

APPENDIX F**WIRING DATA****APPENDIX OVERVIEW**

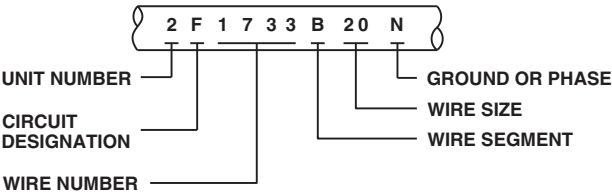

SECTION	TITLE	PAGE
F-1	GENERAL INFORMATION	F-2
F-2	S-70A-I HELICOPTERS WIRE DATA LIST BY WIRE NUMBER	F-9
F-3	S-70A-I HELICOPTERS WIRE DATA LIST BY REFERENCE DESIGNATOR	F-151
F-4	S-70A-II HELICOPTERS WIRE DATA LIST BY WIRE NUMBER	F-451
F-5	S-70A-II HELICOPTERS WIRE DATA LIST BY REFERENCE DESIGNATOR	F-603

F-1 GENERAL INFORMATION.

F-1.1 Scope.

This appendix is made up of three sections. Section I contains instructions on how to use the wire list and how to make general wiring repairs. Section II contains an alphanumeric listing of all wires in the helicopter by wire number. Section III contains an alphanumeric listing of all wires in the helicopter by reference designators. This appendix contains data that is useful when troubleshooting wiring problems. If the wiring number is known but the connectors are not, use the appropriate WIRE DATA LIST BY WIRE NUMBER sections to determine the correct connectors (reference designator). Refer to PARA F-1.5 for HOW TO USE WIRE DATA LIST BY WIRE NUMBER. If the reference designator is known but the wire number is not, use the appropriate WIRE DATA LIST BY REFERENCE DESIGNATOR sections to determine the correct wire number between connectors. Refer to PARA F-1.6 for HOW TO USE WIRE DATA LIST BY REFERENCE DESIGNATOR. There are certain identifiers assigned to helicopters which are used primarily as a means of accurate routing. Following are identifiers and their meanings.

- a. SG is a splice group.
- b. SA is a splice area.
- c. GND is a ground point.
- d. GG is a ganged ground.
- e. BOMB is an end cap.

FB2106
SA

FIGURE F-1-1. WIRE IDENTIFICATION CODE

- f. * is a shielded wire.
- g. *CBL is a shielded cable.

F-1.2 Wire Identification Code.

All wires in helicopters are identified in accordance with Military Specification MIL-W-5088. Identification is made by a series of letters and numbers. Figure F-1 shows an example of wire numbering.

F-1.3 Circuit Designation Letters.

The circuit designation letter indicates circuit function. Chart 1-1 lists circuit designation letters and circuit functions.

Chart 1-1. Circuit Designation Letters

CIRCUIT DESIGNATION	CIRCUIT FUNCTION	CIRCUIT DESIGNATION	CIRCUIT FUNCTION
A	Armament	M	Miscellaneous
C	Control Surfaces	N	Ground (used at end of wire no.)

Chart 1-1. Circuit Designation Letters (Cont)

CIRCUIT DESIGNATION	CIRCUIT FUNCTION	CIRCUIT DESIGNATION	CIRCUIT FUNCTION
D	Instruments (other than flight and engine)	P	DC Power
E	Engine Instruments	Q	Fuel and Oil
F	Flight Instruments	R	Radio (navigation and communication)
G	Landing Gear and Blade and Pylon Folding	S	Radar
H	Heating and Ventilating	T	Special Electronic
J	Ignition	V	DC Power or Control
K	Engine Controls	W	Warning and Emergency
L	Lighting	X	AC Power

F-1.4 Wire Type.

The WIRE DATA LIST BY WIRE NUMBER has a column titled WIRE TYPE. The numbers listed in this column fall into four major types. Numbers with an "M" prefix are MIL-W-types. For example: M22759 is MIL-W-22759. Numbers with "RG" prefix are RF coaxial types. For example: RG-180B/U is an RF coaxial cable per MIL-C-17. Numbers with a "WM" or "WF" prefix are per MIL-C-5898. Numbers with an "SS" prefix are shown in Figure F-2.

