLACE WORN, DISCOLORED, OR CRACKED SPLINE ADAPTERS.**

d. Drain main gear box oil (WP 0630 00).

e. Remove both input module chip detectors and strainer assemblies (WP 0617 00). Using borescope with light source, inspect both strainer sleeves for blockage of the core hole oil passage in the sump housing. If blockage exists, measure amount chip detector sleeve overlaps core hole oil passage. **CHIP DETECTOR SLEEVE SHALL NOT OVERLAP CORE HOLE OIL PASSAGE BY MORE THAN 0.030-INCH.**

f. Using borescope with light source, inspect core hole oil passage between input module chip detectors and pumps for blockage. **NO BLOCKAGE ALLOWED.** If blockage is found, replace main module (WP 0630 00).

g. Remove oil pumps (WP 0630 00).

h. Check for damaged packings. Replace damaged packings.

**NOTE**

Bearing sleeve is bronze in color.

i. Check both upper slots to ensure bearing sleeve has not rotated and caused partial blockage (Figure 2). **NO BLOCKAGE ALLOWED.** If blockage is found, replace oil pump (WP 0648 00).

j. If no cause for overtemp can be found, perform a serviceability check. Inspect all strainers, chip detectors, and oil filters. If no problems are found, return aircraft to service. If problem persists, contact AMCOM Engineering for instructions.

### INSPECTION

**NOTE**

Prior to replacing any component, do an operational check of the oil temperature indicating system (WP 0085 00).

1. **MAIN TRANSMISSION OIL TEMPERATURE MUST NOT EXCEED 284°F (140°C), OR MUST NOT REMAIN IN PRECAUTIONARY RANGE 191°F (105°C) AND 284°F (140°C) FOR LONGER THAN 60 MINUTES.** If oil temperature exceeds limits, do this:
   a. Inspect oil cooler, lines, and interior of duct for blockage and debris. Remove any blockage or debris.
   b. Replace all five main transmission modules (WP 0630 00).
2. If main transmission oil temperature is in precautionary range 191°F (105°C) to 284°F (140°C) for less than 60 minutes, and aircraft is not in a prolonged hover in hot weather conditions above 95°F (35°C), do this:
   a. Remove oil return tubes from input modules and main transmission sump (WP 0653 00).
   b. Inspect tubes for blockage or debris. **NONE ALLOWED.** Remove blockage and debris.
   c. Inspect oil cooler, lines, and interior of duct for blockage and debris. Remove any blockage or debris.
   d. Inspect generator drive spline adapters. **REPLACE WORN, DISCOLORED, OR CRACKED SPLINE ADAPTERS.**
   e. If no cause for overtemp can be found, perform a serviceability check. Inspect all strainers, chip detectors, and oil filters. If no problems are found, return aircraft to service. If problem persists, contact AMCOM Engineering for instructions.

## 107% TO 127%, MORE THAN 10 SECONDS, BOTH ENGINES OPERATING

Do a serviceability check on main transmission whenever transient torque readings are between 107% to 127% for more than 10 seconds (WP 0616 00).

## 121% TO 127%, MORE THAN 10 SECONDS, ONE ENGINE OPERATING

Do a serviceability check on main transmission whenever transient torque readings are between 121% to 127% for more than 10 seconds (WP 0616 00).

## 127% TO 144%, MORE THAN 10 SECONDS, ONE OR BOTH ENGINES OPERATING

1. Replace main module whenever transient torque readings are between 127% to 144% for more than 10 seconds (WP 0630 00).
2. Visually inspect input shafts and flexible couplings for cracks or buckling whenever transient torque readings are between 127% to 144% for more than 10 seconds. **A GAP OF NO MORE THAN 0.030-INCH BETWEEN COUPLING LAMINATIONS IS ACCEPTABLE.**
3. Perform engine output shaft vibration level check on No. 1 and No. 2 engines (TM 1-6625-724-13&P).

## 144%, ONE OR BOTH ENGINES OPERATING

Remove main transmission and input shafting from helicopter and send to overhaul facility whenever transient torque readings go above 144% regardless of time. Accessory modules do not have to be replaced. Tag components stating reason for removal. Record amount of overtorque on tag.

## INSPECT TURRET FLIR UNIT (TFU) SCAN CAVITY (BIT/FIT INDICATION) HH-60A HH-60L

**This WP supersedes WP 1740 00, dated 17 April 2006.**

### INITIAL SETUP:

**Tools and Special Tools**
Aircraft Mechanic's Toolkit, 5180-99-B01
FLIR Ground Support Kit, PN 7500209-2

**Personnel Required**
UH-60 Helicopter Repairer MOS 15T (1)

**References**
WP 1628 00

### INSPECT

## NOTE

Because of the high speed at which the scanning motor operates, the motor and horizontal scan mirror operates within an evacuated cavity. The vacuum in the scan motor cavity is not permanently sealed and must be checked to make sure that it remains within specifications. The vacuum should be checked on initial set-up and installation of the system and whenever BIT/FIT indicates a problem with the scan cavity.

1. If turret FLIR unit (TFU) is not in the stowed position, do the following:
   a. Turn on electrical power.
   b. On FLIR control panel, set POWER switch to ON.
   c. On FLIR control panel, set menu control to STOW.
   d. On FLIR control panel, set POWER switch to OFF.
   e. Turn off all electrical power.
2. Turn system off and allow system to cool for one hour.
3. Using spanner pin wrench, remove vacuum port cover from TFU.
4. Using vacuum test cable, connect vacuum gage to TFU (Figure 1).
5. Press and hold the READ VACUUM button on the vacuum gage until the needle on the gage stabilizes.

**INSPECT** - Continued

## CAUTION

If the vacuum gage indicates a pressure greater than 8.0 mm of mercury, do not operate the thermal imager. Excessive heat and reduced motor life may occur.

## NOTE

The vacuum specification for the scan cavity is 0.2 to 8.0 mm of mercury. Generally the scan cavity will not require service as long as a vacuum test shows that the vacuum does not exceed 8.0 mm. Due to environmental factors, the frequency at which the scan cavity requires service can vary. Systems that are used continuously or in a hot environment will require more frequent servicing. Normally, a system should not require evacuation more than once every three to six months. A system that requires evacuation on a weekly basis has poor vacuum integrity and should be returned to the manufacturer for repair.

6. Read the pressure indicated on the vacuum gage. If scan cavity vacuum pressure is greater than 8.0 mm of mercury, do FLIR scan cavity evacuation (WP 1628 00).
7. Disconnect vacuum test cable from TFU (Figure 1).
8. **QA** Install vacuum port cover on TFU and snug with spanner pin wrench.

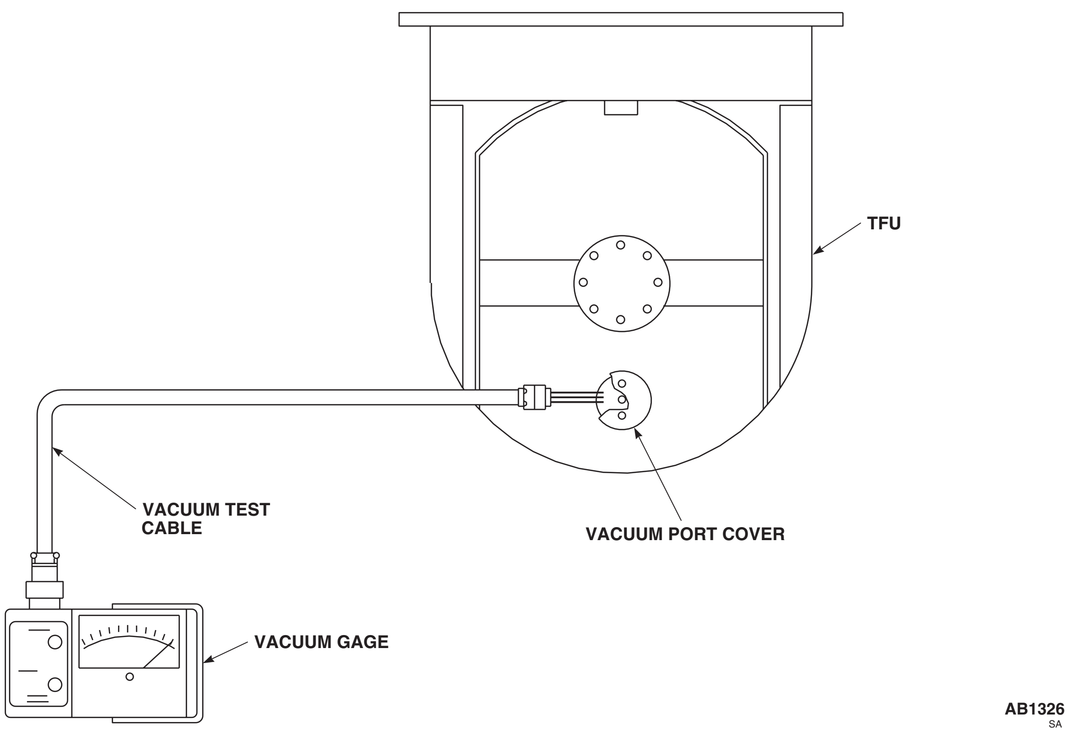

Figure 1. Connect Vacuum Gage to TFU.

**END OF WORK PACKAGE**

## AIRCRAFT GENERAL

## RETIREMENT SCHEDULE

**This WP supersedes WP 1741 00, dated 15 December 2007.**

### INITIAL SETUP:

**References**
TM 9-1377-200-20

### CALENDAR RETIREMENT

The calendar retirement schedule, Table 1, lists units of operating equipment that are to be retired at the period specified.

#### NOTE

- Installed life is the period of time a cartridge activated device (CAD) is allowed to be used after its hermetically-sealed container is opened; however, the installed life expiration date shall never exceed the shelf life expiration date. The installed life expiration date is computed from the date the hermetically-sealed container is open and is always computed to the last day of the month involved.
- Refer to TM 9-1377-200-20 for service life extension.

### RETIREMENT SCHEDULE DEFINITION

The operating time or calendar interval specified for removal, condemnation, and disposal of parts.

#### NOTE

Items replaced on a calendar basis (for the purpose of overhaul or retirement) shall not be listed on DA Form 2408-16. Component Installation and Removal Record, but shall be listed on DA Form 2408-18, Equipment Inspection List, for scheduling purposes.

**Table 1. Calendar Retirement Schedule.**

| PART NO. | NOMENCLATURE | SHELF LIFE (YRS) | INSTALLED LIFE (MO) |
|---|---|---|---|
| MARK 44 MOD 0, 1377-M514 (Note 6, 7) | Cable Cutter Cartridge | 15 | 72 |
| 1377-MU02 (Note 4) | Rescue Hoist Refire Kit | 12 | 48 |
| 1377-MU34 (Note 3) | Cutter Actuator Cartridge | 12 | 48 |
| 1512AS105 | Fire Extinguisher (HTL) Cartridge | 16 | 84 |
| 1512AS121 | Cargo Hook Cartridge | 15 | 156 |

**RETIREMENT SCHEDULE DEFINITION** - Continued

**Table 1. Calendar Retirement Schedule. - Continued**

| PART NO. | NOMENCLATURE | SHELF LIFE (YRS) | INSTALLED LIFE (MO) |

**NOTES**

1. The shelf and installed lives listed in this table are for reference only. TB 9-1300-385, Appendix D is the source document for these lives.

