National Stock Number Listing		I-1
Alphanumeric Part Number Listing.....		I-9

SECTION I

INTRODUCTION

1. SCOPE.

This manual lists and authorizes spares and repair parts and other special support equipment required for the performance of organizational and bench level avionics maintenance of the S-70 helicopter. It authorizes the acquisition, issue, and disposition of spares, repair parts and special tools as indicated by the Source, Maintenance and Recoverability (SMR) codes.

2. GENERAL.

This Repair Parts and Special Tools List is divided into the following sections:

- A. Section II. Repair Parts List. A list of spares and repair parts authorized by this manual for use in the performance of maintenance. The list also includes parts which must be removed for replacement of the authorized parts. Parts lists are composed of functional groups in ascending numeric sequence, with the parts in each group listed in ascending item number sequence. Figure numbers are listed directly beneath the group header.
- B. Section III. Replaced and Alternate Parts Index. A list containing qualified alternate part numbers and replacement part numbers. This list is sorted in part number sequence.
- C. Section IV. Cross-Reference Indexes. A list, in National Item Identification Number (NIIN) sequence, of all national stock numbered items appearing in the listing, followed by a list in alphanumeric sequence of all part numbers appearing in the listings. National stock numbers and part numbers are cross referenced to each illustration figure and item number appearance.

3. EXPLANATION OF COLUMNS (SECTION II).

- A. Item No. (Column (1)). Indicates the number used to identify items called out in the illustration.
- B. SMR Code (Column (2)). The SMR code is a 5 position code containing supply/requisitioning information, maintenance category authorization criteria and disposition instructions, as shown in the following breakout.

- (1) Source Code. The source code tells you how to get an item needed for maintenance, repair, or overhaul of an end item/equipment. Explanations of source codes follow:

Source Code

Application / Explanation

PA
PB
PC
PD
PE
PF
PG

Stocked items: use the applicable NSN to request / requisition items with these source codes. They are authorized to the category indicated by the code entered in the third position of the SMR code.

NOTE:

Items coded PC are subject to deterioration.

KD
KF
KB

Items with these codes are not to be requested / requisitioned individually. They are part of a kit which is authorized to the maintenance category indicated in the third position of the SMR code. The complete kit must be requisitioned and applied.

MO – Made at org /
AVUM Level
MF – Made at DS /
AVIM Level
MH – Made at GS Level
MF – Made at Special-
ized Repair Act
(SRA)
MD – Made at Depot

Items with these codes are not to be requested / requisitioned individually. They must be made from bulk material which is identified by the part number in the description and usable on code (UOC) column. If the item is authorized to you be the third position code of the SMR code, but the source code indicates it is made at a higher category, order the item from the higher category of maintenance.

AO – Assembled by org /
AVUM Level
AF – Assembled by DS /
AVIM Level
AH – Assembled by GS
Category
AL – Assembled by SRA
AD – Assembled by Depot

Items with these codes are not to be requested / requisitioned individually. The parts that make up the assembled item must be requisitioned or fabricated and assembled at the category of maintenance indicated by the source code. If the third position code of the SMR code authorizes you to replace the item, but the source code indicates it is assembled at a higher category, order the item from the higher category of maintenance.

G377
SA

- XA – Do not requisition an "XA" coded item. Order its next higher assembly.
- XB – If an "XB" item is not available from salvage, order it using the CAGEC and part number given.
- XC – Installation drawing, diagram, instruction sheet, field service drawing, that is identified by manufacturer's part number.
- XD – Item is not stocked. Order an "XD" item through normal supply channels using the CAGEC and part number given, if no NSN is available.

(2) Maintenance code. Maintenance codes tell you the category of maintenance authorized to USE and REPAIR support items. The maintenance codes are entered in the third and fourth positions of the SMR code as follows:

- (a) The maintenance code entered in the third position tells you the lowest maintenance category authorized to remove, replace, and use an item. The maintenance code entered in the third position will indicate authorization to one of the following categories of maintenance.