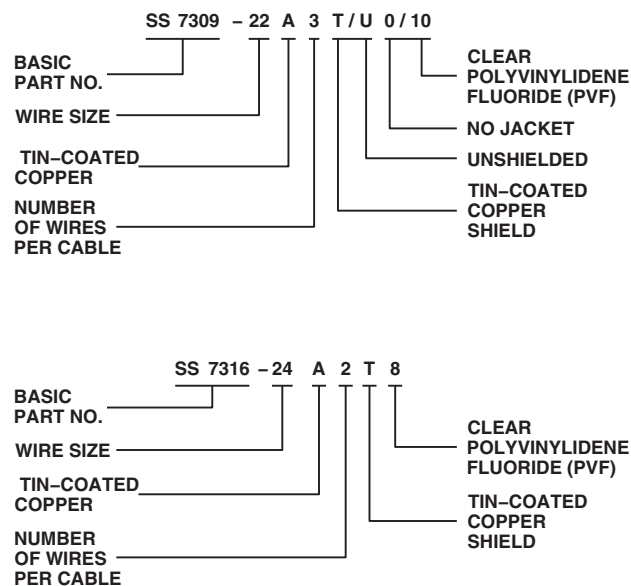

F-1.5 How To Use Wire Data List By Wire Number.

If wire number is known but connections are not, enter the WIRE DATA LIST BY WIRE NUMBER. This condition could occur if a wire within a harness breaks. The first column lists the wire number alphanumerically. For example: ARN123-74A24 comes before ARN89-10A24. The next two columns, titled FROM REFERENCE

DESIGNATOR and TO REFERENCE DESIGNATOR, are interchangeable in that they reflect termination (end) points for any specific wire segment. The WIRE TYPE column lists the number for the specific wire.

F-1.6 How To Use Wire Data List By Reference Designator.

If reference designator is known but wire number is not, enter the WIRE DATA LIST BY REFERENCE DESIGNATOR. This condition could occur if a terminal block is damaged and a new one is required. The DESIGNATOR column lists reference designators alphanumerically. For example: GG33-6 comes before GG7-4. The list is redundant in that it repeats the wire address. For example: The wire list indicates P150R-A has wire number 2ARC114-4E20 which connects to SGR10-8. Entering the list at SQR10-8 shows wire number 2ARC114-4E20 connecting to P150-A. The WIRE NUMBER column lists that segment of the wire

FB2107
SA**FIGURE F-1-2. SS WIRE TYPE IDENTIFICATION**

connected to the reference designator specified in the REFERENCE DESIGNATOR column. The TO REFERENCE DESIGNATOR column indicates the destination of the specific wire segment. The CABLE/HARNESS PART NUMBER column lists the part number of the cable or harness assembly that the wire segment is a part of.

F-1.7 Wire Repair.

Most connectors and receptacles used on helicopters have a blue band around them. This indicates that all sockets and pins are removed and inserted from the rear. This is done with a plastic tool. The removal portion of the tool is white and the insertion portion is color-coded for wire size. Tool color-coding is red and white for 20-gage wire, blue and white for 16-gage wire, and yellow and white for 12-gage wire. The removal/insertion procedure is as follows:

F-1.7.1 Remove

- With rear of insert toward you, snap white end of proper size double-ended plastic tool over wire of contact to be removed.
- Slide tool along wire into insert cavity until tool engages rear of contact and a positive resistance is felt.
- Press wire of contact to be removed against serrations of tool and pull both tool and contact wire assembly out of connector.

F-1.7.2 Install**NOTE**

Do not use force when inserting or removing pins or sockets. Make sure proper tool is used. Do not attempt to insert or remove wires from forward side of connector.

- Strip insulation from wire about 1/4 inch from end.
- Crimp pin or socket to wire with crimp-type hand tool.

NOTE

After crimping wire to pin or socket, make sure wire can be seen through inspection hole of contact.

- Hold colored half of correct size insertion/removal tool between thumb and forefinger and lay wire to be inserted along slot. Leave about 1/2 inch of wire showing. Snap wire into tool.
- Pull wire back through tool until tip of tool seats against shoulder of contact.
- Hold connector with backshell removed and rear insert facing you. Slowly push contact straight into connector insert. A firm stop will be felt when contact seats in connector insert.

- f. Release wire and pull out tool.

F-1.8 Preservation of Electrical Connectors, Receptacles, and Plugs.

- a. Turn off all electrical power (PARA 1-6-16).
- b. Disconnect electrical connector, P140, from battery (PARA 9-4-85).
- c. Disconnect electrical or coaxial connectors as required.

Cleaning compounds and solvents identified in this procedure may react with some encapsulants or plastics used to form wire harness tubing, wire coatings, conformal coatings, gaskets, and seals. Test on a small area for softening or other adverse reactions prior to general application.

- d. Electrical connectors require special attention when installed in areas such as landing gear, tail cone, tail pylon, and other areas which may be exposed to salt water or salt water-laden air. The following techniques will assist in limiting corrosion:
 - (1) Protect open connectors with protective caps and plugs or pressure sensitive tape.
 - (2) Special attention should be given to connectors using replaceable pins. These connectors use plastic inserts in unwired contact positions. These seal connectors against water intrusion. The repeated removal and replacement of contacts and omission of the plastic inserts may allow water entry.