**RETIREMENT SCHEDULE DEFINITION** - Continued

**Table 1. Calendar Retirement Schedule. - Continued**

| PART NO. | NOMENCLATURE | SHELF LIFE (YRS) | INSTALLED LIFE (MO) |
|---|---|---|---|
| 2. Shelf life is the maximum calendar time a cartridge can reach before it must be retired, whether installed or not. | | | |
| 3. The rescue hoist cutter actuator cartridge must be replaced when the calendar life has been reached. | | | |
| 4. The refire kit for the rescue hoist consists of the cartridge, shear pin, anvil, cutter, and packings. All of these items must be replaced whenever the cartridge has been fired. | | | |
| 5. Age life retired cartridges shall be returned to the supporting ammunition supply activity in the container used to transport the replacement cartridge. | | | |
| 6. Unserviceable cartridges shall be tagged with the reason for removal, installation date, lot number, helicopter serial number and aviation unit designation. | | | |
| 7. HH-60A/L | | | |
| 8. Combination of shelf life and installed life of airbag modules must not exceed a total of 10 years. | | | |
| 9. O-Ring(s) affected are located inside the main fuel cells only. | | | |

**END OF WORK PACKAGE**

## UNIT LEVEL

## AIRCRAFT GENERAL

## LIFE LIMITED COMPONENTS

**This WP supersedes WP 1742 00, dated 15 December 2007.**

### INITIAL SETUP:

**References**
TM 1-1500-328-23
TM 1-2840-248-23
TM 55-2835-208-23
TM 55-2835-209-23

### GENERAL

#### NOTE

- All retirement life items will be mutilated in accordance with TM 1-1500-328-23, Aeronautical Equipment Maintenance Policies and Procedures.
- Record keeping is now required for the Tail Rotor Pitch Change Shaft, 70400-06100-042. If time since installation is not known, time should be estimated to be same as total helicopter flight hours. Units with helicopters above 2,160 flight hours will order shaft and replace it when delivered or at next phase, whichever comes first. Helicopters below 2,160 flight hours will replace shaft when required for its 2,160 flight hour overhaul. The Tail Rotor Pitch Change Shaft Bearings are not accessible at AVUM level. The serial number for the Pitch Change Shaft is located on the shaft next to shoulder for the large diameter (example A233-XXXX).

For engine component retirement times, refer to TM 1-2840-248-23. For APU component retirement times, refer to TM 55-2835-208-23 or TM 55-2835-209-23.

### OVERHAUL INTERVAL DEFINITION

The maximum authorized operating time or calendar interval of parts before removal for overhaul at the category of maintenance authorized in the maintenance allocation chart. Removal of equipment for overhaul may be done at the inspection nearest the time when overhaul is due unless otherwise specified in TM 1-1500-328-23. All other components are on an ″ON CONDITION″ schedule.

### OVERHAUL/RETIREMENT INTERVAL

Table 1 identifies the maximum service life or overhaul interval of dynamically-loaded major components.

**Table 1. Overhaul/Retirement.**

| PART NO. | COMPONENT | OVERHAUL/ RETIREMENT | NOTES |
|---|---|---|---|
| JAM9110PPVM-101 | Oil Cooler Viscous Damper Bearing, STA 410.5 | /720(500) | 18, 26 |

**OVERHAUL/RETIREMENT INTERVAL** - Continued

| 70351-08175-045 | Planetary Carrier | ---/3700 | 7 |

**NOTES:**

1. Item not to be used.

2. The part number is inside the tip cap. Tip cap, 70150-09107-041, versus tip cap, 70150-09107-049, can be identified by the rivet line running chordwise, 5.69 inches from the inboard edge on the top side of the tip cap. Tip cap, 70150-09107-041, has 11 rivets in this line whereas tip cap, 70150-09107-049, has 12 rivets in line. Also, tip cap, 70150-09107-049, has two additional rivets about 3/4-inches inboard of the rivet line on the forward portion of the tip cap.

3. Helicopters with these serial numbers, UH-60A 77-22715, UH-60A 77-22718 - UH-60A 81-23647, UH-60A 82-23660 - subsequent, UH-60L, and EH-60A may have one of these servo beam fitting assemblies installed on helicopter.

4. Horn attachment bolts, 70102-08117-101 or 70102-08117-102, are one time use hardware. They are to be replaced with new bolts whenever the pitch control horn is removed.

5. This main rotor spindle Assembly part number includes the bearing Assembly.

6. The retirement time of the main rotor shaft reverts to 1,080 hours for any of the following conditions:

a. If any type external load is attached to external stores support systems aircraft hard points.

b. If operated over gross weight of 22,000 pounds.

c. The main rotor shaft has a letter ″e″ following the serial number.

d. Installed in one of the following transmissions previously exposed to ESSS, ERFS, Volcano, etc:, A265-00027, A265-00055, A265-0073, A265-00398, A265-00455, A265-00546, A265-00627, A265-00631, A265-00704, A265-00725, A265-00729, A265-00813, A265-00835, A265-00837, A265-00844, A265-00878, A265-00912, A265-00935, A265-00946, A265-00947, A265-00964, A265-00998, A265-01108, A265-01109, A265-01123, A265-01222, A265-01224, A265-01348, A265-01372.

7. The overhaul/replacement due time of the main transmission module should be tracked on DA Form 2408-16, Block 6K, based upon the lowest remaining life on an item installed within the particular transmission. This time is limited by either the main rotor shaft, main transmission case, dowel pins, or planetary carrier Assembly.

8. APU operating hours and APU starts will be tracked on the helicopter's DA Form 2408-13, Block 7 . A start is defined as lighting the ″APU on″ advisory segment or as identified on the APU hour/start meter. this life is a maximum allowable operating time (MAOT) since last turbine wheel replacement.

9. Tail pylon fittings are identifiable by the material thickness of the attach lug at each of the four corners. Fitting, 70209-06051-042, is 0.160-inch thick and fitting, 70209-06051-043, has a step thickness increase to 0.300-inch thick one inch from the aft end.

**OVERHAUL/RETIREMENT INTERVAL** - Continued

### Table 1. Overhaul/Retirement. - Continued

| PART NO. | COMPONENT | OVERHAUL/ RETIREMENT | NOTES |
|---|---|---|---|

10. Main rotor control horns serial numbers 32479930 through 324791859 with CAGE number 60078 are restricted to a retirement life of 1,300 hours.

11. Dowel pins are restricted to one time use only and shall be discarded when the gearbox housing reaches the retirement life. Dowel pins installed in main gear box housings, 70351-08110-044 and 70351-08110-045, are restricted to a retirement life of 4,320 hours. Dowel pins installed in main gear box housing, 70351-38110-041 through 70351-38110-045, are restricted to a retirement life of 20,000 hours.

12. The serial numbered oil cooler axial fan assemblies listed below are restricted to an overhaul time of 1,000 hours unless the serial number has an ″h″ at the end to signify the shaft has been replaced. B512-00356, B512-00357, B512-00358, B512-00360, B512-00361, B512-00362, B512-00363, B512-00364, B512-00365, B512-00366, B512-00367, B512-00368, B512-00369, B512-00370, B512-00372, B512-00373, B512-00374, B512-00375, B512-00376, B512-00377, B512-00378, B512-00379, B512-00380, B512-00381, B512-00382, B512-00383, B512-00384, B512-00385, B512-00386, B512-00387, B512-00388, B512-00389, B512-00390, B512-00391, B512-00392, B512-00393, B512-00394, B512-00395, B512-00396, B512-00397, B512-00399, B512-004, B512-00400, B512-00401, B512-00402, B512-00403, B512-00404, B512-00405, B512-00406, B512-00407, B512-00408, B512-00409, B512-00410, B512-00411, B512-00412, B512-00413, B512-00414, B512-00415, B512-00416, B512-00417, B512-00418, B512-00419, B512-00420, B512-00421, B512-00422, B512-00423, B512-00424, B512-00425, B512-00426, B512-00427, B512-00428, B512-00429, B512-00430, B512-00431, B512-00432, B512-00433, B512-00434, B512-00435, B512-00436, B512-00437, B512-00438, B512-00439, B512-00440, B512-00441, B512-00442, B512-00443, B512-00444, B512-00445, B512-00446, B512-00447, B512-00448, B512-00449, B512-00450, B512-00451, B512-00452, B512-00453, B512-00454, 04890853, 04890854, 04890857, 04890860, 05890641, 05890643, 05890644, 05890645, 05890646, 05890647, 05890649, 05890650, 05890651, 05890653, 05890654, 05890655, 05890656, 05890657, 08890156, 08890157, 08890158, 08890159, 08890160, 08890161, 08890162, 08890163, 08890164, 08890165, 08890166, 08890167, 08890168, 08890169, 08890170, 08890171, 08890172, 08890173, 0889017, 08890175, 08890430, 08890431, 08890432, 08890433, 08890434, 08890435, 08890436, 08890437, 08890438, 08890439, 08890440, 08890441, 08890442, 08890443, 08890444, 08890445, 08890446, 08890447, 08890448, 08890449

13. Oil cooler axial fan Assembly serial number, 04890856, is prohibited from use and must be removed from the helicopter immediately.

14. Main rotor blade cuffs with six lugs, 70150-09109-041, have a retirement life of 5,000 flight hours. Main rotor blades cuffs with eight lugs have a retirement life of 1,900 hours.

15. The overhaul/replacement due time of the tail rotor gear box should be tracked on DA Form 2408-16, Block 6K, based upon the remaining life of the output bevel gear and shaft, 70358-06620-101 and -102, installed within the particular gear box.

16. These bolts are to be replaced every 5,000 airframe hours at the nearest 720-hour (PMI-2) periodic inspection on either side of 5,000 hours.

17. Track replacement due time of bolt on DA Form 2408-18.

18. These bearings will be replaced with the new bearings during 720 hour periodic inspection intervals as specified.

19. Replace bearing during every third periodic inspection, to agree with 2,160, 4,320, 6,480, airframe hours. If the aircraft has past 2,000 airframe hours and time since installation is not known, the bearing may remain in service until a replacement part is available. However, replacement must be accomplished when bearing becomes available or at the next 720 hour periodic inspection, whichever comes first.

| PART NO. | COMPONENT | OVERHAUL/ RETIREMENT | NOTES |
|---|---|---|---|

20. The overhaul/replacement due time of the main rotor blade should be tracked on DA form 2408-16, block 6k, based upon the remaining life of the main rotor blade. This time is limited by either the blade cuff or main rotor blade itself.

21. Remove all bellcranks, 70400-08150-045, CAGE 15152, SN 32954-1 through 32954-160 and 0063-695 through 0063-912 which exceed 360 flight hours.

22. Replace right tie rod Assembly attachment bolts, SS5025-04H010, when retiring right tie rod Assembly.

23. The main landing gear shock strut piston cylinder has a retirement life of 9,000 flight hours (TB 1-1500-341-01, Aircraft Components Requiring Maintenance Management and Historical Data Reports). To determine serial number and service life for each piston, each unit should perform the following:

a. If time since new for the strut assembly has already been identified and the piston has not been changed then this time is to be transferred to the piston cylinder.

b. If strut or piston cylinder within the assembly has been replaced and date of replacement is unknown, or time is unknown, it is recommended that piston cylinder assembly be replaced at next phase.

c. If strut or piston cylinder time within the assembly can be determined, but piston cylinder serial number cannot be determined, refer to TB 1-1500-328-23, Section 5.

24. A reduced retirement life of 2,500 hours for the specific serial numbered pitch horns, P/N 70102-08111-047 as listed below:

Serial Numbers R241-00101 THRU R241-00355

Serial Numbers R241-00701 THRU R241-00966

Serial Numbers R241-01001 THRU R241-01160

Serial Numbers A241-07534 THRU A241-07594

Serial Numbers A241-07706 THRU A241-07755

Serial Numbers A241-07768 THRU A241-07771

Serial Numbers A241-07800 THRU A241-07831

25. Track replacement due time of No. 2 valve on DA Form 2408-18. No. 1 and No. 2 crossfeed valve can not be intermixed. Time limit of 1500 HRS on the installation time of the No. 2 crossfeed valve. Make sure valve is thrown away after the 1500 HRS is met.

26. Oil Cooler Viscous Damper Bearings, STA 410.5 having P/N 70361-03011-105 (Slotted Duct) installed, are replaced during scheduled 720 hour Periodic Inspection. Installation of P/N 70361-03011-041 Non-slotted Shroud requires bearing replacement at 500 hours.

**OVERHAUL/RETIREMENT INTERVAL** - Continued

**Table 1. Overhaul/Retirement. - Continued**

| PART NO. | COMPONENT | OVERHAUL/ RETIREMENT | NOTES |
|---|---|---|---|
| 27. A reduced retirement life of 550 hours for the specific serial numbered tie rods, P/N 70400-08114-051, as listed below: Serial Numbers 2880802221 THRU 2880802572 | | | |
| 28. Remove P/N 70400-08115-43 from service with CAGE 3R021. | | | |
| 29. Reduce life of forward bellcrank support 70400-08116-048 to 1,400 hours with CAGE 8L513, S/N 01201AI THRU 01686AI. | | | |
| 30. Reduce life of 70400-08162-042, forward bellcrank support assembly to 2,500 with CAGE 78286, S/N A367-00001 THRU A367-00035. | | | |
| 31. Oil cooler axial fan bearings installed in 70361-03005-106 and prior fans are life limited to 2,160 hours. Bearings installed in 70361-03005-107 fans are retired at 2,520 hours. | | | |

**References**
WP 1399 00
WP 1493 00
WP 1547 00
WP 1624 00
WP 1803 00
WP 1805 00

### GENERAL

**NOTE**

- Whenever possible, helicopters which are scheduled for flight should be hangered for at least 2 hours prior to flight.
- When operating in temperatures of 32°F (0°C) or less it is allowable to cover the inlet screens on the main rotor pylon and the lower fuselage inlet screen at STA 247.0 and BL 0.0. Install locally made plates if necessary (Figure 218, WP 1805 00).