Maintenance Code	Application/Explanation
O	- Organizational or aviation unit category can remove, replace, and use the item.
F	- Direct Support or aviation intermediate category can remove, replace, and use the item.
D	- Depot category can remove, replace, and use the item.

NOTE

- Complete repair: Maintenance capacity, capability, and authority to perform all corrective maintenance task of the "repair" function in order to restore serviceability to a failed item.
- Some limited repair may be done on the item at a lower category of maintenance, if authorized by the SMR codes of its detail parts.

- (b) The maintenance code entered in the fourth position tells whether or not the item is to be repaired, and identifies the lowest maintenance category with the capability to do complete repair (i.e., perform all authorized repair functions). This position will contain one of the following maintenance codes.

Maintenance Code	Application/ Explanation
O	- Organizational or aviation unit is the lowest category that can do complete repair of the item.
B	- Repair is limited to reconditioning by adjustment, calibration, lubrication or plating.
F	- Direct support or aviation intermediate is the lowest category that can do complete repair of the item.
D	- Depot is the lowest category that can do complete repair of the item.
Z	- Nonreparable. No repair is authorized.

(3) Recoverability code. Recoverability codes are assigned to items to indicate the disposition action on unserviceable items. The recoverability code is entered in the fifth position of the SMR code as follows:

Recoverability Code	Application/ Explanation
Z	- Nonreparable item. When unserviceable, condemn and dispose of the item at the category of maintenance shown in the third position of the SMR Code.
O	- Reparable item. When uneconomically reparable, condemn and dispose of the item at organizational or aviation unit category.
F	- Reparable item. When uneconomically reparable, condemn and dispose of the item at direct support or aviation intermediate category.
D	- Reparable item. When beyond lower category repair capability, return to depot. Condemnation and disposal of item not authorized below depot category.
A	- Item requires special handling or condemnation procedures because of specific reasons (e.g., precious metal content, high dollar value, critical material, or hazardous material). Refer to appropriate manual/ directives for specific instructions.

NOTE

Any NSN that is documented as *** N/A *** requires procurement by part number only.

- C. NSN (Column (3)). The NSN of the item is listed in this column.
- D. CAGEC (Column (4)). The CAGEC is a 5-character alphanumeric code which is used to identify the manufacturer, distributor, that supplies the item.
- E. Part Number (Column(5)). Indicates the primary number used by the manufacturer (individual, company, firm, corporation, or Government activity), which controls the design and characteristics of the item by means of its engineering drawings, specifications, standards, and inspection requirements to identify an item or range of items.

NOTE

When an NSN is used to requisition an item, the item received may have a different part number from the part ordered.

- F. Description and Usable on Code (UOC) (Column (6)). This column includes the following information:
 - (1) The item name and, when required, a minimum description to identify the item.
 - (2) Cross references to breakdown and Next Higher Assembly (NHA) figures.
 - (3) Part numbers for bulk materials are given in this column if the item is to be manufactured/fabricated.

NOTE

The statement "END OF FIGURE" appears just below the last item description in Column (6) for a given figure in Section II.

- G. QTY (Column (7)). Indicates the quantity of the item used in the breakout shown on the illustration figure, which is prepared for a functional group, subfunctional group, or an assembly.

4. EXPLANATION OF REPLACED AND ALTERNATE PARTS INDEX (SECTION III).

- A. If a stock item cannot be located in the Alphanumeric Part Number Index, it may be listed in the Replaced and Alternate Parts Index. Part numbers in this index are listed by Old Part Number in ascending alphanumeric

sequence. Each item in the index references the item number and the figure number where the New Part Number is located. The old or alternate part will also be identified in the Description and Usable On Code Column (Column 6).

- (1) Replaced Parts. Parts which have been assigned new part numbers due to engineering changes. In most cases either the old or the new part numbers may be used in the figures indicated.
- (2) Alternate Parts. Parts which have more than one source of supply.