F-1.9 External Corrosion Removal and Cleaning.

- a. Inspect connector and backshell for corrosion damage. If corrosion is heavy, connector and backshell may require replacing.

- b. Remove corrosion with abrasive mat, Item 14, Appendix D.
- c. Wipe residue with cleaning cloth, Item 102, Appendix D.
- d. Apply acetone, Item 25, Appendix D with acid brush, Item 84, Appendix D.
- e. Remove residue with cleaning cloth, Item 102C, Appendix D.

F-1.10 Internal Corrosion Removal and Cleaning.

- a. Apply acetone, Item 25, Appendix D with acid brush, Item 84, Appendix D.
- b. Remove extra solvent and residue with clean cloth.

F-1.11 Water Displacement and Preservation.

- a. Anytime connectors are separated for maintenance, preserve as follows:

NOTE

The application of corrosion preventive compound, Item 114, Appendix D, will assist in displacing any moisture present in connector internal sections.

- (1) Apply light film of corrosion preventive compound, Item 114, Appendix D, to internal sections of plugs and receptacles. Avoid excessive application of preservative.
- (2) Tilt plug or receptacle down if possible, to drain excess. Wipe off extra preservative with clean cloth, Item 102, Appendix D.
- (3) Before connecting threaded sections of connector, plug or receptacle backshells, lubricate threaded area with corrosion preventive compound, Item 114, Appendix D.
- (4) Preserve outer shell of connectors, plugs, and receptacles with a thin coating of cor-

rosion preventive compound, Item 114, Appendix D.

F-1.12 Coaxial Connectors.

- a. Coaxial connectors require special steps in order to avoid water intrusion. In most cases moisture, contaminants, and corrosion in fuel quantity and similar capacitive-type connectors will cause erroneous quantity indications in the cockpit indicating systems. Antenna coaxial connectors have similar moisture problems.
- b. Clean coaxial connectors as follows:
 - (1) Disconnect connector sections.
 - (2) Remove corrosion with abrasive mat, Item 14, Appendix D. Wipe residue with cleaning cloth, Item 102, Appendix D.
- c. Clean connector sections by spraying internal and external connector areas with acetone, Item 25, Appendix D. Use acid brush, Item 84, Appendix D, to clean interior connector sections.
- d. Wipe extra solvent with clean cloth, Item 102, Appendix D.

CAUTION

Do not apply corrosion preventive compound to internal areas of coaxial connectors. Application of preservatives to internal sections of coaxial connectors may cause erroneous indications in system performances.

- e. Assemble connector sections and preserve external areas of connectors with thin coating of corrosion preventive compound, Item 114, Appendix D.

with some encapsulants or plastics used to form wire harness tubing, wire coatings, conformal coatings, gaskets, and seals. Test on a small area for softening or other adverse reactions prior to general application.

- a. When corrosion is found at pin to wire connection on electrical connectors, wire harness and cables should be inspected for corrosion and cracking of wire insulation. Coaxial cable shielding is particularly susceptible to corrosion. Clean wire harnesses and cables as follows:
 - (1) If corrosion is apparent at back of a connector it may be necessary to remove an inch or two of wire harness cable cover to inspect for corrosion.
 - (2) Apply acetone, Item 25, Appendix D, with acid brush, Item 84, Appendix D. Scrub affected area until contaminants are loosened. Reapply acetone to flush area.
 - (3) Shake extra solvent from wire harness and wipe with clean cloth, Item 102, Appendix D.
 - (4) Allow to air dry.
 - (5) Preserve exposed wire as follows:
 - (a) Apply a light film of corrosion preventive compound, Item 114, Appendix D.
 - (b) On bare wire or shielding it may be necessary to use a heavier application of preservative. In this case, spray a light film of corrosion preventive compound, Item 114, Appendix D.
 - (c) Where applicable, repair wire harness and cable covering.

F-1.13 Wire Harnesses and Cables.

CAUTION

Cleaning compounds and solvents identified in this procedure may react

F-1.14 Kapton-Insulated Wiring.

KAPTON-INSULATED WIRING SHALL NOT BE USED.

F-1.15 Shield Wire Identification.

- a. In each of the "HELICOPTER WIRING DATA BY REFERENCE DESIGNATOR" sections, the shield wiring is identified as follows:

- (1) An asterisk preceding the wire number in the WIRE NUMBER column.
- (2) A dash "-" in the TO REFERENCE DESIGNATOR column.