### HEAVY SNOW

Helicopter will have snow accumulation removed as soon as possible. In the event of extremely heavy accumulation, it may be necessary to remove snow as it is accumulated.

### FREEZING RAIN

After heavy freezing rain, the accumulated ice should be removed by moving helicopter into the hanger until it is clean and dry.

If access to a hanger is not feasible, a deicing truck may be used if available or helicopter may be cleaned by covering exposed surfaces with a parachute or other suitable cover and directing the warm air from a duct heater under the cover until the ice is melted and all water is removed.

### FLIGHT CONTROL BINDING

If flight control binding is encountered due to icing, standard aircraft deicing fluid and technical isopropyl alcohol, Item 170, WP 1803 00, flush should be used to clear binding.

### MAIN LANDING GEAR

## CAUTION

Damage to strut will result if overpressurized during servicing. Internal damage or strut failure will result. Do not overpressurize strut during servicing.

## NOTE

When the upper stage strut is to be serviced to 1000 psig for cold weather operations, the strut must be serviced while in the hanger and not outside.

When operating in temperatures below 0°F (-;18°C), the main landing gear strut upper stage may be serviced to 1000 psig while in the hanger. **DO NOT EXCEED 1000 PSIG MAXIMUM PRESSURE.**

When the helicopter resumes operation in climates above 0°F (-;18°C), the strut upper stage should be serviced to its normal operating value.

### MAIN ROTOR BLADES

When operating in temperatures below 0°F (-;18°C), the main rotor blade spar should be serviced to (1) PSI more than the maximum service pressure using Blade Pressure Chart found in WP 1624 00.

The blade spar pressure check should be accomplished every 30 days instead of the normal 180 days (WP 1624 00).

When the helicopter resumes operation in climates above 0°F (-;18°C), the blade should be serviced to it's normal operating value.

### ENGINE/APU/GEAR BOX OILS

When operating in temperatures below -29°F (-34°C), aircraft turbine lubricating oil, Item 184, WP 1803 00, must be used in the APU, engines, and all gear boxes.

### HYDRAULIC FLUIDS

When operating in temperatures below -29°F (-34°C) petroleum base hydraulic fluid, Item 145, WP 1803 00, should be used in the hydraulic systems and main rotor head dampers.

### APU ACCUMULATORS

When operating in temperatures below -25°F (-32°C), install winterization kit (WP 1399 00).

### HEATING SYSTEM

Install auxiliary cabin heater kit if available (WP 1493 00).

### GUNNERS WINDOW

Install gunner's window winterization kit (WP 1547 00).

### END OF WORK PACKAGE

## UNIT LEVEL

## AIRCRAFT INVENTORY MASTER GUIDE

**This WP supersedes WP 1744 00, dated 21 March 2007.**

**INITIAL SETUP:**

**References**
PAM 738-751
TM 55-1500-342-23

## INTRODUCTION

### Aircraft Inventory Master Guide

This work package lists those items of installed or loose equipment required by and authorized for using organizations to accomplish their primary or alternate mission. This list will serve to standardize present inventory procedures by using the inventory master guide to determine items installed and loose equipment. In so far as possible, items of equipment are listed in the sequence of their physical location within the aircraft area.

### Aircraft Inventory

Aircraft inventory is subject to change as a result of authorized changes (MWOs) and additions or deletions of property for special missions requirements; therefore, the selection of items of inventory from the inventory master guide may or

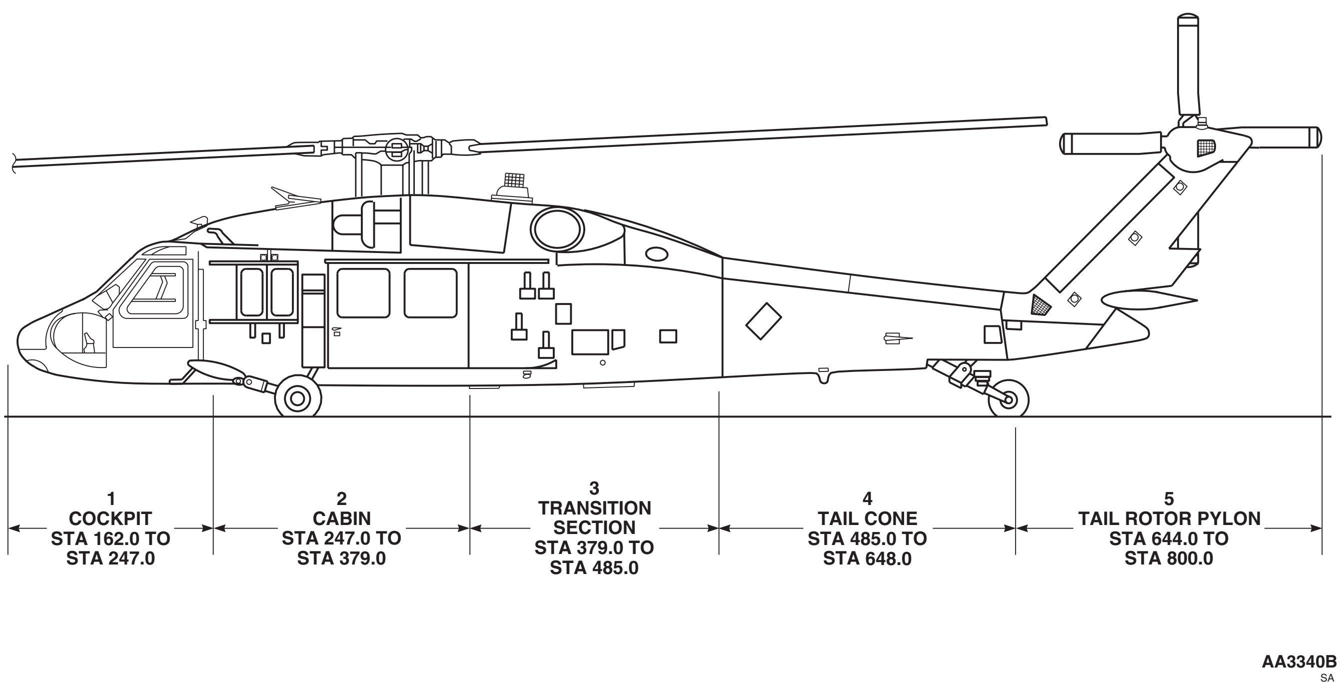

Figure 1. Helicopter Sections.

**INTRODUCTION** - Continued

may not provide a complete inventory list. When it is known that the master guide does not provide a complete inventory list, it will be necessary to research authorized changes (MWOs) and local command directives in order to compile an accurate and exact inventory list. When conduting an inventory, take note, aircraft inventory master guide may also list various versions/models of equipment depicting same part number.

### Forms and Records

Refer to PAM 738-751 for applicable forms and records.

## SECURITY

### Security Classifications

It is desired that aircraft inventory records be unclassified. However, when equipment bearing a security classification or the installation of classified equipment is of a confidential or secret nature, accomplishment of the classification will be in accordance with existing security regulations.

## INVENTORIABLE ITEMS

Tables 1, 2, 3, 4, and 5 contain a listing of inventoriable items by aircraft section.

**Table 1. Section I Cockpit.**

| NOMENCLATURE | | AIRCRAFT SERIES AND NUMBER OF ITEMS NORMALLY INSTALLED | | | | |

## PERIODS OF INVENTORY

### Inventory

When conduting an inventory, take note, aircraft inventory master guide may also list various versions/models of equipment depicting same part number.When conducting an inventory, installed items shall be checked against the Aircraft Inventory Record, DA Form 2408-17, at the following periods:

1. Upon receipt of the aircraft.
2. Prior to transfer of the aircraft to another organization.
3. Upon placing aircraft in storage and upon removal from storage. Aircraft need not be inventoried while in storage.
4. Twelve months elapsed time since last inventory.
5. Loose equipment shipped under separate cover is inventoried upon transfer by the sending activity and immediately upon receipt by the receiving activity.

### GENERAL INFORMATION

#### Introduction

This task contains instructions for storage of helicopter and activation after storage. Storage of helicopter includes corrosion control, which consists primarily of using preservatives to prevent moisture from contacting exposed metal surfaces. There are two main types of corrosion: direct chemical and electrochemical. Direct chemical corrosion occurs when chemicals in the atmosphere cause metal surfaces to erode or etch. Electrochemical corrosion occurs when adjacent surfaces of dissimilar metals become electrolytic cells in the presence of moisture. Preservation procedures are based on the principle that clean, moisture-free surfaces will not corrode. Preservation of the helicopter consists of cleaning the exposed metal surfaces and providing a barrier between the surfaces and the moisture-laden atmosphere.

## GENERAL INFORMATION - Continued

### Environmental Conditions

The weather must be taken into account when a helicopter is to be placed in storage. The category of storage selected will determine the amount of ground operation, motoring of engines, and other required maintenance for which men and materials are needed. Wet weather conditions create corrosion, rot, mildew, and mold. To prevent these from damaging the equipment, do inspections regularly and take proper preventive maintenance action.

The following practices should be used as a guide during exceptionally wet weather conditions:

1. Prevent rot, mildew, and mold by keeping fabrics, rubber, and other susceptible materials as dry as possible. Keep fabric material in the helicopter clean (TM 1-1500-204-23).
2. Treat all visible corrosion (TM 1-1500-344-23).
3. Wash helicopter often and lubricate moving parts when helicopter is exposed to salt-laden air or mud.
4. Open all drain holes to make sure water drains properly.
5. Keep fuel tanks full to prevent condensation in tanks, if tanks are not preserved.

### Components Involved in an Accident

Any component removed for reason of accident shall not be preserved, but shall be shipped in the same condition it was in after the accident.

### Categories of Storage

The information in this task does not cover when or why helicopters are stored and activated, only how this is done. The instructions in this task cover three types of storage. The three types and their duration are:

| TYPE | DURATION |
|---|---|
| Flyable Storage | No Time Limit |
| Short Term Storage | 1 To 45 Days |
| Intermediate Storage | 46 To 180 Days |

## FLYABLE, SHORT TERM, AND INTERMEDIATE STORAGE

### General Procedures

Use these procedures whenever a helicopter is placed in a flyable, short term, or intermediate storage:

1. Tow helicopter using standard procedures (WP 1674 00).
2. Park helicopter using standard procedures (WP 1678 00).
3. Observe fire regulations for helicopters parked outside (TM 5-315).
4. Tie down helicopter using standard procedures (WP 1676 00).
5. Lubricate helicopter before placing it in storage (WP 1639 00).
6. Protect engines from corrosion resulting from dirt, moisture, and disuse (TM 1-2840-248-23).

## FLYABLE, SHORT TERM, AND INTERMEDIATE STORAGE - Continued

7. Cover and protect elastomeric bearings from sunlight. Do not allow corrosion preventative compound to get on bearings or rubber boots.

### Inspection During Storage

The local maintenance officer is responsible for maintaining proper helicopter ventilation and preservation; maintaining helicopter drain valves in operable condition and free from obstructions (open drain valves for the duration of the storage period); providing drains in protective covers at locations where water collects; and for establishing an inspection program for stored helicopters. Inspect as follows:

1. Determine peak interior helicopter temperatures during hot weather conditions. Get temperature information from standard thermometers temporarily hung in the helicopter. Record interior temperatures at 30 minute intervals during hottest part of day. Ventilate helicopter if interior temperatures go over 160°F (71°C). Provide fan ventilation if normal ventilating methods are not enough.
2. Periodically inspect helicopter for corrosion. Frequency of inspection will be determined by local commander based on humidity, temperature, atmospheric conditions and storage conditions. When found, treat corrosion as required.
3. Inspect tie down devices (ground wire, wheel chocks, mooring ropes, rods, and eyes) at regular intervals. Inspect tie down devices immediately after helicopter has been subjected to winds over 40 m.p.h. Replace any tie down devices that are bent or show signs of wear.
4. Inspect protective covers for proper drainage. Replace covers that are damaged or worn.
5. Inspect communication equipment for fungus and corrosion. Remove, repair, and package communication equipment that is deteriorating (MIL-STD-2073-1). Store packaged equipment in helicopter from which it was removed. Do not remove or package antennas.
6. Check that at least 75% normal tire pressure is kept during storage period (WP 1598 00 and WP 1600 00).