5. EXPLANATION OF INDEX FORMAT AND COLUMNS (SECTION IV).

A. NSN Index.

- (1) Stock number column. This column lists the NSN by NIIN sequence. The NIIN consists of the last nine digits of the NSN. When using this column to locate an item, ignore the first four digits of the NSN. When requisitioning items use the complete NSN (13 digits).
- (2) Fig. column. This column lists the number of the figure where the item is identified/located. The illustrations are in numerical sequence in section II.
- (3) Item column. The item number identifies the item associated with the figure listed in the adjacent Fig. column. This item is also identified by the NSN listed on the same line.

B. Part Number Index. Part numbers in this index are listed by part number in ascending alphanumeric sequence.

- (1) Part number column. This column identifies the part number assigned to the item.
- (2) Fig. column. This column lists the number of the figure where the item is identified/located.
- (3) Item column. The item number is that number assigned to the item as it appears in the figure referenced in the adjacent figure number column.

6. SPECIAL INFORMATION.

- A. Assembly Instructions. Detailed assembly instructions for items source coded to be assembled from component spare/repair parts are found in TM 11-70-23. Items that make up the assembly are listed immediately following the assembly item entry, or reference is made to a figure which shows the breakdown of the items that make up the assembly.
- B. NSN. NSNs that are missing from 'P' source coded items will be added to this TM by future change/revision as they are established.
- C. UOC. UOC's shown in this manual are used to identify individual parts, or entire figures, having limited usage. Uncoded figures and items are applicable to all models. UOC's used in this manual are as follows:
 - (1) Entire figure. If one of the UOC's listed in the chart below appears in a figure title name and below the illustration, that figure in its entirety, has limited effectivity. The figure is applicable, for repair and maintenance, only to helicopters identified by the appropriate UOC.

NOTE

Some helicopters identified in the chart below have been upgraded during repair or maintenance. The logbooks, maintenance records and other documentation pertaining to an individual helicopter contain specific information about configuration variations from this manual.

- (2) Individual parts in general application figures. UOC's shown in this manual are used to identify individual parts having limited use within figures that otherwise apply to all helicopters. Uncoded figures and illustrations are applicable to all models. Identification of the usable on codes used in this manual are:

'USABLE ON CODE'

S70-I

S70-II

USED ON

83-23837 through 89-26178

89-26179 and subsequent

- D. Revised Data. Any data which has changed since the previous issue of this manual will be identified by an asterisk (*) preceding the item number. Revised data includes, but is not limited to the following:

- (1) New items added to a figure.
- (2) Resequencing the items of a figure.
- (3) Quantity changes.
- (4) Part number changes within a figure.
- (5) Revised item names.
- (6) Revised usable on codes or other descriptive information.

- E. SOURCE CODE "PR". An item that is source coded "PR" is a valid repair part only until current inventory supplies are exhausted. It is not to be reordered. The item that replaces it will be designated in the Description Column with "RPL-BY" followed by the designated replacement item's Part Number. Once the designated replacement item has been installed onto a helicopter, an item that is coded "PR" may not be used to replace it in a subsequent repair.

7. HOW TO LOCATE REPAIR PARTS.

A. When NSN or part number is not known.

- (1) Using the table of contents, determine the assembly group or subassembly group to which the item belongs. This is necessary since figures are prepared for assembly groups and subassembly groups, and listings are divided into the same groups.
- (2) Find the figure covering the assembly group or subassembly group to which the item belongs.
- (3) Identify the item on the figure and note the item number.
- (4) Refer to the Repair Parts List for the figure to find the part number for the item number noted on the figure.
- (5) Refer to the Part Number Index to find the NSN if assigned.

B. When NSN or part number is known.

- (1) Using the index of National stock numbers and part numbers, find the pertinent NSN or part number. The NSN index is in NIIN sequence (para 5a(1)). The part numbers in the part number index are listed in ascending alphanumeric sequence (para 5b). Both indexes cross-reference you to the illustration figure and item number of the item you are looking for.

- (2) After finding the figure and item number, verify that the item is the one you are looking for, then locate the item number in the repair parts list for the figure.