### Inspect and Prepare MAU 40/A Ejector Rack for Storage

Refer to Table 1.

**Table 1. Inspection and Storage Criteria - MAU 40/A.**

| NOMENCLATURE | INSPECT FOR | REPAIR | SHORT TERM STORAGE | INTERMEDIATE STORAGE |
|---|---|---|---|---|
| Cartridge Retainers | Corrosion, nicks, burrs, lubrication. | Clean, repair, lubricate or replace. | x | x |
| Breech Assembly | Corrosion, nicks, burrs, lubrication. | Clean, repair, lubricate or replace. | x | x |
| Slave Piston Assy | Corrosion, nicks, burrs, lubrication. | Clean, repair, lubricate or replace. | x | x |
| Stores-Away-Switch Plunger (64JI3000-5 only) | Binding or bent. | Replace. | x | x |
| Cylinder Block | Corrosion, nicks, burrs, lubrication. | Clean, repair, lubricate or replace. | x | x |

**FLYABLE, SHORT TERM, AND INTERMEDIATE STORAGE** - Continued

**Table 1. Inspection and Storage Criteria - MAU 40/A. - Continued**

| NOMENCLATURE | INSPECT FOR | REPAIR | SHORT TERM STORAGE | INTERMEDIATE STORAGE |
|---|---|---|---|---|
| Ejection Piston | Corrosion, nicks, burrs, lubrication. | Clean, repair, lubricate or replace. | x | x |
| Orifice Assembly | Corrosion, nicks, burrs, lubrication and wear. | Clean, repair, lubricate or replace. | x | x |
| Bolts, Screws, Nuts, Springs | Corrosion, nicks, burrs. | Clean, repair, or replace. | x | x |
| O-Ring Packing | Wear, damage, and lubrication. | Replace and lubricate. | x | x |
| Electrical Wiring Assy | Electrical circuits. | Troubleshoot, repair and/or replace malfunctioning component. | x | x |
| | **WARNING** Injury to personnel and damage to equipment will result if grease is not properly applied. Failure to apply an even coating of grease to linkage junction points may cause icing problems which may delay or prevent release of in-flight safety lock. | | | |
| Mechanical Linkage | Freedom of movement and proper operation when operating linkage junction manually. | Remove upper close out channel assembly and adjust. Lubricate all linkage junction points. | x | x |
| Hook Manual | Hooks open or close with torque of 25 - 100 inch pounds manually applied to hook. | If torque required to open or close hooks exceeds 100 inch-pounds, disassemble, clean, inspect, lubricate, and reassemble. If opening and closing torque still exceeds 100 inch-pounds, rack will require overhaul. | x | x |
| MAU-40/A | Visually inspect exposed external surfaces for damage and corrosion. | Clean, repair or replace. | x | x |

## PREPARING HELICOPTER FOR FLYABLE STORAGE

### Inspection Before Flyable Storage

**NOTE**

Helicopters in flyable storage will be kept in a serviceable condition.

1. Install static ground wire.
2. Do a 10 hour engine inspection (TM 1-2840-248-23).
3. Enter in aircraft log book. Include date and type of storage.

### Engines

Preserve engines in accordance with short term storage criteria (TM 1-2840-248-23).

### Auxiliary Power Unit

1. Check and service APU (WP 1604 00).
2. Start and operate APU for 10 to 15 minutes (TM 1-1520-237-10).
3. Install APU exhaust cover (WP 1677 00).
4. Seal APU inlet with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Hydraulic Systems

1. Service hydraulic systems (WP 1603 00).
2. Check accumulators for required pressure (WP 1603 00).

### Main Rotor Head

1. Check indicators on main rotor dampers for proper fluid level (WP 1610 00).
2. Service dampers if necessary (WP 1610 00).

### Gear Boxes

Check and service main, intermediate, and tail gear boxes to proper oil level, if necessary (WP 1607 00, WP 1608 00, and WP 1609 00).

### Fuel Tanks

1. Drain water from fuel tanks before adding fuel.

**NOTE**

Keep fuel tanks at full level for duration of storage.

2. Refuel main tanks (WP 1613 00).

### Electrical System

**NOTE**

Remove battery from helicopter when ambient temperature is below -40°F(-40°C).
Store battery in heated building.

1. Disconnect battery connector, P140, from battery (WP 0857 00).
2. Disconnect battery sensor connector, P141, from battery and connect to stowage receptacle (WP 0857 00).

**PREPARING HELICOPTER FOR FLYABLE STORAGE** - Continued

3. Seal APU inlet with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Landing Gear

1. Maintain normal tire pressure (WP 1598 00 and WP 1600 00).
2. Maintain normal shock strut extension (WP 1597 00 and WP 1599 00).
3. Clean polished chrome surfaces on exposed pistons using machinery wiping towel, Item 344, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00.
4. Coat cleaned piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00 or petroleum base hydraulic fluid, Item 145, WP 1803 00.

### Airframe

1. Close doors and windows unless ventilation is required.
2. Cover all fuselage openings, to keep water, dust, or other foreign matter out.

### Flight Controls

Release friction lock on pilot's collective stick.

### Inspection During Flyable Storage

1. Inspect using local directives.
2. Inspect helicopter. Refer to, FLYABLE, SHORT TERM, AND INTERMEDIATE STORAGE, in this work package.

**NOTE**

Make sure main and tail rotor blades are turned during engine run up.

3. Engine run up is required every 14 days.

## PUTTING HELICOPTER INTO SERVICE AFTER FLYABLE STORAGE

### Airframe

**CAUTION**

Before doing operational checks, make sure all systems and components are depreserved and serviced.

1. Remove tiedown restraints (WP 1676 00).
2. Remove protective covers and stow them (WP 1677 00).
3. Remove all barrier material.
4. Clean residue left by barrier material tape with cleaning compound solvent, Item 71, WP 1803 00.
5. Clean interior and exterior fuselage surfaces (TM 1-1500-344-23).
6. Open doors and windows.

### Landing Gear

1. Check tires for proper inflation, condition and rotation (WP 1598 00 and WP 1600 00).
2. Clean polished chrome surfaces on exposed pistons using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.

**PUTTING HELICOPTER INTO SERVICE AFTER FLYABLE STORAGE** - Continued

3. Coat cleaned piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00, or petroleum base hydraulic fluid, Item 145, WP 1803 00.
4. Service shock struts (WP 1597 00 and WP 1599 00).

### Electrical System

1. Remove tape and barrier material from battery connector.
2. Connect battery connector, P140, to battery (WP 0857 00).
3. Connect battery sensor connector, P141, to battery (WP 0857 00).

### Fuel Tanks

1. Drain water from fuel tanks.
2. Service fuel tanks as required (WP 1612 00).

### Gear Boxes

Check and service main, intermediate, and tail gear boxes to proper oil level, if necessary (WP 1612 00, WP 1608 00, and WP 1609 00).

### Main Rotor Head

1. Check indicators on main rotor dampers for proper fluid level (WP 1610 00).
2. If necessary, service dampers (WP 1610 00).

### Hydraulic Systems

1. Service hydraulic systems (WP 1603 00).
2. Check hydraulic accumulators for required precharge pressure (WP 1603 00).

### Engines

1. Remove and stow air inlet protectors from engines.
2. Remove and stow engine air inlet and exhaust plugs.
3. Check and service engine (TM 1-2840-248-23).
4. Clean engine external surfaces, as necessary (TM 1-2840-248-23).

### Auxiliary Power Unit

1. Remove tape and barrier material from intake.
2. Remove and stow APU exhaust plug.
3. Check and service APU (WP 1604 00).
4. Start and run APU for 5 minutes (TM 1-1520-237-10).
5. Shut down APU (TM 1-1520-237-10).

### Inspection After Activation From Flyable Storage

1. Check aircraft log book for record of components removed or disconnected. Check that these components have been installed or connected.
2. Check that all procedures required to activate helicopter from flyable storage have been done.
3. Check that aircraft log book entries have been posted.
4. Do a Preventative Maintenance Daily Inspection (TM 1-1520-237-PMD).

## PREPARING HELICOPTER FOR SHORT TERM STORAGE

### Inspection Before Short Term Storage

**NOTE**

Helicopters in short term storage will be kept in a serviceable condition.

1. Install static ground wire.
2. Do a Preventative Maintenance Daily Inspection (TM 1-1520-237-PMD).
3. Enter in aircraft log book. Include date, type of storage, and removed or disconnected components.

### Engines

1. Preserve engines in accordance with TM 1-2840-248-23.
2. Install engine exhaust plug (WP 1677 00).
3. Install engine inlet plug (WP 1677 00).

### Auxiliary Power Unit

1. Check and service APU (WP 1604 00).
2. On helicopters with APU, 116305-100 through 116305-300 series, disconnect electrical connector from ignition exciter (TM 55-2835-208-23).
3. On helicopters with APU, 3800480-1 or 3800480-2, disconnect electrical connector from ignition unit (TM 55-2835-209-23).
4. On helicopters with APU, 3800480-1 or 3800480-2, insulate connector (TM 55-2835-209-23).
5. On helicopters with APU, 116305-100 through 116305-300 series, insulate connector (TM 55-2835-208-23).
6. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from fuel manifold (TM 55-2835-208-23).
7. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel manifold (TM 55-2835-209-23).
8. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel nozzle assembly (TM 55-2835-209-23).
9. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from start fuel injector (TM 55-2835-208-23).
10. On helicopters with APU, 116305-100 through 116305-300 series, blow out remaining fuel from fuel manifold and start fuel injector. Use dry compressed air or bottled nitrogen, Item 199, WP 1803 00, at 100 to 125 psi.
11. On helicopters with APU, 3800480-1 or 3800480-2, blow out remaining fuel from fuel manifold and fuel nozzle assembly. Use dry compressed air or bottled nitrogen, Item 199, WP 1803 00, at 100 to 125 psi.
12. Place rags under disconnected lines to catch fuel and oil.
13. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from fuel inlet filter (TM 55-2835-208-23).
14. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel inlet port in fuel lower cover (TM 55-2835-209-23).
15. On helicopters with APU, 3800480-1 or 3800480-2, connect gravity-feed supply of aircraft turbine lubricating oil, Item 183, WP 1803 00 to filter fitting (TM 55-2835-209-23).

**PREPARING HELICOPTER FOR SHORT TERM STORAGE** - Continued

16. On helicopters with APU, 116305-100 through 116305-300 series, connect gravity-feed supply of aircraft turbine lubricating oil, Item 183, WP 1803 00, to filter fitting (TM 55-2835-208-23).
17. Place APU switch to START and motor APU until APU automatically shuts down.
18. Recharge accumulator, using external power or APU handpump (WP 1605 00).
19. Repeat motoring until oil flows through fuel control and out of drain.
20. Disconnect oil supply.
21. Motor APU to remove any residual preservative oil from fuel system.
22. Recharge accumulator (WP 1605 00).
23. Disconnect drain lines.
24. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to fuel manifold (TM 55-2835-208-23).
25. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel inlet fitting in fuel control lower cover (TM 55-2835-209-23).
26. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel nozzle assembly (TM 55-2835-209-23).
27. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to start fuel injector (TM 55-2835-208-23).
28. On helicopters with APU, 3800480-1 or 3800480-2, connect electrical connector to ignition unit (TM 55-2835-209-23).
29. On helicopters with APU, 116305-100 through 116305-300 series, connect electrical connector to ignition exciter (TM 55-2835-208-23).
30. Place a green tag on the APU engine stating: ″APU FUEL SYSTEM PRESERVED WITH LUBRICATING OIL, MIL-L-6081. FLUSHING REQUIRED BEFORE STARTING.″

## CAUTION

Do not get cleaning compound solvent on wire insulation, rubber, or gasket material surfaces. These surfaces may be damaged by cleaning compound solvent.

31. Clean APU external surfaces with machinery wiping towel, Item 344, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00.
32. Dry APU with machinery wiping towel, Item 344, WP 1803 00, then blow dry with compressed air.
33. Install APU exhaust cover, 70700-20509-041.
34. Seal APU inlet with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Hydraulic Systems

1. Service hydraulic systems (WP 1603 00).
2. Check accumulator for proper charge (WP 1603 00).
3. Clean exposed pistons of all servos with machinery wiping towel, Item 344, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00.
4. Coat all cleaned pistons with petroleum base hydraulic fluid, Item 145, WP 1803 00.

**PREPARING HELICOPTER FOR SHORT TERM STORAGE** - Continued

### Gear Boxes

1. Check and fill main, intermediate, and tail gear boxes to top of box (WP 1607 00, WP 1608 00, and WP 1609 00).
2. Coat exposed surfaces of drive train parts with corrosion preventive compound, Item 103, WP 1803 00.

### Main Rotor Blades

If desired, fold main rotor blades (WP 1679 00).

### Main Rotor Head

1. Check indicators on main rotor dampers for proper fluid level (WP 1610 00).
2. If necessary, service dampers (WP 1610 00).
3. Coat exposed surfaces with corrosion preventive compound, Item 103, WP 1803 00.
4. Cover elastomeric bearings with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00, to protect from sunlight. Do not allow corrosion preventive compound to get on bearings or rubber boots.

### Tail Rotor

1. Coat exposed metal surfaces with corrosion preventive compound, Item 103, WP 1803 00.
2. Cover hub, pitch change links, and tail gear box output shaft with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Fuel Tanks

1. Helicopter will be stored with fuel tanks at full level for duration of storage.
2. Drain water from tanks before adding fuel.

### Electrical System

## NOTE

Remove battery from helicopter when ambient temperature is below°° -40F(-40C).
Store battery in heated building.

1. Disconnect battery connector, P140, from battery (WP 0857 00).
2. Disconnect battery sensor connector, P141, from battery and connect to stowage receptacle (WP 0857 00).
3. Wrap battery connector with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00,

### Instruments

1. Clean pitot tube with cleaning compound solvent, Item 71, WP 1803 00.
2. Install pitot tube cover (WP 1677 00).

### Avionics

## NOTE

Do not remove unclassified avionics from helicopter unless malfunctions exist.
Repaired avionics must be installed as soon as component returns from the repair shop.

1. Remove, protect, and return classified avionics equipment to proper storage facility as called for in publications that cover these components.

**PREPARING HELICOPTER FOR SHORT TERM STORAGE** - Continued

2. Remove 9-volt battery from doppler navigation display unit.

### Landing Gear

1. Maintain normal tire pressure (WP 1598 00 and WP 1600 00).
2. Maintain normal shock strut extension (WP 1597 00 and WP 1599 00).
3. Clean polished chrome surfaces on exposed pistons using machinery wiping towel, Item 344, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00.
4. Coat cleaned piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00, or petroleum base hydraulic fluid, Item 145, WP 1803 00.
5. Cover tires with water vaporproofed barrier material, Item 53, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Airframe

1. Clean interior and exterior fuselage surfaces (WP 1610 00 and TM 1-1500-344-23).
2. Close doors and windows unless ventilation is required.
3. Cover all fuselage openings, to keep water, dust, or other foreign matter out.
4. Moor helicopter (WP 1676 00).

### Flight Controls

Release friction lock on pilot's collective stick.

### Inspection During Short Term Storage

1. Inspect using local directives.
2. Inspect helicopter. Refer to, FLYABLE, SHORT TERM, AND INTERMEDIATE STORAGE, in this work package.

## PUTTING HELICOPTER INTO SERVICE AFTER SHORT TERM STORAGE

### Airframe

**CAUTION**

Before operational checks, make sure related systems or components are depreserved and serviced.

1. Remove tiedown restraints (WP 1676 00).
2. Remove protective covers and stow them (WP 1677 00).
3. Remove all barrier material from airframe and components.
4. Clean residue left by barrier material tape with cleaning compound solvent, Item 71, WP 1803 00.
5. Clean interior and exterior fuselage surfaces (TM 1-1500-344-23).
6. Open doors and windows.

### Landing Gear

1. Check tires for proper inflation, condition and rotation (WP 1598 00 and WP 1600 00).
2. Clean polished chrome surfaces on exposed pistons using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
3. Coat cleaned piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00, or petroleum base hydraulic fluid, Item 145, WP 1803 00.

**PUTTING HELICOPTER INTO SERVICE AFTER SHORT TERM STORAGE** - Continued

4. Service shock struts (WP 1597 00 and WP 1599 00).

### Avionics

1. Requisition classified avionics equipment from supply office. Protection and installation of classified equipment must be per applicable directives.
2. Remove tags from avionics equipment.
3. Install 9-volt battery in doppler navigation display unit.

### Instruments

1. Remove pitot tube protective cover and stow it (WP 1677 00).
2. Remove tape and barrier material sealing static and sideslip ports.
3. Remove tape residue with cleaning compound solvent, Item 71, WP 1803 00.

### Electrical System

1. Install battery (WP 0857 00).
2. Remove tape and barrier material from battery connector.
3. Connect battery connector, P140, to battery (WP 0857 00).
4. Connect battery sensor connector, P141, to battery (WP 0857 00).

### Fuel Tanks

1. Drain any water from fuel tanks.
2. Service fuel tanks as required (WP 1612 00).

### Tail Rotor

Clean corrosion preventive compound from tail rotor using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.

### Main Rotor Head

**CAUTION**

Do not get cleaning compound solvent on elastomeric bearings or rubber boots.

1. Clean corrosion preventive compound from main rotor head using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
2. Check indicators on main rotor dampers for proper fluid level (WP 1610 00).
3. If necessary, service dampers (WP 1610 00).

### Main Rotor Blades

Unfold main rotor blades, if required (WP 1679 00).

### Gear Boxes

1. Drain some oil and check main gear box for proper oil level (WP 1607 00).
2. Drain some oil and check intermediate and tail gear boxes for proper oil level. Stop draining at proper oil level (WP 1608 00 and WP 1609 00).
3. Clean corrosion preventive compound from drive train components. Use machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.

**PUTTING HELICOPTER INTO SERVICE AFTER SHORT TERM STORAGE** - Continued

### Hydraulic Systems

1. Service hydraulic systems (WP 1603 00).
2. Check accumulator for proper pressure (WP 1603 00).
3. Clean exposed pistons of all servos with machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
4. Coat all clean piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00 or petroleum base hydraulic fluid, Item 145, WP 1803 00.

### Auxiliary Power Unit

1. Remove tape and barrier material from intake.
2. Remove and stow APU exhaust plug.
3. Check and service APU (WP 1604 00).
4. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from fuel manifold (TM 55-2835-208-23).
5. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel manifold (TM 55-2835-209-23).
6. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel nozzle assembly (TM 55-2835-209-23).
7. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from start fuel injector (TM 55-2835-208-23).
8. On helicopters with APU, 3800480-1 or 3800480-2, connect drain lines to disconnected fuel lines (TM 55-2835-209-23).
9. On helicopters with APU, 116305-100 through 116305-300 series, connect drain lines to disconnected fuel lines (TM 55-2835-208-23).
10. Place end of drain lines in empty quart container.
11. Place APU switch to START and motor APU until APU automatically shuts down.
12. Recharge accumulator, using external power or APU handpump (WP 1605 00).
13. Repeat motoring until oil-free fuel flows thru fuel control and out of drain lines.
14. Recharge accumulator to required pressure (WP 1605 00).
15. On helicopters with APU, 116305-100 through 116305-300 series, disconnect drain lines (TM 55-2835-208-23).
16. On helicopters with APU, 3800480-1 or 3800480-2, disconnect drain lines (TM 55-2835-209-23).
17. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel manifold (TM 55-2835-209-23).
18. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to fuel manifold (TM 55-2835-208-23).
19. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to start fuel injector (TM 55-2835-208-23).
20. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel nozzle assembly (TM 55-2835-209-23).
21. On helicopters with APU, 3800480-1 or 3800480-2, connect electrical connector to ignition unit (TM 55-2835-209-23).

**PUTTING HELICOPTER INTO SERVICE AFTER SHORT TERM STORAGE** - Continued

22. On helicopters with APU, 116305-100 through 116305-300 series, connect electrical connector to ignition exciter (TM 55-2835-208-23).
23. On helicopters with APU, 116305-100 through 116305-300 series, drain accumulated fuel from combustor fuel drain (TM 55-2835-208-23).
24. On helicopters with APU, 3800480-1 or 3800480-2, drain accumulated fuel from orifice fitting (TM 55-2835-209-23).
25. Start and operate APU for 5 minutes (TM 1-1520-237-10).

### Engines

1. Remove and stow engine inlet and exhaust plugs (WP 1677 00).
2. Depreserve engine (TM 1-2840-248-23).

### Inspection After Activation From Short Term Storage

1. Check aircraft log book for record of components removed or disconnected. Check that these components have been installed or connected.
2. Check that all procedures required to activate helicopter after short term storage have been done.
3. Check that all PRESERVED tags have been removed.
4. Check that aircraft log book entries have been posted for helicopter, engines, and APU.
5. Do a Preventative Maintenance Daily Inspection (TM 1-1520-237-PMD).

## PREPARING HELICOPTER FOR INTERMEDIATE STORAGE

### Inspection Before Intermediate Storage

**NOTE**

Helicopters in intermediate storage will be kept in a serviceable condition.

1. Install static ground wire.
2. Do a 10 hour/14 day Preventative Maintenance Daily Inspection (TM 1-1520-237-PMD).
3. On helicopters with APU, 3800480-1 or 3800480-2, disconnect electrical connector from ignition unit exciter (TM 55-2835-209-23).
4. On helicopters with APU, 3800480-1 or 3800480-2, insulate connector (TM 55-2835-209-23).
5. Enter in aircraft log book. Include date, type of storage, and removed or disconnected components.

### Engines

1. Preserve engines in accordance with (TM 1-2840-248-23).
2. Install engine exhaust plug (WP 1677 00).
3. Install engine inlet plug (WP 1677 00).

### Auxiliary Power Unit

1. Check and service APU oil tank to FULL (WP 1604 00).
2. On helicopters with APU, 116305-100 through 116305-300 series, disconnect electrical connector from ignition exciter (TM 55-2835-208-23).

**PREPARING HELICOPTER FOR INTERMEDIATE STORAGE** - Continued

3. On helicopters with APU, 3800480-1 or 3800480-2, disconnect electrical connector from ignition unit (TM 55-2835-209-23).
4. On helicopters with APU, 3800480-1 or 3800480-2, insulate connector (TM 55-2835-209-23).
5. On helicopters with APU, 116305-100 through 116305-300 series, insulate connector (TM 55-2835-208-23).
6. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from fuel manifold (TM 55-2835-208-23).
7. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel manifold (TM 55-2835-209-23).
8. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel nozzle assembly (TM 55-2835-209-23).
9. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from start fuel injector (TM 55-2835-208-23).
10. On helicopters with APU, 116305-100 through 116305-300 series, blow out remaining fuel from fuel manifold and start fuel injector. Use dry compressed air or bottled nitrogen, Item 199, WP 1803 00, at 100 to 125 psi.
11. On helicopters with APU, 3800480-1 or 3800480-2, blow out remaining fuel from fuel manifold and fuel nozzle assembly. Use dry compressed air or bottled nitrogen, Item 199, WP 1803 00, at 100 to 125 psi.
12. Place rags under disconnected lines to catch fuel and oil.
13. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from fuel inlet filter (TM 55-2835-208-23).
14. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel inlet port in fuel lower cover (TM 55-2835-209-23).
15. On helicopters with APU, 3800480-1 or 3800480-2, connect gravity-feed supply of aircraft turbine lubricating oil, Item 183, WP 1803 00, to filter fitting (TM 55-2835-209-23).
16. On helicopters with APU, 116305-100 through 116305-300 series, connect gravity-feed supply of aircraft turbine lubricating oil, Item 182, WP 1803 00, to filter fitting (TM 55-2835-208-23).
17. Place APU switch to START and motor APU until APU automatically shuts down.
18. Recharge accumulator, using external power or APU handpump (WP 1605 00).
19. Repeat motoring until oil flows through fuel control and out of drain.
20. Disconnect oil supply.
21. Motor APU to remove any residual preservative oil from fuel system.
22. Recharge accumulator (WP 1605 00).
23. Disconnect drain lines.
24. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to fuel manifold (TM 55-2835-208-23).
25. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel inlet fitting in fuel control lower cover (TM 55-2835-209-23).
26. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel nozzle assembly (TM 55-2835-209-23).
27. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to start fuel injector (TM 55-2835-208-23).

**PREPARING HELICOPTER FOR INTERMEDIATE STORAGE** - Continued

28. On helicopters with APU, 3800480-1 or 3800480-2, connect electrical connector to ignition unit (TM 55-2835-209-23).
29. On helicopters with APU, 116305-100 through 116305-300 series, connect electrical connector to ignition exciter (TM 55-2835-208-23).
30. Place a green tag on the APU engine stating: ″APU FUEL SYSTEM PRESERVED WITH LUBRICATING OIL, MIL-L-6081. FLUSHING REQUIRED BEFORE STARTING.″

## CAUTION

Do not get cleaning compound solvent on wire insulation, rubber, or gasket material surfaces. These surfaces may be damaged by cleaning compound solvent.

31. Clean APU external surfaces with machinery wiping towel, Item 344, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00.
32. Dry APU with machinery wiping towel, Item 344, WP 1803 00, then blow dry with compressed air.
33. Install APU exhaust cover, 70700-20509-041.
34. Seal APU inlet with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Hydraulic Systems

1. Service hydraulic systems (WP 1603 00
2. Check accumulator for proper charge (WP 1603 00).
3. Clean exposed pistons of all servos with machinery wiping towel, Item 344, WP 1803 00, dampened with cleaning compound solvent, Item 71, WP 1803 00.
4. Coat all cleaned pistons with fire resistant hydraulic fluid, Item 147 or petroleum base hydraulic fluid Item 145, WP 1803 00.

### Gear Boxes

1. Check and fill main, intermediate, and tail gear boxes, to top of gear box (WP 1607 00, WP 1608 00, and WP 1609 00).
2. Coat exposed surfaces of drive train components with corrosion preventive compound, Item 103, WP 1803 00.

### Main Rotor Blades

1. Remove main rotor blades (WP 0576 00).
2. Tag blades with helicopter serial number.
3. Clean blade cuffs (WP 1633 00).
4. Coat blade pin sockets with corrosion preventive compound, Item 103, WP 1803 00.
5. Cover cuffs with water vaporproofed barrier material, Item 53, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.
6. Clean blades (WP 1633 00).
7. Place blades in shipping containers.

### Main Rotor Head

1. Check indicators on main rotor dampers for proper fluid level (WP 1610 00).
2. If necessary, service dampers (WP 1610 00).

## PREPARING HELICOPTER FOR INTERMEDIATE STORAGE - Continued

3. Coat exposed surfaces with corrosion preventive compound, Item 103, WP 1803 00.
4. Cover elastomeric bearings with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00, to protect from sunlight. Do not allow corrosion preventive compound to get on bearings or rubber boots.

### Tail Rotor

1. Remove tail rotor blades (WP 0585 00).
2. Tag and store tail rotor components (other than tail rotor blades) in cabin area.
3. Tag blades with helicopter serial number and place in shipping containers.
4. Coat exposed metal surfaces with corrosion preventive compound, Item 103, WP 1803 00.
5. Cover tail gear box output shaft with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Fuel Tanks

Helicopter will be stored with fuel tanks drained, purge tanks (TM 1-1500-204-23).

### Electrical System

1. Disconnect battery connector, P140, from battery (WP 0857 00).
2. Disconnect battery sensor connector, P141, from battery and connect to stowage receptacle (WP 0857 00).
3. Wrap battery connector with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.
4. Remove and transfer to battery shop or other heated building.

### Instruments

1. Remove clock (WP 0794 00).
2. Attach a green condition tag on clock and store in secure facility.
3. Clean pitot tube with cleaning compound solvent, Item 71, WP 1803 00.
4. Install pitot tube cover (WP 1677 00).

### Avionics

**NOTE**

Do not remove unclassified communication equipment from helicopter unless malfunctions exist. Repaired communication equipment must be installed immediately upon return from the repair shop.

1. Remove, protect, and return classified communication equipment to proper storage facility as noted in applicable directives.
2. Cover disconnected connectors with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.
3. Clean antenna masts, metal mounts, brackets, and associated mechanical items. Use cleaning compound solvent, Item 71, WP 1803 00.
4. Coat cleaned surfaces. Use corrosion preventive compound, Item 103, WP 1803 00.
5. If required, remove mechanical items showing evidence of corrosion.

**PREPARING HELICOPTER FOR INTERMEDIATE STORAGE** - Continued

6. Remove corrosion, preserve, package, and store mechanical items with equipment from which it was removed.
7. Remove 9-volt battery from doppler navigation display unit.

### Landing Gear

1. Maintain normal tire pressure (WP 1598 00 and WP 1600 00).
2. Maintain normal shock strut extension (WP 1597 00 and WP 1599 00).
3. Clean polished chrome surfaces on exposed pistons using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
4. Coat cleaned piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00 or petroleum base hydraulic fluid, Item 145, WP 1803 00.
5. Cover tires with water vaporproofed barrier material, Item 53, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.

### Utility Items

1. Remove fire extinguishers from cockpit and cabin (WP 1587 00 and WP 1588 00).
2. Transfer fire extinguishers to proper storage facility.
3. Remove first aid kits (WP 1587 00 and WP 1588 00).

### Airframe

1. Clean interior and exterior fuselage surfaces (TM 1-1500-344-23).
2. Close doors and windows unless ventilation is required.
3. Cover fuselage openings to keep water, dust, or other foreign matter out.
4. Clean external surfaces of plastic windows (TM 1-1500-344-23).
5. Dry windows and surrounding areas thoroughly.
6. Cover windows with water vaporproofed barrier material, Item 55, WP 1803 00. Secure with pressure sensitive adhesive tape, Item 331, WP 1803 00.
7. Moor helicopter (WP 1676 00).

### Flight Controls

Release friction lock on pilot's collective stick.

### Inspection During Intermediate Storage

1. Inspect helicopter using local directives.
2. Inspect helicopter Refer to, FLYABLE, SHORT TERM, AND INTERMEDIATE STORAGE, in this work package.

## PUTTING HELICOPTER INTO SERVICE AFTER INTERMEDIATE STORAGE

### Airframe

**CAUTION**

Before operational checks, make sure related systems or components are depreserved and serviced.

1. Remove tiedown restraints.
2. Remove protective covers and stow them.

## PUTTING HELICOPTER INTO SERVICE AFTER INTERMEDIATE STORAGE - Continued

3. Remove all barrier material from airframe and components.
4. Clean residue left by barrier material tape with cleaning compound solvent, Item 71, WP 1803 00.
5. Clean interior and exterior fuselage surfaces (WP 1609 00 and TM 1-1500-344-23).
6. Open doors and windows.

### Landing Gear

1. Check tires for proper inflation and condition (WP 1598 00 and WP 1600 00) (TM 55-2620-200-24).
2. Clean polished chrome surfaces on exposed pistons using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
3. Coat cleaned piston surfaces with fire resistant hydraulic fluid, Item 144, WP 1803 00 or petroleum base hydraulic fluid, Item 145, WP 1803 00.
4. Service main landing gear and tail landing gear shock struts (WP 1597 00 and WP 1599 00).

### Utility Items

1. Install fire extinguishers in cabin and cockpit (WP 1587 00 and WP 1588 00).
2. Install first aid kits in cabin and cockpit (WP 1587 00 and WP 1588 00).

### Avionics

1. Requisition classified communication equipment from supply office. Protect and install classified equipment using applicable directives.
2. Remove tags from communication equipment.
3. Install 9-volt battery in doppler navigation.

### Instruments

1. Remove pitot tube protective cover and stow it (WP 1677 00).
2. Remove tape and barrier material sealing static and sideslip ports.
3. Remove tape residue with cleaning compound solvent, Item 71, WP 1803 00.
4. Install clock (WP 0794 00).

### Electrical System

1. Install battery (WP 0857 00).
2. Remove tape and barrier material from battery connector.
3. Connect battery connector, P140, to battery (WP 0857 00).
4. Connect battery sensor connector, P141, to battery (WP 0857 00).

### Fuel Tanks

1. Prepare fuel tanks for service (TM 1-1500-204-23).
2. Service fuel tanks (WP 1612 00).

### Tail Rotor

1. Clean corrosion preventive compound from tail rotor using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
2. Install tail rotor blades (WP 0585 00).

**PUTTING HELICOPTER INTO SERVICE AFTER INTERMEDIATE STORAGE** - Continued

### Main Rotor Head

## CAUTION

Do not get cleaning solvent compound on elastomeric bearings or rubber boots.

1. Clean corrosion preventive compound from main rotor head using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
2. Check indicators on main rotor dampers for proper fluid level (WP 1610 00).
3. If necessary, service dampers (WP 1610 00).

### Main Rotor Blades

## CAUTION

Make sure color codes on blades agree with color code on sleeves.

Install main rotor blades (WP 0576 00).

### Gear Boxes

1. Drain some oil and check main gear box for proper oil level (WP 1607 00).
2. Drain some oil and intermediate and tail gear boxes for proper oil level. Stop draining at proper oil level (WP 1608 00 and WP 1609 00).
3. Clean corrosion preventive compound from drive train components using machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.

### Hydraulic Systems

1. Service hydraulic systems (WP 1603 00).
2. Check accumulator for proper pressure (WP 1603 00).
3. Clean exposed pistons of all servos with machinery wiping towel, Item 344, WP 1803 00, and cleaning compound solvent, Item 71, WP 1803 00.
4. Coat all cleaned pistons with fire resistant hydraulic fluid, Item 144, WP 1803 00, or petroleum base hydraulic fluid, Item 145, WP 1803 00.

### Auxiliary Power Unit

1. Remove tape and barrier material from intake.
2. Remove and store APU exhaust plug.
3. Check and service APU (WP 1604 00).
4. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from fuel manifold (TM 55-2835-208-23).
5. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel manifold (TM 55-2835-209-23).
6. On helicopters with APU, 3800480-1 or 3800480-2, disconnect fuel line from fuel nozzle assembly (TM 55-2835-209-23).
7. On helicopters with APU, 116305-100 through 116305-300 series, disconnect fuel line from start fuel injector (TM 55-2835-208-23).
8. On helicopters with APU, 3800480-1 or 3800480-2, connect drain lines to disconnected fuel lines (TM 55-2835-209-23).

## PUTTING HELICOPTER INTO SERVICE AFTER INTERMEDIATE STORAGE - Continued

9. On helicopters with APU, 116305-100 through 116305-300 series, connect drain lines to disconnected fuel lines (TM 55-2835-208-23).
10. Place end of drain lines in empty quart container.
11. Place APU switch to START and motor APU until APU automatically shuts down.
12. Recharge accumulator, using external power or APU handpump (WP 1605 00).
13. Repeat motoring until oil-free fuel flows through fuel control and out of drain lines.
14. Recharge accumulator to required pressure (WP 1605 00).
15. On helicopters with APU, 116305-100 through 116305-300 series, disconnect drain lines (TM 55-2835-208-23).
16. On helicopters with APU, 3800480-1 or 3800480-2, disconnect drain lines (TM 55-2835-209-23).
17. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel manifold (TM 55-2835-209-23).
18. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to fuel manifold (TM 55-2835-208-23).
19. On helicopters with APU, 116305-100 through 116305-300 series, connect fuel line to start fuel injector (TM 55-2835-208-23).
20. On helicopters with APU, 3800480-1 or 3800480-2, connect fuel line to fuel nozzle assembly (TM 55-2835-209-23).
21. On helicopters with APU, 3800480-1 or 3800480-2, connect electrical connector to ignition unit (TM 55-2835-209-23).
22. On helicopters with APU, 116305-100 through 116305-300 series, connect electrical connector to ignition exciter (TM 55-2835-208-23).
23. On helicopters with APU, 116305-100 through 116305-300 series, drain accumulated fuel from combustor fuel drain (TM 55-2835-208-23).
24. On helicopters with APU, 3800480-1 or 3800480-2, drain accumulated fuel from orifice fitting (TM 55-2835-209-23).
25. Start and operate APU for 5 minutes (TM 1-1520-237-10).

### Engines

1. Remove and stow engine inlet and exhaust plugs (WP 1677 00).
2. Depreserve engine (TM 1-2840-248-23).

### Inspection Following Activation From Intermediate Storage

1. Check aircraft log book for record of components removed or disconnected. Check that these components have been installed or connected.
2. Check that all procedures required to activate helicopter from intermediate storage have been done.
3. Check that all PRESERVED tags have been removed.
4. Check that aircraft log book entries have been posted for helicopter, engines, and APU.
5. Do a Preventative Maintenance Daily Inspection (TM 1-1520-237-PMD).

**END OF WORK PACKAGE**

**UNIT LEVEL**

**WEIGHT AND BALANCE**

**This WP supersedes WP 1746 00, dated 17 April 2006.**

**INITIAL SETUP:**

NA

## GENERAL INFORMATION

### Scope

**WARNING**

Sound pressure levels in and around this helicopter can cause permanent hearing loss. Hearing protection devices are required to be worn by all personnel in and around the helicopter during operation of main engine and/or auxiliary power unit (APU).

This work package contains descriptive information and procedures for helicopter weighing and loading. This information supersedes the Chart E (Loading Data and Special Weighing Instructions) placed in the individual aircraft weight and balance files by the aircraft manufacturer. The Chart E in the individual aircraft file is no longer required. The Chart E should be removed from the file and destroyed.

## SPECIAL WEIGHING INSTRUCTIONS

### Aircraft Condition

The Basic Weight condition is established with:

- Pilots access doors closed.
- Cargo doors closed.
- Gunners window closed.
- All main rotor pylon panels closed.
- Engine cowlings closed.
- Nose compartment door closed.
- Main and tail rotor blade in flight position and equally spaced.
- Vertical tail in flight position.
- Horizontal tails in flight position (level).
- Unusable and trapped fuel and oil.
- Pilot and Copilot seat in most aft position.
- Trackable swivel seats in most aft position, facing forward, seat back in upright position.
- Aft left-hand ceiling soundproofing panel, removed and replace inside the cabin at approximately the same station location.

**SPECIAL WEIGHING INSTRUCTIONS** - Continued

- Usable fuel (Full).

If the aircraft is weighed with dry fuel and oil systems, usable oil and unusable and trapped fuel and oil shall be added to the ″As Weighed″ condition.

## FUEL DRAINING OF MAINT TANKS

### Suction Equipment Method

1. Defueling is accomplished as follows:
   a. If required, prime fuel system including APU line to insure that fuel lines contain fuel.
   b. Attach suction hose to the pressure fuel adapter located on the right side of the aircraft at STA 431.0.
   c. Defuel with power equipment. Suction equipment will remove all but a small amount of residual fuel.
   d. Drain residual fuel from each cell in the following manner:
      (1) Turn of all electrical power.
      (2) Open the sump drain valves at the lower fuselage at STA 421.0 and WL 203.0 and drain residual fuel.
2. Fuel remaining aboard after these defuel procedures is trapped fuel and is included in the aircraft basic weight.

### Sump Drain Method

Fuel can also be drained through the sump drain valves at STA 421.0 and WL 203.0 by attaching a 1.25-inch diameter hose to the sump drain valve probe. Open drain valve and direct fuel into a container.

### External Fuel Tanks

Fuel can be drained from the external tanks by inserting a suction hose into the refuel port and sucking fuel from the tank, or gravity defuel by opening the sump drain valve.

## OIL DRAINING

Engine oil is part of Basic Weight on the UH-60A, UH-60L, EH-60A,HH-60A, and HH-60L. Consequently, the helicopter should be weighed with full engine oil. However, if it is desired to drain the oil, provisions have been made for draining while the engine is in a horizontal position, 15 degrees nose up, and 20 degrees nose down. The integral oil tank drain plug is located on the forward lower side of the tank.

## LEVELING DEVICE

The plumb bob suspension point is located just inside the left hand cargo door at STA 309.62, WL 258.5, at BL 35.0. The plumb bob target (leveling plate) is located on the cabin floor WL 206.815 directly below the suspension point (Figure 2).

## FORWARD REACTION LOCATION

The forward jack points are located under the forward fuselage at STA 247.0 and BL 43.7 (right and left). Place the weighing cell on the jack and place under the forward jack points. Extend jack (simultaneously with aft jack) until plumb bob reaches the level datum on the target.

## AFT REACTION LOCATION

The aft jack point is located under the fuselage at STA 605.3 and BL 0.0. Proceed in the same manner as with the forward reactions.

## AIRCRAFT LEVELING

Raise the helicopter to the level position by extending all jacks simultaneously until all tires are clear of the ground. Adjust jacks as necessary to attain a level attitude in fore, aft and lateral directions. After weighing, lower jacks simultaneously until all tires contact the ground in the static position.

## ALTERNATE WEIGHING

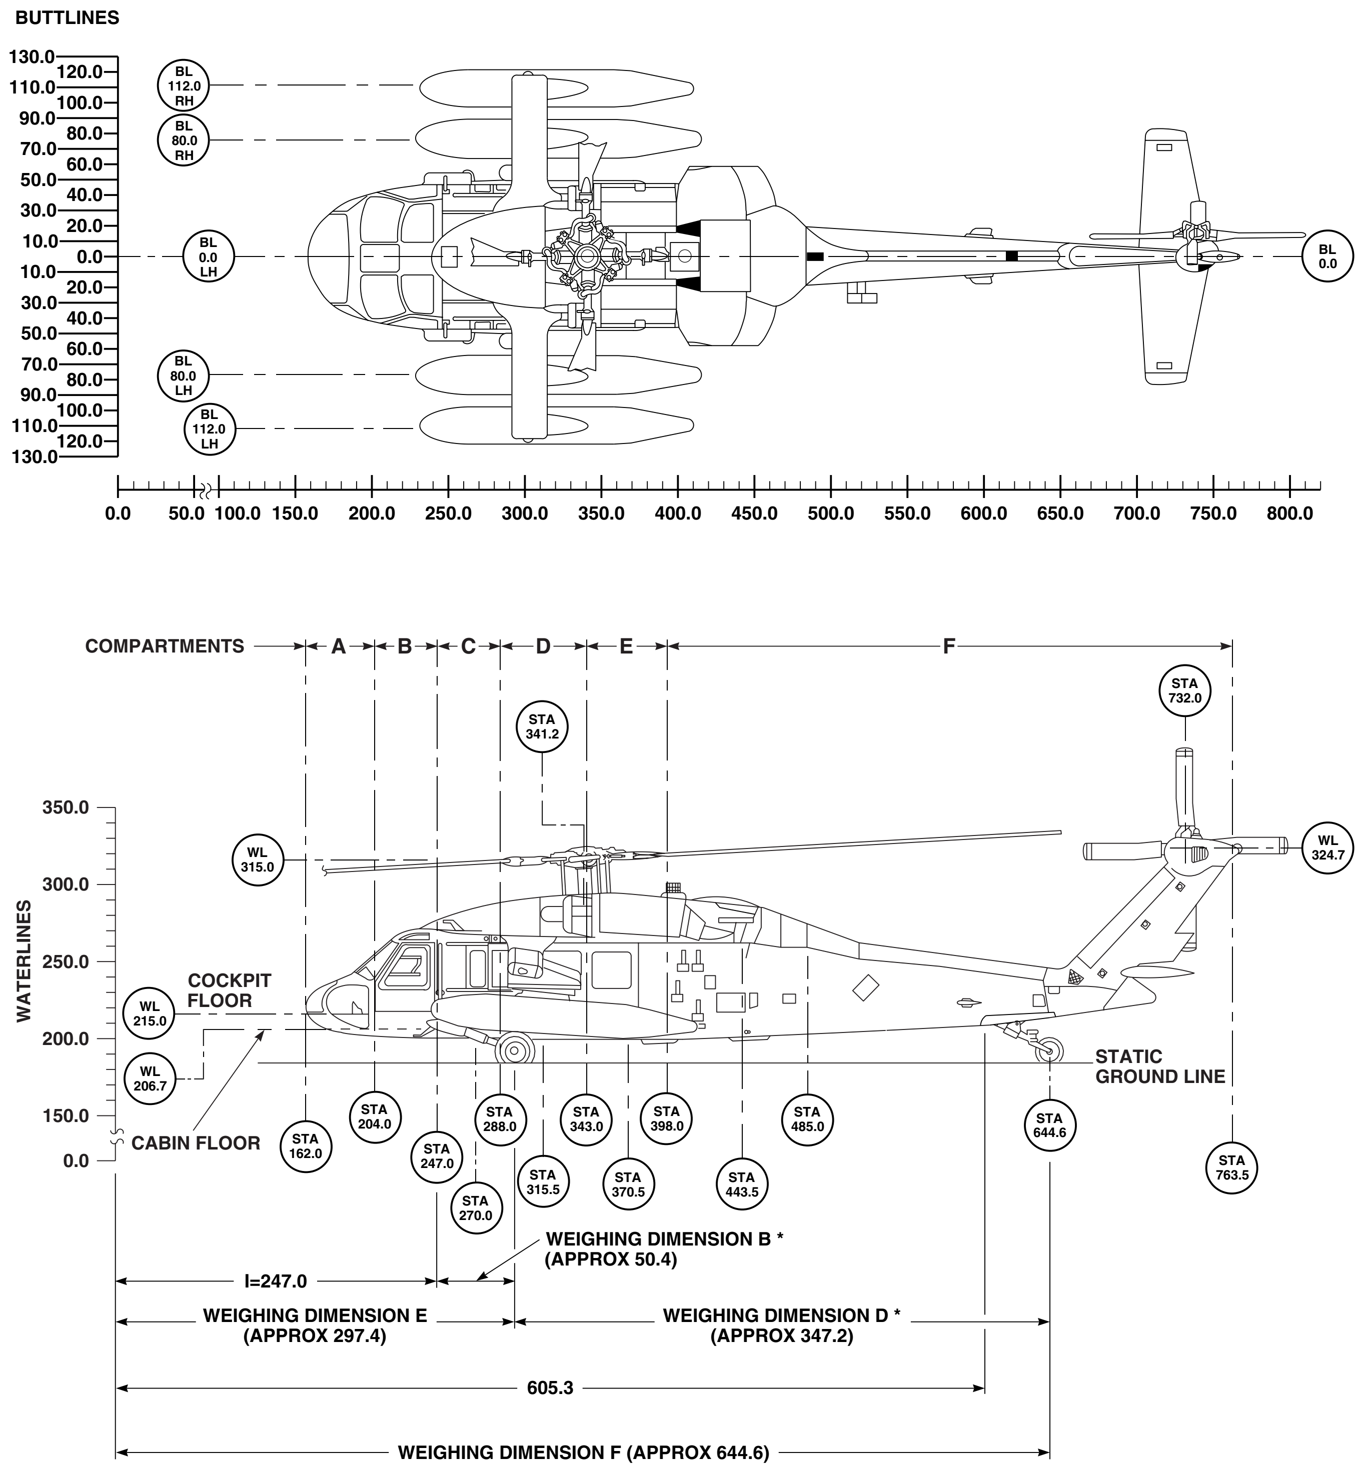
When weighing on wheels, measure dimensions B and D during weighing and after leveling. Using these actual dimensions, and the forward jack point dimension I (STA 247.0), determine dimensions E and F. For checking purposes, approximate dimensions for E and F are given below:

Dimension E - Reference Datum to Center Line of Main Wheels 297.4-inches.

Dimension F - Reference Datum to Center Line of Tail Wheel 644.6-inches.

## ALTERNATE WEIGHING - Continued

### AIRCRAFT DIAGRAM



**NOTES:**

1. (1) INDICATES THE APPROXIMATE WEIGHT AND MOMENT FOR FULL 230 GAL. FUEL TANK USING JP−4 AT 6.5 LBS PER GALLON.
2. (2) INDICATES THE APPROXIMATE WEIGHT AND MOMENT FOR FULL 230 GAL. FUEL TANK USING JP−5 AT 6.8 LBS PER GALLON.
3. (3) INDICATES THE APPROXIMATE WEIGHT AND MOMENT FOR FULL 450 GAL. FUEL TANK USING JP−4 AT 6.5 LBS PER GALLON.
4. (4) INDICATES THE APPROXIMATE WEIGHT AND MOMENT FOR FULL 450 GAL. FUEL TANK USING JP−5 AT 6.8 LBS PER GALLON.
5. THE 450 GAL. TANKS ARE MOUNTED ON THE INBOARD STORE STATIONS ONLY.
6. THE WEIGHT AND MOMENT DATA SHOWN IS FOR A SINGLE STORE STATION. THIS DATA IS INDENTICAL FOR ALL FOUR STORE STATIONS FOR 230 GAL. TANKS, AND FOR TWO INBOARD STORE STATIONS FOR 450 GAL. TANKS.
7. THE ESSS KIT IS PART OF THE AIRCRAFT BASIC WEIGHT WHEN INSTALLED, AND IS ACCOUNTED FOR ON CHART C.

**TABLE OF MOMENTS FOR PERSONNEL MOVEMENTS**
**FOR TROOP ASSAULT AND MEDVAC MISSIONS**
**180 POUNDS PER PASSENGER**

| AIRCRAFT TYPE | UH–60A, UH–60L | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| COMPARTMENT | B | C | C | D | D | E | C | D/E |
| ROW | PILOT OR COPILOT | ROW 1 | ROW 2 | ROW 3 | ROW 4 | ROW 5 | ROW 6 (MEDEVAC) | ROW 7 (LITTERS) |
| ARM (INCHES) | 227.1 | 262.0 | 282.0 | 320.7 | 339.8 | 387.2 | 270.8 | 343.6 |
| MOMENT / 1000 FOR ONE 180 LB PERSON | 41 | 47 | 51 | 58 | 61 | 70 | 49 | 62 |
| ROW | CHANGE IN MOMENT/1000 | | | | | | | |
| ROW 7 (LITTERS) | 21 | | | | | | 13 | |
| ROW 6 (MEDEVAC) | 8 | | | | | | | |
| ROW 5 | 29 | 23 | 19 | 12 | 9 | | | |
| ROW 4 | 20 | 14 | 10 | 3 | | | | |
| ROW 3 | 17 | 11 | 7 | | | | | |
| ROW 2 | 10 | 4 | | | | | | |
| ROW 1 | 6 | | | | | | | |

**NOTE:**

ADD MOMENT CHANGE, PLUS (+) SIGN, FOR PASSENGER MOVEMENT AFT. SUBTRACT MOMENT CHANGE, MINUS (–) SIGN, FOR MOVEMENT FORWARD.

EXAMPLE 1 – PASSENGER MOVES FROM ROW 1 TO ROW 5:
INTERSECT COLUMN "ROW 1" WITH LINE "ROW 5" AND READ CHANGE IN MOMENT / 1000 OF 23.
(USE PLUS (+) SIGN SINCE THIS IS A MOVEMENT AFT).

EXAMPLE 2 – PASSENGER MOVES FROM ROW 4 TO ROW 3:
INTERSECT LINE "ROW 4" WITH COLUMN "ROW 3" AND READ CHANGE IN MOMENT / 1000 OF 3.
(USE MINUS (–) SIGN SINCE THIS IS A MOVEMENT FWD).

NOTES:

(1) THE LIGHT SHADED AREAS MAY ONLY BE USED WHEN EXTERNAL STORES ARE INSTALLED.

(2) FORWARD AND AFT LIMITS SEE FIGURE 1–FOR FUSELAGE STATIONS.

(3) UH–60A, HH–60A AND EH–60A MAX GROSS WEIGHT CAN BE EXTENDED FROM 20250 LBS TO 22000 LBS ONLY WHEN IAS AND MWO 50–58 ARE INSTALLED.

(4) THE DARK SHADED AREAS MAY ONLY BE USED FOR ESSS FERRY MISSIONS. AN AIRWORTHINESS RELEASE IS REQUIRED FOR THIS MISSION.

| 255 | 66 | 82 | 89 | 96 | 75 |

**NOTE:**

(1) ARMS shown in inches from the reference datum.

(2) Weights used should include personnel equipment and clothing, litter weight to include 20 pounds for litter, and 5 pounds for splints, and blankets.

(3) Moments shown are per person.

(4) Swivel seat personnel CG's are shown for most forward and most aft locations with the seat facing forward and the seat back in the upright position. When the seat is Aft facing, and the seat back is in the upright position, the personnel CG moves 7.2 inches aft.

**END OF WORK PACKAGE**

# UNIT LEVEL

# WIRING

# GENERAL INFORMATION

**INITIAL SETUP:**
**References**
TM 55-1500-323-24

## GENERAL INFORMATION

### Scope

This work package contains data that is useful when troubleshooting wiring problems. If the wire number is known but the connectors are not, use the appropriate WIRE DATA LIST BY WIRE NUMBER work packages to determine the correct connectors (reference designator). Refer to, HOW TO USE WIRE DATA LIST BY WIRE NUMBER, in this work package. If the reference designator is known but the wire number is not, use the appropriate WIRE DATA LIST BY REFERENCE DESIGNATOR work packages to determine the correct wire number between connectors. Refer to, HOW TO USE WIRE DATA LIST BY REFERENCE DESIGNATOR, in this work package.

### Wire Identification Code

Refer to TM 55-1500-323-24.

### Circuit Designation Letters

Refer to TM 55-1500-323-24.

### Wire Type

Refer to TM 55-1500-323-24.

### How To Use Wire Data List By Wire Number

If wire number is known but connections are not, enter the WIRE DATA LIST BY WIRE NUMBER. This condition could occur if a wire within a harness breaks. The first column lists the wire number alphanumerically. For example: ARN123-74A24 comes before ARN89-10A24. The next two columns, titled FROM REFERENCE DESIGNATOR and TO REFERENCE DESIGNATOR, are interchangeable in that they reflect termination (end) points for any specific wire segment. The WIRE TYPE column lists the number for the specific wire. The MODEL EFFECTIVITY FROM/TO column lists the effectivity for each wire segment. If a note is referenced to in the MODEL EFFECTIVITY FROM/TO column, refer to the NOTES listing at the end of each chapter.

### How To Use Wire Data List By Reference Designator

If reference designator is known but wire number is not, enter the WIRE DATA LIST BY REFERENCE DESIGNATOR. This condition could occur if a terminal block is damaged and a new one is required. The DESIGNATOR column lists reference designators alphanumerically. For example: GG33-6 comes before GG7-4. The list is redundant in that it repeats the wire address. For example: The wire list indicates P150R-A has wire number 2ARC114-4E20 which connects to SGR10-8. Entering the list at SQR10-8 shows wire number 2ARC114-4E20 connecting to P150-A. The WIRE NUMBER column lists that segment of the wire connected to the reference designator specified in the REFERENCE DESIGNATOR column. The TO REFERENCE DESIGNATOR column indicates the destination of the specific wire segment. The CABLE/HARNESS PART NUMBER column lists the part number of the cable or harness assembly that the wire segment is a part of. The MODEL EFFECTIVITY FROM/TO column lists the effectivity for the specific wire segment. If a note is referenced to in the MODEL EFFECTIVITY FROM/TO column, refer to the NOTE LISTING at the end each section.

**GENERAL INFORMATION** - Continued

### Wire Repair

Refer to TM 55-1500-323-24.

### Kapton-Insulated Wiring

The outer jacket, of this type wire, is dark yellow and provides a surface for wire identification. Under the dark-yellow jacket is the copper-colored Kapton insulation. Beneath the insulation is the silver-coated electrical wire. If the outer jacket wears or peels the copper-colored insulation may become visible. Wire replacement is required if the insulation is damaged and/or the electrical wire is exposed. Kapton-insulated wires will no longer be used.

### Shield Wire Identification

In each of the ″HELICOPTER WIRING DATA BY REFERENCE DESIGNATOR″ sections, the shield wiring is identified as follows:

1. An asterisk preceding the wire number in the WIRE NUMBER column.
2. A dash ″-″ in the TO REFERENCE DESIGNATOR column.

NOTES:

1 HELICOPTERS SERIAL NOS 89-26149 AND 89-26154 ARE UH-60A HELICOPTERS MODIFIED TO UH-60L HELICOPTERS. HELICOPTER SERIAL NO. 89-26179 IS THE FIRST PRODUCTION UH-60-L.

**UH-60L HELICOPTERS SERIAL NO. 89-26149 THROUGH 96-26722 AND 96-26724 THROUGH 96-26737**
**WIRE DATA LIST BY WIRE NUMBER** - Continued

| WIRE NUMBER | FROM REFERENCE DESIGNATOR | TO REFERENCE DESIGNATOR | WIRE TYPE | MODEL EFFECTIVITY FROM/TO |
|---|---|---|---|---|

2 HELICOPTER SERIAL NO. 90-26272 IS THE TEST AIRFRAME FOR ELECTRO-MAGNETIC ENVIRONMENT PROTECTION (EME).

3 HELICOPTERS SERIAL NOS 90-26293 AND SUBQ, OR MODIFIED BY MWO 1-1520-237-50-59.

4 HELICOPTER SERIAL NO. 93-26505 IS THE TEST AIRFRAME FOR DIGITAL CLOCK. HELICOPTERS SERIAL NOS 93-26513 AND SUBQ HAVE THE DIGITAL CLOCK INSTALLED ON THE PRODUCTION LINE.

## ABBREVIATION

None Required

## END OF WORK PACKAGE

## ABBREVIATION

None Required

## END OF WORK PACKAGE

By Order of the Secretary of the Army:

PETER J. SCHOOMAKER
*General, United States Army*
*Chief of Staff*

Official:

JOYCE E. MORROW
*Administrative Assistant to the*
*Secretary of the Army*
0608623

DISTRIBUTION:
To be distributed in accordance with Initial Distribution Number (IDN) 313749, requirements TM 1-1520-237-23-12.

# These are the instructions for sending an electronic 2028

The following format must be used if submitting an electronic 2028. The subject line must be exactly the same and all fields must be included; however only the following fields are mandatory: 1, 3, 4, 5, 6, 7, 8, 9, 10, 13, 15, 16, 17, and 27.

From: “Whomever” <whomever@wherever.army.mil>
To: 2028@redstone.army.mil

Subject: DA Form 2028

1. From: Joe Smith
2. Unit: home
3. Address: 4300 Park
4. City: Hometown
5. St: MO
6. Zip: 77777
7. Date Sent: 19--OCT–93
8. Pub no: 55--2840--229--23
9. Pub Title: TM
10. Publication Date: 04--JUL--85
11. Change Number: 7

# The Metric System and Equivalents

***Linear Measure***

1 centimeter = 10 millimeters = .39 inch
1 decimeter = 10 centimeters = 3.94 inches
1 meter = 10 decimeters = 39.37 inches
1 dekameter = 10 meters = 32.8 feet
1 hectometer = 10 dekameters = 328.08 feet
1 kilometer = 10 hectometers = 3,280.8 feet

***Weights***

1 centigram = 10 milligrams = .15 grain
1 decigram = 10 centigrams = 1.54 grains
1 gram = 10 decigram = .035 ounce
1 decagram = 10 grams = .35 ounce
1 hectogram = 10 decagrams = 3.52 ounces
1 kilogram = 10 hectograms = 2.2 pounds
1 quintal = 100 kilograms = 220.46 pounds
1 metric ton = 10 quintals = 1.1 short tons

***Liquid Measure***

1 centiliter = 10 milliters = .34 fl. ounce
1 deciliter = 10 centiliters = 3.38 fl. ounces
1 liter = 10 deciliters = 33.81 fl. ounces
1 dekaliter = 10 liters = 2.64 gallons
1 hectoliter = 10 dekaliters = 26.42 gallons
1 kiloliter = 10 hectoliters = 264.18 gallons

***Square Measure***

1 sq. centimeter = 100 sq. millimeters = .155 sq. inch
1 sq. decimeter = 100 sq. centimeters = 15.5 sq. inches
1 sq. meter (centare) = 100 sq. decimeters = 10.76 sq. feet
1 sq. dekameter (are) = 100 sq. meters = 1,076.4 sq. feet
1 sq. hectometer (hectare) = 100 sq. dekameters = 2.47 acres
1 sq. kilometer = 100 sq. hectometers = .386 sq. mile

***Cubic Measure***

1 cu. centimeter = 1000 cu. millimeters = .06 cu. inch
1 cu. decimeter = 1000 cu. centimeters = 61.02 cu. inches
1 cu. meter = 1000 cu. decimeters = 35.31 cu. feet

# Approximate Conversion Factors

| ***To change*** | ***To*** | ***Multiply by*** | ***To change*** | ***To*** | ***Multiply by*** |
|---|---|---|---|---|---|
| inches | centimeters | 2.540 | ounce-inches | Newton-meters | .007062 |
| feet | meters | .305 | centimeters | inches | .394 |
| yards | meters | .914 | meters | feet | 3.280 |
| miles | kilometers | 1.609 | meters | yards | 1.094 |
| square inches | square centimeters | 6.451 | kilometers | miles | .621 |
| square feet | square meters | .093 | square centimeters | square inches | .155 |
| square yards | square meters | .836 | square meters | square feet | 10.764 |
| square miles | square kilometers | 2.590 | square meters | square yards | 1.196 |
| acres | square hectometers | .405 | square kilometers | square miles | .386 |
| cubic feet | cubic meters | .028 | square hectometers | acres | 2.471 |
| cubic yards | cubic meters | .765 | cubic meters | cubic feet | 35.315 |
